

Authors: Loren Vanderlinden¹, Kathleen Cooper², Vanita Sahni¹, and Monica Campbell¹
¹Toronto Public Health, Environmental Protection Office
²Canadian Environmental Law Association

Technical Basis: The children’s environmental health issues summarized in this report are derived from the technical study entitled, *Environmental Threats to Children: Understanding Risks, Enabling Prevention*, prepared for Toronto Public Health by Kathleen Cooper of the Canadian Environmental Law Association in collaboration with: Loren Vanderlinden, Vanita Sahni, Ronald Macfarlane, Franca Ursitti and Monica Campbell from Toronto Public Health; Kim Perrotta, Ontario Public Health Association; and Barbara McElgunn, Learning Disabilities Association of Canada.

Acknowledgements: We gratefully acknowledge the expert review and insightful advice by the following individuals: Sarah Gingrich, Ronald Macfarlane, Jill McDowell, Carol Mee and Dr. Fran Scott all of Toronto Public Health.

We also gratefully acknowledge Heather Auld of Environment Canada for enabling funding support to this project.

The authors gratefully acknowledge the technical and policy expertise provided by members of the Project Advisory Committee including:

Charlene Bain, Toronto Public Health
Dianne Chopping, Toronto Public Health
Alicia Lowe, Toronto Public Health
Wil Ng, Toronto Public Health
Rita Paul-Sengupta, Toronto Public Health
Ann Pagnin, Toronto Children’s Services
Richard Christie, Toronto District School Board
Marc Goldman, Parents Environmental Network
Myla Moretti, Motherisk, Hospital for Sick Children
Dr. Lynn Marshall, Environmental Health Clinic, Sunnybrook and Women’s College Hospital Health Sciences Centre
Dr. Brian Gibson, LAMP Occupational Health Centre and formerly of the Ministry of Health and Long-term Care
Ann Phillips, South Riverdale Community Health Centre
Tammy Decarie, Access Alliance Community Health Centre
Deborah Brooker, Ontario Ministry of Environment

We acknowledge the funding support of Environment Canada – Toronto Region and the Ontario Ministry of the Environment, which made the technical study summarized here possible. The views expressed herein are those of the authors and Toronto Public Health and do not necessarily represent the views or official policy of the funders or organizations represented on the Project Advisory Committee.
