Hello Dan

My husband and I are strongly opposing the removal of the old, healthy 90 cm walnut tree on our street.

We live in the house second to the applicant house and the tree is our joy and treasure, not only for its size and green leaves, abundance of birds and squirrels but for the obvious benefit to the environment.

The tree gives us fresh air, and keeps the soil together. For the owners of the property at 34 Aldgate Ave, this tree provides the cooling effect during summer and automatically saves energy.

As you know the tree is located on the backyard, so it should not affect the house pipes, but if it does we know very well that the old pipes can be replaced with PVC pipes which allow roots to go around them.

We would like to mention that the present owners of the property on 34 Aldgate Ave. moved in about two years ago, therefore it was not a SURPRISE to them that this tree was there already. If they possess a dislike to large trees they really should have considered a different neighbourhood.

We hope Toronto Urban Forestry will not allow this beautiful tree to be destroyed.

Thank you.

Sincerely,

Barbara & Swietoslaw Iwasiuk
