## EXECUTIVE SUMMARY

---

---

The following summarizes the findings of the 2013 Development Charges (DC) Background Study.

### A. STUDY CONSISTENT WITH DC LEGISLATION

- This study calculates DCs for the City of Toronto in compliance with the provisions of the *Development Charges Act, 1997 (DCA)* and its associated regulation (*Ontario Regulation 82/98*).
- The City of Toronto's existing DC by-law, By-law 275-2009, expires on April 30, 2014, and Council must pass a new DC by-law before this expiry date in order to continue to levy DCs.
  - The City's DC by-law review is being advanced in order to update DC rates and policies and in light of progress on major development projects and associated infrastructure needs.
- The City needs to continue implementing DCs to fund capital projects related to growth throughout Toronto so that development pays for its capital requirements to the extent allowed by the *DCA* and so that new services required by growth are provided in a fiscally responsible manner.
- The *DCA* and *O. Reg. 82/98* require that a DCs background study be prepared in which DCs are determined with reference to:
  - a forecast of the amount, type and location of housing units, population and non-residential development anticipated in the City;
  - a review of future capital projects, including an analysis of gross expenditures, funding sources, and net expenditures incurred or to be incurred by the City to provide for the expected development, including the determination of the growth and non-development-related components of the capital projects; and
  - an examination of the long-term capital and operating costs for the capital infrastructure required for each service to which the DC by-law would relate.

- This report identifies the development-related net capital costs which are attributable to development that is forecast to occur in the City. These costs are apportioned to types of development (residential, non-residential) in a manner that reflects the increase in the need for each service attributable to each type of development.

**B. ALL SERVICES WITH DEVELOPMENT-RELATED COSTS ARE INCLUDED IN THE ANALYSIS**

- The following City services are included in the DC analysis:
  - Spadina Subway Extension
  - Transit
  - Roads and Related
  - Water
  - Sanitary Sewer
  - Storm Water Management
  - Parks and Recreation
  - Library
  - Subsidized Housing
  - Police
  - Fire
  - Emergency Medical Services
  - Development-Related Studies
  - Civic Improvements
  - Child Care
  - Health
  - Pedestrian Infrastructure

**C. DCS FOR ALL SERVICES ARE CALCULATED ON A CITY-WIDE BASIS**

- A City-wide average cost approach is used to calculate DCs for all services considered in this background study. This approach results in uniform charges throughout the City.
- The City is examining the potential use of area-specific DCs in some areas of the City, most notably the Port Lands, for services, or shares of services, not included as related to development in this background study. If the use of area-specific DCs is to be further explored in the City of Toronto, it will be dealt with in a separate DC background study, process, and by-law.

**D. THE CITY OF TORONTO IS ANTICIPATED TO GROW BY 240,000 PEOPLE AND 95,000 EMPLOYEES OVER THE NEXT 10 YEARS**

- A development forecast for the 10-year study period, 2013–2022, estimates that the City’s population will grow by approximately 240,000 people.
- The population growth will be accommodated in just over 114,000 new dwelling units to be added over the 10-year period.
- The City’s employment is forecast to grow by approximately 95,000 employees over the next 10 years.
- This employment growth is projected to generate about 5.2 million square metres of new non-residential building space between 2013 and 2022.
- The following is a summary of the projected growth for the City:

| <b>Growth in Planning Period</b>       | <b>2013-2022</b> | <b>Total at 2022</b> |
|--|------------------|----------------------|
| <b>Residential</b>                     |                  |                      |
| Total Occupied Dwellings               | 113,690          | 1,180,000            |
| <i>Singles and Semis</i>               | 8,130            |                      |
| <i>Rows and Multiples</i>              | 7,690            |                      |
| <i>Apartments</i>                      | 97,870           |                      |
| Total Population                       |                  |                      |
| Census                                 | 241,600          | 2,893,000            |
| <i>Population In New Dwellings</i>     | 241,762          |                      |
| <b>Non-Residential</b>                 |                  |                      |
| Employment                             | 94,685           | 1,622,000            |
| Non-Residential Building Space (sq.m.) | 5,200,000        |                      |

**E. INCREASE IN NEED FOR SERVICE IS BASED ON “NET” GROWTH**

- In accordance with the *DCA*, DCs are calculated at a level no higher than the average service level provided in the City over the 10-year period immediately preceding the preparation of the background study, on a service-by-service basis.

- The increase in need for service required to service the anticipated development is based on the “net” population and employment growth in the City.

