Ms. Marilyn Toft Clerk, City of Toronto 100 Queen Street West Toronto M5H 2N2

Dear Ms. Toft:

Re: Toronto City Council Meeting, February 2 & 3, 2021

MM28.21 Calling on the Province to Phase-Out Gas-Fired Electricity Generation

Please distribute this letter to the members of Toronto City Council.

I am writing in support of Councillor Jennifer McKelvie's and Councillor Mike Layton's motion calling on the Province of Ontario to phase-out all gas-fired electricity generation as soon as possible.

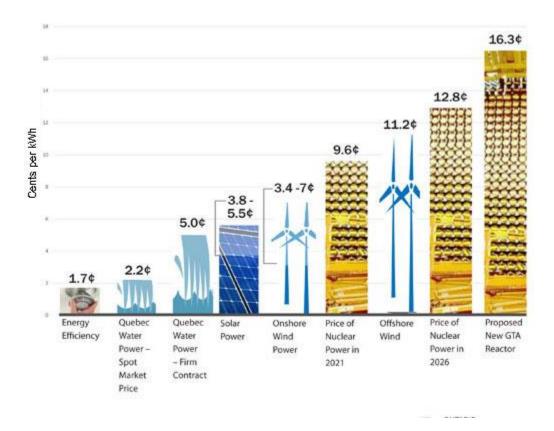

We would like to bring the following facts to the attention of City Council.

- According to the Independent Electricity System Operator's *Annual Planning Outlook* (December 2020), the greenhouse gas (GHG) pollution from Ontario's electricity generation fleet is expected to rise in the coming years as the province increasingly relies on gas-fired power plants to help meet our electricity demand.
- Increased reliance on gas-fired power plants to generate electricity will increase GHG pollution from the electricity sector by more than 300% by 2030 and by more than 400% by 2040.
- This will decrease the benefits achieved by the phase-out of our coal-fired electricity plants. We could lose more than one-third of the emission reductions gained by phasing out coal if we increase use of gas-fired generation in the years ahead.
- To ensure that municipalities, including the City of Toronto, are able to meet their GHG reduction targets, Ontario's electricity grid must become carbon-free.

There are three cost-effective options to phase-out gas-fired electricity generation:

- o Focus on energy efficiency activities;
- o Increase the amount of clean hydro-electric power imported from Quebec; and
- Increase wind and solar energy.

As the graphic below indicates all of the above-noted options are now lower cost than Ontario Power Generation's current price of nuclear electricity.

In conclusion, we urge Toronto City Council to pass Councillor McKelvie's and Layton's motion to help ensure that the City of Toronto will be able to meet its net zero GHG goals and to build back better, greener and more resilient.

Yours truly,

Jack Gibbons

Chair
