CITY OF TORONTO

BY-LAW 576-2017

To amend By-law 1105-2013 which authorized the undertaking of energy efficiency and water conservation works on private residential property as local improvements under the Residential Retrofit Program.

Whereas City Council previously enacted By-law 1105-2013 to authorize the undertaking of energy efficiency and water conservation works on private residential property as local improvements under the Residential Retrofit Program (the "Program"), which Program requirements were attached to the by-law as Appendix A; and

Whereas City Council has now adopted Item PE18.4 to enhance the Program by, among other things, amending the various requirements of the Program;

The Council of the City of Toronto enacts:

1. Section 1 of By-law 1105-2013 is amended to add "renewable energy technologies" by removing the current Section 1 in its entirety and replacing with the following amended Section 1:

   Council authorizes the undertaking of energy efficiency, renewable energy technologies, and water conservation works on private residential property as local improvements under the Residential Retrofit Program, as set out in Appendix A to this By-law, for the purpose of raising all or part of the cost of the work by imposing special charges on lots upon which all or some part of the local improvement is or will be located.

2. Appendix A to By-law 1105-2013 is removed and replaced with a new Appendix A, attached as Attachment 1 to this By-law.

3. This by-law is effective as of the date of enactment.

Enacted and passed on May 26, 2017.

Frances Nunziata, 
Speaker

Ulli S. Watkiss, 
City Clerk

(Seal of the City)
I. Single-Family Housing Program Stream

1.0. Overview

The Single-Family Stream of the Program supports homeowners of single-family properties across the City. The Program is designed to facilitate the installation of qualifying natural gas, electricity, renewable energy technologies and water conservation improvements and related energy assessments and then to secure payment by imposing a local improvement charge on the private residential property, as authorized by Ontario Regulation 596/06, as amended ("O. Reg. 596/06").

1.1. Objectives

The Program design will balance the need to attract participation and address the objective of enabling a higher incidence and depth of investment in single-family housing improvements to align with a number of City objectives to:
- increase the quality and durability of existing housing stock;
- address housing affordability by mitigating pressures on homeownership due to rising utility costs;
- realize economic development opportunities in connection with investments in retrofitting of houses, including industry development and job creation;
- achieve greenhouse gas emission reductions; and
- achieve a higher level of energy, water efficiency and conservation and renewable energy generation.

1.2. Program Eligibility

Residential low-rise buildings located within the City of Toronto of the following forms are eligible: detached, semi-detached, townhouse and more generally housing forms with fewer than seven units. The property must have a property tax account with the City of Toronto. Additionally, where the property owner anticipates seeking rebates from Toronto Hydro and/or Enbridge Gas in connection with this Program, the property must be a customer of the respective utility.

The maximum eligible funding amount for a property (inclusive of the cost of borrowing and an administrative charge) would be limited to the lesser of 10 percent of Current Value Assessment of the property or $75,000 per house.

Participation is voluntary, owner-initiated and subject to the following conditions:
- All registered owner(s) of the property must consent to participating in the Program;
- Property tax, utility bills and all other payment obligations to the City for the past five years must be in good standing; and
• Consent from all mortgage lenders, if the property is subject to one or more mortgages.

1.3. Home Energy Assessments

The City's Program will utilize the EnerGuide Rating System for homes (the "ERS") that provides a standard measure of a home's energy performance. It provides a standardized tool and process to assess home energy efficiency and can model energy savings and renewable energy generation projects.

The property owner must hire a Registered Energy Advisor (the "REA") - certified by Natural Resources Canada ("NR Can") - to perform pre- and post-retrofit assessments in accordance with ERS. REAs are experts in the field of energy efficiency and trained in the 'whole home' approach to home energy systems, technologies and products. The cost of the energy assessments are paid by the homeowner to the REA. Under the current Enbridge Gas incentive program, a homeowner is eligible for a rebate for the cost of an energy assessment (excluding HST) of up to $500 and an incentive up to $2,100 from Enbridge Gas should a homeowner complete a retrofit project and achieve a minimum natural gas savings (e.g. 25 percent natural gas reduction).

