

Guess where the oil from your driveway ends up?

Unfortunately, our sewer system doesn't come equipped with an oil filter. In fact, what runs off your driveway and our roads goes through our sewers and ends up in the lake. What's more, rainwater that runs off your lawn carries pesticides and pet waste to the lake as well. This waste contains E. Coli that can contribute to the pollution at Toronto's beaches.

Of course there's much we can all do, including eliminating or reducing pesticide use, repairing automobile leaks and picking up after our pets. For more information, or to receive your free stormwater pollution guide, call the waste and water line at 416-392-4546 or visit us online at www.city.toronto.on.ca/water.
