

EX 8.1.12

July 25, 2011

City of Toronto Executive Committee

At Bullfrog Power, we strongly support and respect the important work undertaken by the Toronto Atmospheric Fund (TAF). Over the past 20 years, TAF has been a catalyst for important action on climate change and air pollution in support of a cleaner, healthier environment for our communities.

We are also pleased to have had the opportunity to partner with TAF on several initiatives aimed at advancing renewable energy solutions including wind power, solar thermal water heating, and green powered electric vehicles including our participation in the current Fleetwise EV300 initiative.

We believe the services that TAF provides and the role the organization plays on behalf of the City of Toronto are essential to address the complex issues of climate change and assist local business, residents and government in preparing for a low carbon economy.

Sincerely,

Tom Heintzman