Upon completion of the pre-retrofit home energy assessment, a Renovation Upgrade Report with a home Energuide rating is provided to the homeowner along with recommendations for energy improvements that could potentially improve that rating. This report is to be provided to the City in order to access funding.

After the retrofit is complete, a second and final home energy assessment is performed by the REA to obtain a second EnerGuide home rating and to verify the completion of the improvements. Provided that the second assessment that the homeowner provides to the City indicates that the EnerGuide home rating has improved and the work has been completed, then the utility incentives (described in Section 1.8. – Access to Utility Rebates & Incentives) can be determined and the City can issue the final disbursement of funds, minus those incentive amounts.

1.4. Qualifying Energy Efficiency, Renewable Energy Technologies and Water Conservation Measures

The home energy assessment must demonstrate the potential to achieve cost-effective energy improvements in order to qualify for LIC funding. Funding is designated for capital costs (not maintenance costs) with an expected useful life of 5 years or greater and for measures that are permanently affixed to a property. The expected useful life of the improvements shall not exceed the LIC term selected by the homeowners.

Only the costs associated with improvements of up to the lesser of 10 percent of the Current Value Assessment of the property, or $75,000 are eligible for the Program.

A non-exhaustive list of the categories of improvements supported by the Program includes:

i. **Thermal envelope upgrades**: attic, wall and basement insulation, windows and doors, air-sealing.
ii. Mechanical systems: furnace and boiler replacement, air source heat pumps, ventilators, water heater replacement, thermostats and controllers, drain water heat recovery systems.

iii. Water efficiency: low-flow toilets and fixtures.

Ineligible measures include equipment or products not permanently affixed to the property, previously installed in another home and are deemed general maintenance. Incidental costs essential and integral to facilitate the energy improvements – such as electrical and plumbing upgrades, demolition and construction waste removal and environmental remediation – may be funded by the Program, subject to review and approval by the Program Manager.

By recommending categories of eligible improvements and associated measures, the City makes no guarantees of the materials, performance, cost-effectiveness or any warranty of the measures supported by the Program.

1.5. Completing the Retrofit through Contractor Engagement

The City will provide funding to homeowners for eligible measures covered by the Program that have been recommended by the REA, verified by the City, and installed by contractors hired by the property owner. The City will not pre-qualify contractors or procure contractors to perform energy assessments or install retrofit improvements on behalf of homeowners in connection with this Program. The homeowner will use the funds disbursed by the City to pay contractors directly. Note that none of the funding can be used for the REA, but utility rebates may be available for the energy assessment cost.

The City is not responsible for the work quality of any contractors hired in connection with this Program and assumes no liability for the works undertaken. All retrofit improvements and renovations must adhere to local codes and by-laws. The homeowner is responsible for ensuring that hired contractors are licensed, bonded, and insured. Any issues that may arise relating to the quality of workmanship or post-installation performance of energy measures, for example, should be dealt with by the property owner and contractor.

1.6. Application Process

The steps below outline the process and requirements homeowners need to follow as part of the Program. City staff will periodically review this process to ensure effective Program implementation and, where deemed appropriate, the City may make changes in its sole discretion.

Step 1: Pre-qualification

Homeowners submit an online or hardcopy pre-application form that includes, but is not limited to, the following information:

- Property assessment roll number to confirm no outstanding payments owed to the City in the last five years; and
Evidence of mortgage lender consent (where applicable).

If a homeowner has one or more outstanding mortgage(s) associated with the property, then the homeowner must obtain (at his or her own expense) consent from the mortgage lender(s) through a form that the City will provide. Property owners will advise their mortgage lender(s) of their intention to participate in the Program and receive permission from the lender(s) (perhaps up to only a specific dollar amount) as a requirement of the Program.

Once the property owner has been prequalified by City staff, based on the above criteria, the City will provide a Notice to Proceed to the homeowner.

**Step 2: Energy Assessment and Funding Request**

1. **Energy Assessment**
   The homeowner completes the pre-retrofit home energy assessment in accordance with Section 1.3 (Home Energy Assessments) and submits to the City the resulting Renovation Upgrade Report that the REA provides to the homeowner.