**F. THE DC STUDY INCLUDES A \$5.27 BILLION DEVELOPMENT-RELATED CAPITAL PROGRAM FOR GENERAL SERVICES AND A \$6.48 BILLION PROGRAM FOR ENGINEERED SERVICES**

- The 2013–2022 development-related capital program for general services, including Spadina Subway extension, other transit, parks, indoor recreation, library, subsidized housing, police, fire, EMS, studies, civic improvements, child care, health and pedestrian infrastructure totals \$5.27 billion.
- The development-related capital program for engineered services, including roads, water, sewer and storm water management services, totals an additional \$6.48 billion in expenditures over the period 2013–2022.
- The *DCA* requires that when calculating DCs the gross capital costs be reduced by: grants, subsidies, and recoveries from other governments; capital replacements or other benefits provided to the existing community; existing reserve fund balances; amounts that exceed historic service levels; and a statutory 10% reduction for eligible soft services.
- After these deductions, the net development-related general services capital program is reduced to \$2.13 billion and the city-wide engineering development-related capital program decreases to \$1.26 billion. These amounts are eligible for recovery through DCs against development over the period 2013–2022.
- The following is a summary of the development-related capital program.

### Development-Related Capital Program Summary

| Service                                | Gross Cost<br>(\$000) | DC Eligible Cost<br>For Recovery<br>(\$000) |
|--|-----------------------|---|
| Spadina Subway Extension               | \$1,123,975.8         | \$332,188.8                                 |
| Transit (other)                        | \$2,064,252.3         | \$896,359.3                                 |
| Parks and Recreation                   | \$934,342.7           | \$470,603.4                                 |
| Library                                | \$398,219.5           | \$108,567.3                                 |
| Subsidized Housing                     | \$266,784.0           | \$84,037.0                                  |
| Police                                 | \$167,805.0           | \$72,855.6                                  |
| Fire                                   | \$33,484.9            | \$33,034.9                                  |
| EMS                                    | \$42,710.0            | \$18,153.3                                  |
| Development Related Studies            | \$49,242.0            | \$24,757.6                                  |
| Civic Improvements                     | \$27,826.0            | \$21,286.9                                  |
| Child Care                             | \$43,400.0            | \$39,060.0                                  |
| Health                                 | \$11,793.0            | \$5,519.0                                   |
| Pedestrian Infrastructure              | \$105,000.0           | \$20,630.9                                  |
| <b>Sub-Total – General Services</b>    | <b>\$5,268,835.2</b>  | <b>\$2,127,053.9</b>                        |
| Roads and Related                      | \$1,215,009.7         | \$466,927.9                                 |
| Water                                  | \$1,620,020.9         | \$397,319.0                                 |
| Sanitary Sewer                         | \$2,483,844.0         | \$286,308.9                                 |
| Storm Water Management                 | \$1,162,257.3         | \$108,746.0                                 |
| <b>Sub-Total – Engineered Services</b> | <b>\$6,481,131.9</b>  | <b>\$1,259,301.8</b>                        |
| <b>Total All Services</b>              | <b>\$11,749,967.0</b> | <b>\$3,386,355.7</b>                        |

#### G. PROPOSED CITY-WIDE CHARGES INCREASE OVER PRESENT CHARGES

- The following tables summarize the proposed residential and non-residential City-wide DCs.

### Calculated Residential Charges for City-Wide Services

| Service                             | Residential Charge By Unit Type (1) |                 |                        |                            |                 |
|-------------------------------------|-------------------------------------|-----------------|------------------------|----------------------------|-----------------|
|                                     | Singles & Semis                     | Multiples       | Apartments 2+ Bedrooms | Apartments 1 Bed and Bach. | Dwelling Room   |
| Spadina Subway Extension            | \$3,399                             | \$2,781         | \$2,090                | \$1,454                    | \$909           |
| Transit (balance)                   | \$9,138                             | \$7,477         | \$5,620                | \$3,910                    | \$2,443         |
| Parks and Recreation                | \$6,989                             | \$5,718         | \$4,298                | \$2,990                    | \$1,869         |
| Library                             | \$1,600                             | \$1,309         | \$984                  | \$685                      | \$428           |
| Subsidized Housing                  | \$1,290                             | \$1,055         | \$793                  | \$552                      | \$345           |
| Police                              | \$743                               | \$608           | \$457                  | \$318                      | \$199           |
| Fire                                | \$347                               | \$284           | \$213                  | \$148                      | \$93            |
| Emergency Medical Services          | \$195                               | \$160           | \$120                  | \$84                       | \$52            |
| Development-related Studies         | \$266                               | \$218           | \$164                  | \$114                      | \$71            |
| Civic Improvements                  | \$216                               | \$176           | \$133                  | \$92                       | \$58            |
| Child Care                          | \$380                               | \$311           | \$234                  | \$163                      | \$102           |
| Health                              | \$60                                | \$49            | \$37                   | \$26                       | \$16            |
| Pedestrian Infrastructure           | \$70                                | \$58            | \$43                   | \$30                       | \$19            |
| <b>Subtotal General Services</b>    | <b>\$24,693</b>                     | <b>\$20,204</b> | <b>\$15,186</b>        | <b>\$10,566</b>            | <b>\$6,604</b>  |
| Roads and Related                   | \$4,742                             | \$3,880         | \$2,916                | \$2,029                    | \$1,268         |
| Water                               | \$4,030                             | \$3,298         | \$2,479                | \$1,724                    | \$1,078         |
| Sanitary Sewer                      | \$2,901                             | \$2,374         | \$1,784                | \$1,241                    | \$776           |
| Storm Water Management              | \$1,091                             | \$892           | \$671                  | \$467                      | \$292           |
| <b>Subtotal Engineered Services</b> | <b>\$12,764</b>                     | <b>\$10,444</b> | <b>\$7,850</b>         | <b>\$5,461</b>             | <b>\$3,414</b>  |
| <b>TOTAL CHARGE PER UNIT</b>        | <b>\$37,457</b>                     | <b>\$30,648</b> | <b>\$23,036</b>        | <b>\$16,027</b>            | <b>\$10,018</b> |
| (1) Based on Persons Per Unit Of:   | 3.74                                | 3.06            | 2.30                   | 1.60                       | 1.00            |

