Re: Item 2011.PW9.5 – Implementation of Findings from Comparative Analysis of Pipe Materials Study for Large Diameter Transmission Watermain

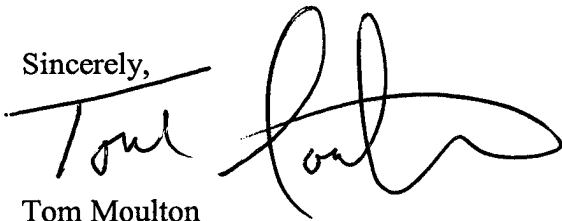

Dear City Council,

Emco Corporation is a distributor of products for the Sewer and Watermain Industry in Canada. We have several locations in the Greater Toronto area and are actively involved with Contractors and Municipalities in providing the most up-to-date material for these projects.

The opportunity for the City of Toronto to review and approve other piping materials for large diameter transmission mains will be very beneficial for the city and it's residents. There will be positive impacts, both on the economy and the environment, for all concerned, particularly with the inclusion of PVC pipe.

Emco Corporation supports the initiative the City of Toronto has taken in reviewing and hopefully adopting the recommendations of the above referenced report.

Sincerely,

Tom Moulton
Branch Manager
Emco Corporation
