

Transit Improvements on Sheppard Avenue East

The Government of Canada, Province of Ontario and City of Toronto are bringing improved transit to North York and Scarborough. The Sheppard East LRT is a 12km light rail transit project that will bring exciting improvements to public transit across the Sheppard East corridor. Construction activities have started to build a convenient connection with GO Transit at the Agincourt GO station.

The Sheppard East LRT will be completed and service will begin in 2014. This project will transform Sheppard East and provide transit users with many improvements:

- Reliable and fast service
- Elimination of delays experienced by buses that operate in mixed traffic
- Low floor accessible vehicles with barrier free access
- Higher operational speeds of 50-60km per hour
- Increased passenger capacity to reduce crowding
- A convenient fare collection system and all door loading that speeds up passenger boarding
- An integrated underground connection from just west of Consumers Rd to the Sheppard Subway at Don Mills Station

The Sheppard East LRT will:

- increase passenger capacity, comfort and transit reliability
- decrease commute times
- reduce reliance on cars
- conserve energy
- improve air quality
- create jobs in the construction and related trades industry
- support economic development