### Calculated Non-Residential Charges for City-Wide Services

| <b>Service</b>                      | <b>Calculated<br/>Non-Residential<br/>Charge (\$/ sq. m)</b> |
|-------------------------------------|--|
| Spadina Subway Extension            | \$21.63  |
| Transit (balance)                   | \$59.04  |
| Parks and Recreation                | \$4.67   |
| Library                             | \$1.07   |
| Subsidized Housing                  | \$0.00   |
| Police                              | \$4.80   |
| Fire                                | \$2.26   |
| Emergency Medical Services          | \$1.28   |
| Development-related Studies         | \$1.74   |
| Civic Improvements                  | \$1.39   |
| Child Care                          | \$2.44   |
| Health                              | \$0.39   |
| Pedestrian Infrastructure           | \$3.58   |
| <b>Subtotal General Services</b>    | <b>\$104.29</b>  |
| Roads and Related                   | \$30.48  |
| Water                               | \$25.87  |
| Sanitary Sewer                      | \$18.63  |
| Storm Water Management              | \$7.00   |
| <b>Subtotal Engineered Services</b> | <b>\$81.98</b>   |
| <b>TOTAL CHARGE PER SQ.M.</b>       | <b>\$186.27</b>  |

- As illustrated in the next table, the proposed residential charge is 86% higher than the present charge for large apartment units.

### Comparison of City-Wide Residential Charges

| Service                             | Current Charge per Large Apt | Calculated Charge per Large Apt | Difference in Charge |            |
|-------------------------------------|------------------------------|---------------------------------|----------------------|------------|
|                                     |                              |                                 |                      |            |
| Spadina Subway Extension            | \$1,539                      | \$2,090                         | \$551                | 36%        |
| Transit (balance)                   | \$2,252                      | \$5,620                         | \$3,368              | 150%       |
| Parks and Recreation                | \$1,967                      | \$4,298                         | \$2,331              | 119%       |
| Library                             | \$707                        | \$984                           | \$277                | 39%        |
| Subsidized Housing                  | \$859                        | \$793                           | (\$66)               | -8%        |
| Police                              | \$245                        | \$457                           | \$212                | 87%        |
| Fire                                | \$106                        | \$213                           | \$107                | 101%       |
| Emergency Medical Services          | \$19                         | \$120                           | \$101                | 532%       |
| Development-related Studies         | \$189                        | \$164                           | (\$25)               | -13%       |
| Civic Improvements                  | \$148                        | \$133                           | (\$15)               | -10%       |
| Child Care                          | \$148                        | \$234                           | \$86                 | 58%        |
| Health                              | \$36                         | \$37                            | \$1                  | 3%         |
| Pedestrian Infrastructure           | \$5                          | \$43                            | \$38                 | 760%       |
| <b>Subtotal General Services</b>    | <b>\$8,220</b>               | <b>\$15,186</b>                 | <b>\$6,966</b>       | <b>85%</b> |
| Roads and Related                   | \$2,079                      | \$2,916                         | \$837                | 40%        |
| Water                               | \$1,638                      | \$2,479                         | \$841                | 51%        |
| Sanitary Sewer                      | \$191                        | \$1,784                         | \$1,593              | 834%       |
| Storm Water Management              | \$284                        | \$671                           | \$387                | 136%       |
| <b>Subtotal Engineered Services</b> | <b>\$4,192</b>               | <b>\$7,850</b>                  | <b>\$3,658</b>       | <b>87%</b> |
| <b>TOTAL CHARGE PER UNIT</b>        | <b>\$12,412</b>              | <b>\$23,036</b>                 | <b>\$10,624</b>      | <b>86%</b> |

- The current City DC by-law provides for a phase-in of the DC rates and provides a discount from the fully calculated rate in the previous DC background study. The newly calculated charge is approximately 52% higher than the maximum residential calculated charge in the previous study.
- As illustrated in the next table, the proposed non-residential charge is 32% higher than the present non-residential charge.

