

TABLE OF CONTENTS

| | |
|--|----|
| INTRODUCTION | 1 |
| Climate, Weather and Air Quality. | 1 |
| Assessment of the adverse health effects of both severe weather events and air pollution. | 2 |
| OBJECTIVES | 3 |
| STUDY DESIGN | 4 |
| Trends in the data | 7 |
| Synoptic Climatology | 7 |
| METHODS AND RESULTS | 9 |
| The “How” of Synoptic Weather Typing (in this study) | 9 |
| Principal Component Analysis | 9 |
| Average Linking Clustering Procedure | 10 |
| Discriminant Function Analysis | 11 |
| Weather-type verification | 12 |
| The Link between Weather Types and Air Pollution | 12 |
| <u>Outcome of this step</u> | 13 |
| Trends in the data. | 14 |
| Mortality | 14 |
| Air Pollution | 14 |
| <u>Air mass classification: an important new dimension</u> | 16 |
| Elevated mortality associated with weather and air pollution | 16 |
| City-to-city comparisons | 17 |
| Air pollution results specific to Toronto | 17 |
| <u>Day-by-day assessment and modelling of mortality by air-mass</u> | 17 |
| Development of Air Pollution “day-to-day” Prediction Models | 18 |
| Regression analyses on elevated mortality | 19 |
| <u>Outcome of this step</u> | 20 |
| Elevated Mortality Prediction Models from Multiple Regression Analysis | 21 |
| Results from Snowfall and Freezing Rain Impacts on Elevated Mortality | 22 |
| <u>Potential Impacts of Climate Change on Elevated Mortality</u> | 23 |
| Statistical Downscaling Methods | 23 |
| Steps in downscaling | 24 |
| Impact of climate change on air pollution | 24 |
| Heat-Health Warnings | 25 |
| Heat-related elevated mortality | 26 |
| Air pollution related elevated mortality | 26 |

| | |
|---|----|
| LIMITATIONS AND UNCERTAINTIES | 27 |
| CONCLUSIONS | 28 |
| A New State of the Art of Burden of Illness Estimation | 28 |
| Toronto Mortality from Extreme Weather and Air Pollution. | 28 |
| Development of the Heat-Health Warning System for Toronto. | 29 |
| Climate Change, Extreme Temperature-related Weather Events and Air Pollution Episodes . | 29 |
| Heat “alerts” and associated hot-weather mortality | 30 |
| Air pollution-related elevated mortality | 30 |
| Acute mortality by the 2080s due to extreme weather and air pollution | 30 |
| IMPLICATIONS | 30 |
