

Compact fluorescent bulbs

Fluorescent tubes and compact fluorescent lamps/compact fluorescent light bulbs (CFLs) contain small amounts of mercury.

Safe disposal

You can help save the environment by safely disposing of your used fluorescent tubes and CFLs:

- Keep them out of your recycling and garbage.
- Take them to a Drop-off Depot that accepts Household Hazardous Waste or to a Community Environment Day.
- Your building may have a disposal place for CFLs. Ask your building manager.