### Comparison of City-Wide Non-Residential Charges

| Service                             | Non-Residential (\$/Square Metre) |                                   |                      |            |
|-------------------------------------|-----------------------------------|-----------------------------------|----------------------|------------|
|                                     | Current Non-Residential Charge    | Calculated Non-Residential Charge | Difference in Charge |            |
| Spadina Subway Extension            | \$17.18                           | \$21.63                           | \$4.45               | 26%        |
| Transit (balance)                   | \$34.81                           | \$59.04                           | \$24.23              | 70%        |
| Parks and Recreation                | \$1.73                            | \$4.67                            | \$2.94               | 170%       |
| Library                             | \$0.62                            | \$1.07                            | \$0.45               | 73%        |
| Subsidized Housing                  | \$0.00                            | \$0.00                            | \$0.00               | 0%         |
| Police                              | \$3.78                            | \$4.80                            | \$1.02               | 27%        |
| Fire                                | \$1.64                            | \$2.26                            | \$0.62               | 38%        |
| Emergency Medical Services          | \$0.10                            | \$1.28                            | \$1.18               | 1180%      |
| Development-related Studies         | \$2.93                            | \$1.74                            | (\$1.19)             | -41%       |
| Civic Improvements                  | \$2.30                            | \$1.39                            | (\$0.91)             | -40%       |
| Child Care                          | \$2.29                            | \$2.44                            | \$0.15               | 7%         |
| Health                              | \$0.07                            | \$0.39                            | \$0.32               | 457%       |
| Pedestrian Infrastructure           | \$0.35                            | \$3.58                            | \$3.23               | 923%       |
| <b>Subtotal General Services</b>    | <b>\$67.80</b>                    | <b>\$104.29</b>                   | <b>\$36.49</b>       | <b>54%</b> |
| Roads and Related                   | \$32.47                           | \$30.48                           | (\$1.99)             | -6%        |
| Water                               | \$29.25                           | \$25.87                           | (\$3.38)             | -12%       |
| Sanitary Sewer                      | \$6.54                            | \$18.63                           | \$12.09              | 185%       |
| Storm Water Management              | \$5.10                            | \$7.00                            | \$1.90               | 37%        |
| <b>Subtotal Engineered Services</b> | <b>\$73.36</b>                    | <b>\$81.98</b>                    | <b>\$8.62</b>        | <b>12%</b> |
| <b>TOTAL CHARGE PER SQ.M.</b>       | <b>\$141.16</b>                   | <b>\$186.27</b>                   | <b>\$45.11</b>       | <b>32%</b> |

- The current City DC by-law provides for a phase-in of the DC rates and provides a discount from the fully calculated rate in the previous DC background study. The newly calculated charge is 10% higher than the maximum calculated non-residential charge in the previous study.

#### H. A PORTION OF DEVELOPMENT-RELATED COSTS REQUIRES FUNDING FROM NON-DC SOURCES

- The DCA requires that the development-related net capital costs for “soft” services be reduced by 10% in calculating the applicable DCs for these

services. The 10% share of development-related net capital costs not included in the DC calculation must be funded from non-DC sources.

- In total, nearly \$229.67 million is required to provide the required 10% reduction.
- Non-DC funding for replacement portions of the capital forecast (e.g. reconstruction and enlargement of EMS Stations 39 and 43) and other benefits to the existing community (e.g. for Union Station revitalization) will total an additional \$4.88 billion.
- In sum, tax-supported and utility rate funding of \$5.11 billion will be required over the 2013–2022 period to support the development-related capital program.
- It is estimated also that net operating costs will increase by about \$541.24 million by year 2022 as the facilities and infrastructure embodied in the capital forecast are operated and maintained.

## I INTRODUCTION

---

---

This City of Toronto Development Charges (DC) Background Study is presented as part of the process to lead to the approval of a new DC by-laws in compliance with the *Development Charges Act, 1997 (DCA)*.

The *DCA* and *Ontario Regulation 82/98 (O. Reg. 82/98)* require that a DC background study be prepared in which DCs are determined with reference to:

- A forecast of the amount, type and location of housing units, population and non-residential development anticipated in the City;
- The average capital service levels provided in the City over the 10-year period immediately preceding the preparation of the background study;
- A review of capital works in progress and anticipated future capital projects, including an analysis of gross expenditures, funding sources, and net expenditures incurred or to be incurred by the City or its local boards to provide for the expected development, including the determination of the growth and non-development-related components of the capital projects; and
- An examination of the long-term capital and operating costs for the capital infrastructure required for each service to which the DC by-law would relate.

This study presents the results of the review which determines the development-related net capital costs which are attributable to development that is forecast to occur in the community. These development-related net capital costs are then apportioned among various types of development (residential; non-residential) in a manner that reflects the increase in the need for each service attributable to each type of development. The study arrives, therefore, at proposed DCs for various types of development.

The *DCA* provides for a period of public review and comment regarding the proposed DCs. Following completion of this process in accordance with the *DCA* and Council's review of this study and the comments it receives regarding this study or other information brought to its attention about the proposed charges, it is intended that Council will pass new DCs for the City.

The remainder of this study sets out the information and analysis upon which the proposed DCs are based.

Section II designates the services for which the DCs are proposed and the areas within the City to which the DCs will apply. It also briefly reviews the methodology that has been used in this background study.

