

# City of Toronto Bicycle/Motor Vehicle Collision Study

This map shows the locations of all the reported "dooring" incidents included in the study (1997-1998).

## **"Dooring" incidents:**

- **are the most frequent type of car-bike collisions in the downtown core.**
- **cause more severe injuries than most other types of collisions.**
- **can kill a cyclist if they are knocked down in traffic.**

**Look for bikes before opening your car door.**