   That Renovation Upgrade Report must include:
   - the current NR Can EnerGuide home rating;
   - recommended improvements that have been customized for the home based on existing conditions which could potentially improve the EnerGuide home rating;
   - estimated energy cost savings that may be realized after installing the recommended improvements; and
   - potential eligibility for utility rebates and incentives offered by Independent Electricity System Operator, Toronto Hydro, Enbridge Gas, or other government sponsored programs.

2. **Funding Request Form**
   Along with the Renovation Upgrade Report, the homeowner also will need to submit a Funding Request Form that:
   - identifies the improvements that the property owner intends to install based on the Renovation Upgrade Report;
   - identifies the cost for each improvement (including equipment, materials, and labour costs) inclusive of HST; and
   - requests an initial disbursement (up to a maximum of 30 percent of the estimated cost of the work) from the City upon signing the POA.

Following receipt of the Funding Request Form, the City will:
- confirm the eligibility of the improvements (e.g. items affixed to property);
- verify the reasonableness of retrofit costs and labour costs by consulting manufacturer pricing and prevailing labour rates;
- calculate the administrative costs using a formula that apportions the cost to the City to operate this Program between participating properties as percentage of the cost of the work undertaken relative to the percentage of the cost of the work to the overall Program budget for each Program Stream; and
- estimate the eligible utility rebates and incentives available to the homeowner.
Step 3: Property Owner Agreement

After the City has confirmed the acceptability of the Renovation Upgrade Report and the Funding Request Form, the City will prepare a Property Owner Agreement ("POA") for the homeowner(s) to review and sign.

Step 4: Completing Improvements

1. Initial Funding Disbursement
Following execution of the POA, the City will provide the homeowner with the initial disbursement agreed upon in the POA to a maximum of thirty percent of the estimated cost of the work that can be used by the homeowner to pay contractors or suppliers (i.e. security deposit). Requests for initial disbursements will be evaluated on a case-by-case basis subject to the project information submitted by homeowners to the City. The Director, Environment and Energy Division of the City of Toronto has sole discretion in determining if an initial disbursement is warranted and determining the amount. The property owner will be contractually obligated to repay this initial disbursement, together with any applicable administrative fee, to the City if the property owner does not complete the improvements.

The property owner can then proceed with hiring contractor(s) and performing the approved improvements to the property. The improvements must be completed within a reasonable time frame, as stipulated in the POA, to be determined by the City in its sole discretion.

2. Final Funding Disbursement
As will be detailed in the POA, the City will provide the final disbursement only after the homeowner provides a copy of the EnerGuide home rating label from the REA that:

- includes a Certificate of Completion that attests the approved improvements having been installed and provides an EnerGuide rating of the house after the improvements have been completed which is better than the original EnerGuide rating; and
- indicates the actual costs and useful life for all the works.

Step 5: LIC Repayment

Following the City Treasurer's periodic certification of the local improvement roll, (which occurs after the improvements on a given set of properties are complete and the final amounts of funding are confirmed), the City Solicitor will submit a corresponding bill for Council to adopt a by-law pursuant to Section 35.14 of O.Reg 596/06 to impose the special charges on the participating properties. For each property included in the by-law, the Treasurer will then add to the City's tax roll for that property each year that portion of the imposed special charge that is due in that year. These collective steps will provide priority lien status for the annual amount that the Treasurer adds to the tax roll and will ensure that any subsequent property owner who was not a party to the POA is bound to pay that amount.

To facilitate repayment of the annual special charge, the POA will require homeowners to sign-up for the pre-authorized payment plan option of 11 monthly instalments similar to the existing Program for property tax payments.
At any time, a homeowner can make a one-time payment of the total outstanding amount owing to clear the property of the LIC charge. In this case, the outstanding funding amount and administrative fee becomes payable to the City. Failure to make payments is treated with the same remedy as uncollected property taxes which may include penalties and interest charges.