Section III presents a summary of the forecast residential and non-residential development which is expected to occur within the City over the 2013–2022 period.

Section IV summarizes the historic 10-year average capital service levels that have been attained in the City which form the basis for DC calculations.

In Section V, the development-related capital forecast that has been developed by various City departments and boards is reviewed.

Section VI summarizes the calculation of applicable DCs and the resulting proposed DCs by class and type of development as well as by geographic area in the City.

Section VII provides a comparison of existing DC rates in the City with the rates proposed in this study.

Section VIII provides an examination of the long-term capital and operating costs for each service included in the DC calculation.

Section IX provides a review of DC administrative matters such as DC policies and practices, city-wide versus area-specific charges, DC by-law provisions, potential economic impact of DCs and local service definitions.

## **II A CITY-WIDE METHODOLOGY ALIGNS DEVELOPMENT-RELATED COSTS AND BENEFITS**

---

---

Several key steps are required in calculating a DC. However, specific circumstances arise in each City which must be reflected in the calculation. In this study, therefore, we have tailored our approach to the City of Toronto's unique circumstances. The approach to the calculated DCs is focused on providing a reasonable alignment of development-related costs with the development that necessitates them. This study calculates charges on a City-wide basis which is consistent with the City's current by-law. Despite the fact that DCs are calculated on a City-wide basis, legislation allows a municipality to exempt or reduce rates for specific geographic areas. However, legislation prevents the recovery of revenue lost due to exemptions or reductions from being recovered through increased charges on other areas.

### **A. CITY-WIDE DCS ARE CALCULATED**

The City provides a wide range of services to the community it serves and has an extensive inventory of facilities, land, infrastructure, vehicles and equipment. The *DCA* provides municipalities with flexibility to define services that will be included in the DC by-laws, provided that the other provisions of the *DCA* and its associated regulations are met. The *DCA* also requires that the by-laws designate the areas within which the by-laws shall be imposed. The DCs may apply to all lands in the municipality or to other designated development areas as specified in the by-laws.

The following services are included in the City-wide DC calculation:

- Spadina Subway Extension
- Transit
- Roads and Related
- Water
- Sanitary Sewer
- Storm Water Management
- Parks and Recreation
- Library
- Subsidized Housing
- Police
- Fire
- Emergency Medical Services
- Development-Related Studies
- Civic Improvements
- Child Care
- Health
- Pedestrian Infrastructure

These services form a reasonable basis on which to plan and administer DCs. It is noted that the analysis of each of these services examines the individual capital facilities and equipment that make them up. For example, indoor recreation includes various indoor facilities such as community centres, pools, arenas; associated land requirements as allowed under the *DCA*; and equipment.

The resulting DC for these services would be imposed against all development anywhere in the City.

#### **B. KEY STEPS IN DETERMINING DCS FOR FUTURE DEVELOPMENT-RELATED PROJECTS**

Several key steps are required in calculating DCs for future development-related projects. These are summarized below.

## 1. Growth Forecast

The first step in the methodology requires a development forecast to be prepared for the 10-year study period, 2013–2022, for all services considered in the study. The forecast of the future residential and non-residential development by location used in this study is based on growth anticipated to occur within approved Official Plan-designated urban areas. The forecast reflects Official Plan targets, 2011 Census data and recent development activity.

For the residential portion of the forecast, the net population growth and population growth in new units are estimated. Net population growth equals the population in new housing units reduced by the decline in the population in the existing base anticipated over the 10-year period and to build-out (due to reducing household sizes as the community ages). Net population is used in the calculation of the DC funding envelopes. In calculating the per capita DC, however, the population growth in new housing units is used.

The non-residential portion of the forecast estimates the gross floor area (gfa) of building space to be developed over the 10-year period, 2013–2022. The forecast provides estimates for three categories: population-related development, major office development, and employment land development. The forecast of gfa is based on the employment forecast for the City. Factors for floor space per worker by category are used to convert the employment forecast into gfa's for the purposes of the DC study.

## 2. Service Categories and Historic Service Levels

The *DCA* provides that the increase in the need for service attributable to anticipated development:

... must not include an increase that would result in the level of service exceeding the average level of that service provided in the municipality over the 10-year period immediately preceding the preparation of the background study...(s. 5. (1) 4.)

Historic 10-year average service levels thus form the basis for DCs. A review of the City's capital service levels for buildings, land, vehicles, and so on has therefore been prepared as a reference for the calculation so that the portion of future capital projects that may be included in the DC can be determined. The historic service levels used in this study have been calculated based on the period 2003–2012.

For certain engineered services, namely water, sanitary sewer and storm water management, historic service levels are less applicable and reference is made to the

City's engineering standards as well as Provincial health and environmental requirements.

