Ontario Disability related Data and COVID-19

Toronto Accessibility Advisory Committee Meeting June 13th, 2022

Hilary Brown, PhD, ICES Adjunct Scientist Yona Lunsky, PhD, ICES Adjunct Scientist Lesley Plumptre, PhD, ICES Staff Scientist

Today's Outline

Previous and ongoing COVID-19 related work in disability populations

COVID-19 related outcomes

COVID-19 vaccination uptake

- Where to find current resources
- Where to get more information

Applied Health Research Question (AHRQ) program

COVID-19 outcomes

UK Study: Mortality

Frequency of disability in the population

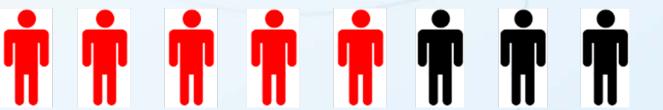

Frequency of disability in COVID-19 deaths

UK Office of National Statistics, 2021

ICES Study: Mortality

Hospitalization and mortality rates are higher for adults with developmental disabilities during the COVID-19 pandemic

People with intellectual and developmental disabilities, who are often in younger age groups, are being overlooked by vaccination strategies that prioritize older adults.

For adults with and without intellectual and development disabilities (IDD) in Ontario, researchers compared rates of COVID-19 positivity, hospitalization, ICU admission and mortality within 30 days of testing positively between January 2020 and January 2021.

Compared to adults without IDD:

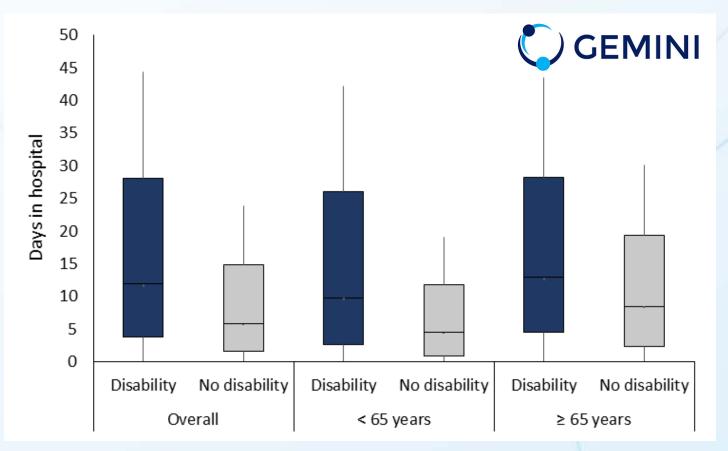

- COVID positivity rates were:
 - 1.3 times higher for adults with IDD.
 - 1.4 times higher for adults with Down syndrome
- Adults with IDD were 2 times as likely to be hospitalized with COVID-19 and to die.
- Adults with Down syndrome had mortality rates that were 6.6 times higher.

Lunsky et al. Dissolil Health J. 2021.

Gemini Study: Length of Stay

Gemini Study: Readmission

Survey Data: Broader Impact

Research Study: Survey on Disability and Reproductive Health during COVID-19 in Canada

Who?

You may be eligible if you:

- · Identify or may be identified as having a disability*
- · Identify as a woman, trans, or non-binary person
- · Are 18 years or older
- Live and receive health care in Canada

What?

- You will be asked to complete a survey about your reproductive health and the health care services you received since the beginning of the COVID-19 pandemic.
- You can do the study, or not do the study. The choice you
 make will not impact the services you use now or later.

How?

- The survey can be done by you online, by telephone or Zoom with a researcher at a time that works for you.
- If you need any supports or accommodations to participate, these will be provided.

What you share about your reproductive health experiences during COVID-19 will help make services better for other people during and beyond the pandemic.

You will receive a \$15 gift card to thank you for your time.

HOME/ DATA & ANALYTIC SERVICES/ APPLIED HEALTH RESEARCH QUESTION (AHRQ)/COVID-19 DASHBOARD

ICES COVID-19 Dashboard

This dashboard provides an overview of the sociodemographic and clinical characteristics of individuals who are eligible to receive COVID-19 vaccination in Ontario.

By linking COVID-19 vaccination data from the COVaxON provincial database to health and other administrative data from the ICES data repository, we describe below the demographic characteristics and medical histories of those who are eligible to receive a COVID-19 vaccine according to where they live, and the number of vaccine doses received.

The dashboard is updated on a monthly basis.

This work is supported by the Ontario Health Data Platform (OHDP), a Province of Ontario initiative to support Ontario's ongoing response to COVID-19 and its related impacts. The opinions, results and conclusions reported in this paper are those of the authors and are independent from the funding sources. No endorsement by the OHDP, its partners, or the Province of Ontario is intended or should be inferred.

Last updated: May 13, 2022 Next update: June 10, 2022 https://www.ices.on.ca/DAS/AHRQ/COVID-19-Dashboard#priority-groups

Any high-risk conditions

At least 1 dose: 96% At least 2 doses: 96% At least 3 doses: 87% At least 4 doses: 33%

Any at-risk conditions At least 1 dose: 93%

At least 1 dose: 93% At least 2 doses: 92% At least 3 doses: 79% At least 4 doses: 20%

Any risk conditions

At least 1 dose: 93% At least 2 doses: 92% At least 3 doses: 79% At least 4 doses: 20%

None of the listed conditions

At least 1 dose: 90% At least 2 doses: 89% At least 3 doses: 75% At least 4 doses: 16%

¹Validated algorithms and commonly used lists of codes were used to identify the presence of health conditions in ICES health administrative databases. Where possible, we aligned these conditions with the 'Phase 2: Individuals with Health Conditions' risk categories https://covid-19-ontarios-covid-19-vaccination-plan). Only individuals living outside of long-term care facilities are included. Individuals can be counted in >1 risk group. Individuals with a health condition who did not access health care services or otherwise do not meet the health administrative database disease case definition will not be counted.

DATA DOWNLOADS & REPORTS

- Vaccine coverage estimates as of May 8, 2022 for selected age groups by Forward Sortation Areas (FSAs)
- Full list of vaccine coverage estimates by priority groups, up to May 8, 2022.
- Vaccine coverage for adults with developmental disabilities, up to February 6, 2022.
- Report: Vaccine Coverage by Neighbourhood COVID-19 Risk in Immigrants, Refugees, and other Newcomers, up to April 26, 2021

TECHNICAL NOTES

- Data notes and caveats for ICES COVID-19 Dashboard.
- Terms of references for use of data from ICES COVID-19 Dashboard

Adults with a vision disability	87%	84%	
Without a vision disability	82%	77%	

Data as of September 26, 2021

ICES AHRQ: ODSP

Through the Applied Health Research Question (AHRQ), ICES has been providing COVID-19 related outputs to the Ministry of Children, Community and Social Services (MCCSS) throughout the pandemic.

Applied Health Research Question (AHRQ) program at ICES

- An AHRQ is "a question posed by a health system policy maker or provider in order to obtain research evidence to inform planning, policy and program development that will benefit the broader Ontario health system." – Ontario Ministry Of Health
- Previous and ongoing AHRQ projects are listed on the ICES website
- Eligible 'Knowledge Users' or Ontario based, publicly funded organizations may submit a request seeking data to inform health care planning, policy or evaluation.

Thank you