1.7. LIC Disclosure

As indicated above, the subsequent owner of a property on which the City has imposed a special charge is required to pay the City the annual LIC amount even though that subsequent owner was not a party to the original POA. In addition to a notice that the City will be giving in accordance with the provisions of O.Reg 596/06, the City also will take the following steps to ensure even greater transparency of the LIC to interested parties by:

i. posting on the City's website notice of the special charge by-law to impose the charge on the property in advance of its introduction and after its adoption; and

ii. updating the Tax Certificate to include the full LIC amount, amount payable in the current year, outstanding amounts owing and a note to reference the by-law pursuant to which the special charge was imposed.

1.8. Access to Utility Rebates and Incentives

The City plans to promote relevant offerings from Enbridge Gas and Ontario's independent Electricity System Operator (IESO) in the delivery of the Program to facilitate homeowner's access to incentives and promotions. Incentives are subject to change and availability.

i. Financial incentives to qualified homeowners provided by Enbridge Gas include:

a. Incentives for 25 percent – 49 percent annual gas savings totals $1,600: $150 instant rebate for the homeowner's first energy audit, plus $350 rebate covering the remainder of the energy audit costs, excluding HST, and $1,100 in a cash incentive.

b. Incentives for 50 percent annual gas savings, or above, totals $2,100: $150 instant rebate for the homeowner's first energy audit, plus $350 rebate covering the remainder of the energy audit costs, excluding HST, and $1,600 in a cash incentive.

c. Smart Thermostat incentive of $100

ii. Financial incentives to qualified homeowners provided by IESO include:

a. Incentive of $250 for replacing an existing furnace with a qualifying high-efficiency furnace with an Electronically Commutated Motor (ECM).

b. Incentive of $250 for replacing an existing central air conditioner with a qualifying ENERGY STAR certified system.
c. Incentive of $400 for replacing an existing central air conditioner with a qualifying stand-alone CEE 'Tier 2' level system.

The funding advances by the City will be net of any rebates or other incentives received by the homeowner, with the exception of rebates received to offset the costs of the energy assessment.

1.9. Quality Control

As a means of additional oversight to confirm that the funded improvements were completed, the POA will indicate that the City reserves the right to have a City official or third party contractor arrange with the property owner for an inspection. The property owner(s) is also responsible for keeping original copies of contractor invoices and photos of installed measures, especially for the CEA to verify measures like insulation, and be prepared to disclose this information to the City upon request.

1.10. Measurement and Verification

Via the POA, the property owner(s) must consent to providing the City with access to the property's utility usage data in order to monitor results and evaluate the Program's effectiveness for a period of five years after completion of the retrofit. Also, the property owner(s) agrees to participate in surveys and other follow-up activities to help the City evaluate the Program.

II. Multi–Residential Stream Program Design

2.0. Outline

The Multi-Residential Stream of the Program will reach out to residential rental apartment property owners across the City. The Program is designed to facilitate property owner participation by providing for the self-selection of contractors, a range and combination of retrofit measures that can be pursued and competitive financing terms.

2.1. Objectives

The Program design will balance the need to attract participation and address the objective of enabling a higher incidence and depth of investment in apartment building retrofits to align with a number of City objectives to:

- increase the quality of rental housing stock;
- address housing affordability by mitigating pressures on rent increases due to rising utility costs;
- realize economic development opportunities in connection with investments in retrofitting of apartment buildings, including industry development and job creation;
- achieve greenhouse gas emission reductions; and
- achieve a higher level of energy and water efficiency and conservation.
2.2. Program Eligibility

Rental apartment buildings located within the City of Toronto with three or more storeys and seven or more units would be eligible to apply to the Program. The property must have a property tax account with the City of Toronto. Properties that are not required to pay property taxes would be ineligible. Properties that have multiple single owners would not be eligible without commitment from all owners.

The maximum eligible funding amount for a property (inclusive of the cost of borrowing and an administrative charge) would be limited to the lesser of 10 percent of the Current Value Assessment of the property or $2,000,000 per building.

The City would require that participating property owners do not apply for Above Guideline Increases for retrofit measures completed through the Program.

Additional Program eligibility criteria would include:
- All registered owner(s) of the property must consent to participating in the Program;
- Property tax, utility bills and all other payment obligations to the City for the past five years must be in good standing; and
- Specification that the property owner will obtain independent legal and financial advice with respect to participation in the Program.