### **3. Development-related Capital Forecast and Analysis of Net Capital Costs to be Included in the DCs**

A development-related capital forecast has been prepared by the City's departments and boards as part of the present study. The forecast identifies development-related projects and their gross and net costs, after allowing for capital grants, subsidies or other contributions as required by the *DCA* (s. 5. (2)). The City has received, or is anticipated to receive, upper-level government funding for some projects and furthermore some projects including cost-sharing with the Region of York. For these projects, grants and contributions from other agencies have been netted off the gross project costs thus reducing the City's net capital costs. The capital forecast provides another cornerstone upon which DCs are based. The *DCA* requires that the increase in the need for service attributable to the anticipated development may include an increase:

... only if the council of the municipality has indicated that it intends to ensure that such an increase in need will be met. (s. 5. (1) 3.)

In conjunction with the *DCA*, s. 5. (1) 4. referenced above, these sections require that the DC be calculated on the lesser of the historic 10-year average service levels or the service levels embodied in future plans of the City. The development-related capital forecast prepared for this study ensures that DCs are only imposed to help pay for projects that have been or are intended to be purchased or built in order to accommodate future anticipated development. It is not sufficient in the calculation of DCs merely to have had the service in the past. There must also be a demonstrated commitment to continue to emplace facilities or infrastructure in the future. In this regard, *Ontario Regulation 82/98*, s. 3 states that:

For the purposes of paragraph 3 of subsection 5 (1) of the Act, the council of a municipality has indicated that it intends to ensure that an increase in the need for service will be met if the increase in service forms part of an official plan, capital forecast or similar expression of the intention of the council and the plan, forecast or similar expression of the intention of the council has been approved by the council.

For some projects in the development-related capital forecast, a portion of the project may confer benefits to existing residents. As required by the *DCA*, s. 5. (1) 6., these portions of projects and their associated net costs are the funding responsibility of the City from non-DC sources. The amount of City funding for such non-growth shares of projects is also identified as part of the preparation of the development-related capital forecast.

There is also a requirement in the *DCA* to reduce the applicable DC by the amount of any “uncommitted excess capacity” that is available for a service. Such capacity is available to partially meet the future servicing requirements. Adjustments are made in the analysis to meet this requirement of the *DCA*.

Finally, in calculating DCs, the development-related net capital costs must be reduced by 10% for all services except water, wastewater, storm drainage, services related to highways and fire (the *DCA*, s. 5. (1) 8.). The 10% discount is applied to the other services, e.g. indoor recreation, libraries, public works, and the resulting City funding responsibility from non-DC sources is identified.

#### **4. Attribution to Types of Development**

The next step in the determination of DCs is the allocation of the development-related net capital costs between the residential and the non-residential sectors. This is done by using different apportionments for different services in accordance with the demands which the two sectors would be expected to place on the various services and the different benefits derived from those services.

Where reasonable data exist, the apportionment is based on the expected demand for, and use of, the service by each sector (e.g. shares of population and employment).

Finally, the residential component of the City-wide DC is applied to different housing types on the basis of average occupancy factors. The non-residential component is applied on the basis of gross building space in square metres.

#### **5. Final Adjustment**

The final determination of the DC results from adjustments made to development-related net capital costs for each service and sector resulting from the application of any unallocated development-related reserve fund balances that are available to finance the development-related capital costs in the capital forecast. A cash flow analysis is also undertaken to account for the timing of projects and receipt of DCs. Interest earnings or borrowing costs are therefore accounted for in the calculation as allowed under the *DCA*.

### **III POPULATION IS FORECAST TO INCREASE BY 241,600 AND NON-RESIDENTIAL BUILDING SPACE BY 5.2 MILLION SQUARE METRES BY 2022**

---

---

The City of Toronto is the central city and the major economic and employment concentration of the metropolitan Greater Toronto and Hamilton Area (GTHA), accounting for 45% of the employment in the area and about 40% of its nearly 7 million population. The GTHA itself is the centre of the larger urban region of the GGH housing over 9 million people.

After several decades of metropolitan growth concentrating in the suburbs surrounding Toronto, the City has returned to much larger share of new development. In recent years, Toronto has emerged as North America's largest market for high-rise apartment development, with nearly 200 projects totalling over 43,000 units under construction at the end of 2012. The resurgence of the downtown office market, after 20 years of relatively slow growth, is further evidence of the renewed attraction of the City for both business investment and high-density living.

As a result of past development, and unlike most of the 905 area, Toronto's land supply is nearly fully developed. Aside from a small amount of greenfield land in north-east Scarborough, there are few opportunities to provide a large supply of new development sites. From a development perspective, this means that most of the City's future growth in population and employment will be accommodated through a more intensive use of the existing land and building supply, including higher-density residential development, office development and commercial redevelopment.

This pattern of growth, in particular the reliance on more intensive forms of development, will have many effects on land use and infrastructure planning, and therefore, the municipal corporation as whole. New projects will become ever more complex and contentious. The City's infrastructure will also need to be maintained, replaced and expanded to accommodate growth, which in some cases will have major municipal finance implications. The following forecasts have been prepared to provide the City of Toronto staff and Council with the information base that is

required to effectively plan ahead for these challenges and fund necessary new infrastructure.