2.3. Outreach

Staff will work with a number of parties in order to build Program awareness and effectively engage participants in the Program. The Program will be available to eligible properties across the City with additional outreach focused in:
- Areas with a concentration of buildings with a preponderance of residents with low incomes – to maximize outcomes aligned with city objectives);
- Areas designated by City Council as Residential Apartment Commercial (RAC) pilot project areas as part of the City-Wide Zoning By-law implementation - to complement existing outreach activities in these areas maximizing Program delivery efficiencies (http://app.toronto.ca/tmmis/viewAgendaItemHistory.do?item=2013.PG21.1);

2.4. Building Energy Assessment

As part of the Program application process, the City will require property owners to have a building energy assessment (also referred to as an energy audit) completed by a qualified professional energy auditor that meets the eligibility criteria set out below. To ensure adherence to high professional industry standards, the City’s requirements for the energy assessment are aligned with the energy audit requirements outlined by Toronto Hydro for their incentive programs. This alignment will help to maximize opportunities for utility incentive funding for participating property owners.

To meet program eligibility requirements, the energy assessment and related report would need to be completed by a qualified energy auditor with expertise in building energy efficiency who meets the following criteria:
i. a professional engineer ("P.Eng."), a certified engineering technologist ("CET"), a certified energy manager or a certified measurement and verification professional; with a minimum of three years of experience evaluating energy systems in buildings; or

ii. an engineer-in-training under the supervision of a P.Eng. or a CET, only if a qualified and experienced person as described in (i) above certifies and signs the energy assessment report; and

iii. the qualified professional that meets (i) or (ii) must be independent of and third party to the Program applicant.

Source: Excerpt from the requirements for the Toronto Hydro Audit Funding Incentive
https://www.saveonenergy.ca/Business/Program-Overviews/Audit-Funding/Eligibility.aspx

Property owners will be responsible for engaging a qualified professional to complete the building energy assessment and will assume any associated costs. Property owners may be able to offset these costs through incentives from Toronto Hydro or Enbridge as described in section 2.9. below. Property owners will also be responsible for any costs incurred by the City to verify the assessment report and these costs will be recovered as part of the Program administration costs.

The property owner will be required to provide the City with an energy assessment (energy audit) report that includes the identification of: recommended energy efficiency improvements (the measures), the anticipated energy and cost savings (expressed as dollars and percentage), the expected useful life of measures, the cost range for the recommended measures and eligibility for incentives.

The report provided by an eligible qualified professional will be reviewed by either a third party or City staff to determine the reasonableness of the associated costs of the proposed retrofit project. In the instance where property owners are applying to the Program for measures that have received prior approval from Enbridge Gas or Toronto Hydro, the Enbridge Gas and/or Toronto Hydro approval would suffice as third-party verification for those measures.

2.5. Qualifying Energy Efficiency, Renewable Energy Technologies and Water Conservation Measures

In the Multi-Residential Stream of the Program, property owners are able to propose a range of retrofit measures that would improve the quality of life for residents, improve building condition and help to reduce building operating costs. To qualify for funding, retrofit measures proposed by the property owner must be identified by the energy assessment (energy audit) report, provided by an eligible qualified energy auditor. The qualified energy auditor must meet the criteria set out in Section 2.4.

Eligible retrofit measures would be required to demonstrate the potential to achieve cost-effective savings or to demonstrate how the retrofit measure complements an overall state of good repair capital program for the building. For example, undertaking a window replacement and balcony door replacement may significantly improve resident comfort and address deferred maintenance issues as well as generating energy savings.
A non-exhaustive list of the categories of retrofit measures supported through the Program include:

i. **Mechanical Systems (including electricity and HVAC related measures):** boilers, bi-level lighting in parking garages, hot water circulation pump controls

ii. **Building Envelope improvements:** window and balcony door replacement, solar walls, insulated cladding for exterior walls

iii. **Water Efficiency improvements:** low-flow toilets and fixtures

iv. **Renewable Energy Technologies:** solar photovoltaics for thermal heating, solar photovoltaics for electricity generation, geothermal heating and cooling.