This section begins with a brief discussion of recent growth trends in the GTHA and in Toronto. This is followed by a summary of the results of the housing unit and population forecast and of the non-residential employment and space forecast. Details of the forecasts are provided in Appendix A.

## **A. POPULATION AND HOUSING FORECAST**

The forecast approach is structured, in part, as a “top-down” model so that the Toronto forecasts will reflect trends occurring across the economic region, such as recent rises in fertility rates, the continued decline in mortality rates and the current levels of immigration to the region. A number of “bottom-up” factors, however, are also incorporated in the forecasts, the most important of which for the City of Toronto is the nature of the land supply and anticipated future pattern of growth; i.e. most of the City’s growth will occur in medium- and high-density development forms. A range of data sources have been used in the forecast, including:

- *Greater Golden Horseshoe Growth Forecasts to 2041*, Technical Report, November 2012, prepared by Hemson Consulting Ltd. for the Ontario Ministry of Infrastructure. This report in turn relies on a wide range of Census data, other Statistics Canada data and a range of local inputs.
- All 2006 Census data for the GTHA and Toronto as well as the available information from the 2011 Census.
- Statistics Canada building permit data on the value of non-residential permits as a basis for the forecast of non-residential space growth.
- The City’s most recent housing and employment data.
- Current CMHC housing data to best estimates of housing unit growth and housing market shares in terms of housing completions, housing starts and units currently under construction.
- Updated information for office space construction and employment land development as input to employment and non-residential space forecasts.

Table 1 provides a summary of the residential forecast for the 10-year planning period of 2013–2022.

**Table 1**  
**Summary of Residential Forecast**

| <b>Growth in Planning Period</b>   | <b>2013-2022</b> | <b>Total at 2022</b> |
|------------------------------------|------------------|----------------------|
| <b>Residential</b>                 |                  |                      |
| Total Occupied Dwellings           | 113,690          | 1,180,000            |
| <i>Singles and Semis</i>           | 8,130            |                      |
| <i>Rows and Multiples</i>          | 7,690            |                      |
| <i>Apartments</i>                  | 97,870           |                      |
| Total Population                   |                  |                      |
| Census                             | 241,600          | 2,893,000            |
| <i>Population In New Dwellings</i> | 241,762          |                      |

The City’s population is expected to increase by about 9% over the next 10 years reaching about 2.89 million by 2022.

The population figures referred to above reflect the “net” increase in population. This is the increase after taking into account the expected continuation of the decline in occupancy factors in existing housing units. The population residing in new housing units is expected to increase by 241,762 people over the 10-year planning period.

It is forecast that 114,000 housing units will be developed between 2013 and 2022.

#### **B. NON-RESIDENTIAL SPACE FORECAST IS BASED ON FORECAST EMPLOYMENT GROWTH**

Even more so than population, the nature of employment growth in Toronto is also affected by the land supply. The City of Toronto is unique within the GTHA because its employment land supply is almost fully developed. Unlike 905 communities, the City of Toronto’s ability to accommodate new employment growth depends heavily on the ability of existing developed areas to accommodate

employment growth through more intensive use, reuse and redevelopment of the developed land and building supply.

This condition results in a complex relationship between investment, job growth and use of existing buildings in the City. Because the employment base in Toronto is so large, even small shifts in factors such as floor space per worker can have a large effect on total employment. Because of this relationship, the market for new investment is driven more by the dynamics of the land and building supply rather than overall metropolitan demand for space. Major offices will play an increasingly important role in accommodating growth and the City will continue to accommodate employment growth in the form of retail and institutional services to the resident population.

Non-residential space is forecast according to three categories: population-related employment, major office employment, and employment land employment. Population-related employment includes traditional retail forms, such as regional centres, district centres, neighbourhood convenience, highway commercial, big box and power centres occupied by retail and local service uses. Population-related employment also includes institutional space consisting of all community institutional uses such as schools, places of worship and hospitals. Major office employment is defined as that contained in free-standing office buildings of 20,000 square feet or greater. Employment land employment consists of buildings in Toronto's "industrial" areas and may include some non-traditional retail space and office space associated with industrial or storage uses.

Because new non-residential space is required primarily to accommodate new employment growth, employment and space are expected to grow at similar rates over the forecast period.

The non-residential space forecast prepared for DC purposes is summarized in Table 2.

**Table 2**  
**Summary of Non-Residential Development Forecast**

| <b>Growth in Planning Period</b>       | <b>2013-2022</b> | <b>Total at 2022</b> |
|--|------------------|----------------------|
| <b>Non-Residential</b>                 |                  |                      |
| Employment                             | 94,685           | 1,622,000            |
| Non-Residential Building Space (sq.m.) | 5,200,000        |                      |

Table 2 provides a summary of the employment forecast for the 2013–2022 period. Over the next 10 years, employment is projected to grow by 94,685 employees, an increase of 6%. These are employees that will be accommodated in newly built non-residential building space. Given the dynamic of the City of Toronto non-residential land uses, it is recognized that some existing non-residential building will be demolished and/or redeveloped for other purpose, the employment associated with this building space is estimated at 29,000.