Retrofit measures that are not permanently affixed to the property or measures with an expected useful life of less than 5 years would not be eligible for the Program. The LIC term selected by the property owners shall not exceed the expected useful life of the retrofit. By defining categories of retrofit improvements and associated measures, the City makes no guarantees of the materials, performance, cost-effectiveness or any warranty of the measures supported by the Program.

### 2.6. Completing the Retrofit Project

The City will provide funding to property owners for approved retrofit projects consisting of eligible retrofit measures that meet the criteria outlined in section 2.5, and have been recommended as part of the energy assessment report prepared by an eligible qualified energy auditor and verified by the City or its third party agent. Contractors will be hired by the property owner. The City will not pre-qualify contractors or procure contractors to perform energy assessments or undertake retrofit projects on behalf of property owners in connection with this Program. The property owner will use the funds disbursed by the City to pay contractors directly. Note that none of the Program funding can be used to pay for the completion of the energy assessment and related report but utility company rebates may be available to offset this cost.

The City is not responsible for the work quality of any contractors hired in connection with this Program and assumes no liability for the works undertaken. All retrofit improvements must adhere to local codes and by-laws. The property owner is responsible for ensuring that hired contractors are licensed, bonded, and insured. Any issues that may arise relating to the quality of workmanship or post-installation performance of retrofit measures, for example, should be dealt with by the property owner and contractor.

### 2.7. Application Process

The steps below outline the process and requirements property owners need to follow as part of the Program. City staff will periodically review this process to ensure effective Program implementation and, where deemed appropriate, the City may make changes in its sole discretion.
Step 1: Prequalification

Property owners submit an application form that will include the following information:

- Property address to confirm property is an eligible building type and ownership type.
- Property assessment roll number to confirm no outstanding payments owed to the City in the last five years.
- Acknowledgement of the application to the Program and consent to Program participation from all registered property owners.

Once the property owner has been prequalified by City staff, based on the above criteria, the City will provide a Notice to Proceed to the property owner.

Step 2: Building Energy Assessment and Funding Request Form

1. Building Energy Assessment

The property owner completes and provides a building energy assessment in accordance with Section 2.4 above and submits to the City the resulting Energy Assessment Report that the eligible qualified energy auditor provides the property owner.

The report must include:

- recommended energy efficiency improvements (the measures);
- the anticipated energy and cost savings (expressed as dollars and percentage);
- expected useful life of measures;
- the cost range for the recommended measures; and
- potential eligibility for incentives.

2. Funding Request Form

Along with the Energy Assessment Report, the property owner also will need to submit a Funding Request Form that:

- identifies the improvements that the property owner intends to install based on the Energy Assessment Report;
- identifies the cost for each improvement (including equipment, materials and labour costs) inclusive of HST;
- acknowledges that the property owner will obtain independent legal and financial advice with respect to participation in the Program; and
- specifies the amount of a prepayment (up to a maximum of 10 percent of the estimated cost of the work) that is being requested from the City upon signing the POA, if any. The City will determine at its sole discretion whether a prepayment will be advanced.

Following receipt of the Funding Request Form, the City will:

- confirm the eligibility of the works (e.g. items affixed to property);
- verify the reasonableness of retrofit costs and labour costs by consulting precedents, current pricing, prevailing labour rates and other means; and
- calculate the administrative costs using a formula that apportions the cost to the City to operate this Program between participating properties as a percentage of the cost of the
work undertaken relative to the percentage of the cost of the work to the overall budget for each Program Stream
(N.B. The "cost to the City" includes recurring costs and any non-recurring costs not covered by any grant funding that the City has obtained for the Program).

**Step 3: Property Owner Agreement**

After the City has confirmed the acceptability of the Building Energy Assessment Report and the Funding Request Form, the City will prepare a property owner agreement ("POA") for the property owner(s) to review and sign.

**Step 4: Completing Improvements**

1. *Initial Funding Disbursement*

Following execution of the POA, the City will have the option at its sole discretion to provide the property owner with an initial disbursement to a maximum of ten percent of the estimated cost of the work that can be used to pay contractors (i.e. security deposit). If provided, such disbursement would be agreed upon in the POA. The property owner will be contractually obligated to repay this initial disbursement if the property owner does not complete the improvements.

The improvements must be completed within a reasonable timeframe, as stipulated in the POA, to be determined by the City in its sole discretion.

Where a property owner anticipates several disbursements over a longer period of time to complete the work, the City may require the property owner to enter into separate POAs and may impose a separate special charge on the property for each disbursement.

2. *Final Funding Disbursement*

As will be detailed in the POA, the City will provide the final disbursement only after the property owner provides:

(i) proof that the work to install the approved retrofit measures has been properly completed and the work has been approved and accepted by the property owner; and
(ii) a detailed invoice and specification of the actual costs and useful life for all the works.

The City will be responsible for verifying that the retrofit project specified in the POA has been completed, either through a City staff or a third party verifying agent contracted by the City. The City will also verify all eligible utility rebates to be paid to the property and ensure that the rebate amounts are not included in the final funding disbursement.

**Step 5: LIC Repayment**

Following the City Treasurer's periodic certification of the local improvement roll (which occurs after the improvements on a given set of properties are complete and the final amounts of funding are confirmed), the City Solicitor will submit a corresponding bill for Council to adopt a
by-law pursuant to Section 35.14 of O.Reg 596/06 to impose the special charges on the
participating properties. For each property included in the by-law, the Treasurer will then add to
the City's tax roll for that property each year the portion of the imposed special charge that is due
in that year. These collective steps will provide priority lien status for the annual amount that the
Treasurer adds to the tax roll and will ensure that any subsequent property owner who was not a
party to the POA is bound to pay that amount.

To facilitate repayment of the annual special charge, the POA will require property owners to
enrol in the pre-authorized payment plan option of 11 monthly instalments similar to the existing
Program for property tax payments. At any time, a property owner can make a one-time payment
of the total outstanding amount owing to clear the property of the LIC charge. Failure to make
payments is treated with the same remedy as uncollected property taxes which may include
penalties and interest charges.

2.8. LIC Disclosure

As indicated above, the subsequent owner of a property on which the City has imposed a special
charge is required to pay the City the annual LIC amount even though that subsequent owner was
not a party to the original POA. In addition to notice that the City will be giving in accordance
with the provisions of O.Reg 596/06, the City also will take the following steps to ensure even
greater transparency of the LIC to interested parties by:

i. posting on the City's website notice of the special charge by-law to impose the charge on
   the property in advance of its introduction and after its adoption; and

ii. updating the Tax Certificate to include the full LIC amount, amount payable in the
current year, outstanding amounts owing and a note to reference the by-law pursuant to
which the special charge was imposed.

2.9. Access to Utility Rebates and Incentives

The City plans to promote relevant offerings from Enbridge Gas and Toronto Hydro in the
delivery of the Program to facilitate property owners' access to incentives and promotions. Incentives are subject to change and availability.

i. Examples of incentives available from Enbridge Gas:
   a. Retrofit incentives for up to 50 percent of eligible project cost to a maximum of
   $100,000.

ii. Examples of incentives currently available from Toronto Hydro:
   a. Energy Audit incentives of up to 50 percent of the cost to a maximum of $35,000
   for eligible buildings.
   b. Retrofit incentives providing up to 50 percent of the project cost for approved
   measures.
The funding advanced by the City will be net of any rebates or other incentives received by the property owners, with the exception of rebates received to offset the costs of the energy assessment.

2.10. Quality Control

As a means of additional oversight to confirm that the funded improvements were completed, the City reserves the right to have a City official or third party contractor complete an inspection. The property owner(s) is also responsible for keeping original copies of contractor invoices and may be required disclose this information to the City upon request.

2.11. Measurement and Verification

The property owner(s) must consent to providing the City with access to the property's utility usage data in order to monitor results and evaluate the Program's effectiveness for a period of five (5) years after completion of the retrofit. Also, the property owner(s) agrees to participate in surveys and other follow-up activities to help the City evaluate the Program.