The table also shows that about 5.2 million square metres of GFA is forecast to become available over the next decade. The largest share of space (1.9 million square metres or about 36.5%) that is forecast to be added over the next 10 years is anticipated to be in the retail category. The next largest categories are forecast to be intuitional and “other commercial” related employment space each at about 1 million square metres (approximately 19% of the total). Major office space represents the remaining 750,000 square metres (14%) and industrial space accounts for the remaining 600,000 square metres (11.5%).

## **IV SUMMARY OF HISTORIC CAPITAL SERVICE LEVELS**

The *DCA* and *Ontario Regulation 82/98* require that the DCs be set at a level no higher than the average service level provided in the municipality over the 10-year period immediately preceding the preparation of the background study, on a service-by-service basis.

For general services (fire and rescue, library, indoor recreation etc.), the legislative requirement is met by documenting historic service levels for the preceding 10 years, in this case, for the period from 2003 to 2012. Typically, service levels for general services are measured as a ratio of inputs per capita (or per population plus employment). With engineered services such as water and sanitary sewer, engineering and legislated environmental and health standards are used in lieu of inputs per capita.

*O. Reg. 82/98* requires that when determining historical service levels both quantity and quality of service be taken into consideration. In most cases, the service levels are initially established in quantitative terms. For example, service levels for buildings are presented in terms of square feet per capita. The qualitative aspect is introduced by the consideration of the monetary value of the facility or service. In the case of buildings, for example, the cost would be shown in terms of \$/square foot to replace or construct a facility of the same quality. This approach helps to ensure that the development-related capital facilities that are to be charged to new growth reflect not only the quantity (number and size) but also the quality (value or replacement cost) of service provided historically by the City. Both the quantitative and qualitative aspects of service levels used in the present analysis are based on information provided by staff of the City and boards based on historical records and their experience with costs to acquire or construct similar facilities, equipment and infrastructure as of 2012.

Table 3 summarizes service levels for all general City-wide services included in the DC calculation (excluding Spadina Subway extension, water, sanitary sewer, and storm water management engineering services). Appendix B provides detailed historical inventory data upon which the calculation of service levels is based.

**Table 3**  
**Summary of Historic Service Levels 2003–2012**

| <b>Service</b>               | <b>Average Service Level</b> |
|------------------------------|------------------------------|
| 1 Transit (balance)          | \$7,901.67 / pop. & emp.     |
| 2 Roads and related          | \$2,177.87 / pop. & emp.     |
| 3 Parks and recreation       | \$2,164.30 / capita          |
| 4 Library                    | \$556.14 / capita            |
| 5 Subsidized housing         | \$909.03 / capita            |
| 6 Police                     | \$369.20 / pop. & emp.       |
| 7 Fire                       | \$179.90 / pop. & emp.       |
| 8 Emergency Medical Services | \$59.98 / pop. & emp.        |
| 9 Child care                 | \$379.71 / pop. & emp.       |
| 10 Health                    | \$26.37 / pop. & emp.        |

## **V THE DEVELOPMENT-RELATED CAPITAL FORECAST**

### **A. A DEVELOPMENT-RELATED CAPITAL FORECAST IS PROVIDED FOR COUNCIL'S APPROVAL**

The *DCA* requires the Council of a municipality to express its intent to provide future capital facilities at the level incorporated in the DC calculation. As noted above in Section II, *Ontario Regulation 82/98*, s. 3 states that:

For the purposes of paragraph 3 of subsection 5 (1) of the Act, the council of a municipality has indicated that it intends to ensure that an increase in the need for service will be met if the increase in service forms part of an official plan, capital forecast or similar expression of the intention of the council and the plan, forecast or similar expression of the intention of the council has been approved by the council.

Based on the growth forecasts summarized in Section III and detailed in Appendix A, staff of the City departments and agencies, in collaboration with the consultants, developed a development-related capital forecast as of December 31, 2012 setting out those projects that are required to service anticipated growth. For all services the capital plan covers the 10-year period from 2013 to 2022. In addition, the capital program identifies capital costs expended prior to 2013 that provide capacity to meet the servicing needs of development over the 2013 to 2022 planning period.

One of the recommendations contained in this background study is for Council to adopt the development-related capital forecast developed for the purposes of the DC calculation. It is assumed that future capital budgets and forecasts will continue to bring forward the development-related projects contained herein that are consistent with the growth occurring in the City. It is acknowledged that changes to the forecast presented here may occur through the City's normal capital budget process.

### **B. THE DEVELOPMENT-RELATED CAPITAL FORECAST FOR CITY-WIDE SERVICES**

A summary of the development-related capital forecast for all services is presented in Table 4.

**TABLE 4**  
**CITY OF TORONTO**  
**SUMMARY OF DEVELOPMENT-RELATED CAPITAL PROGRAM**  
**10-YEAR CAPITAL PROGRAM**  
**(in \$000s)**

| Service                        | Development-Related Capital Program 2013 -2022 |                                    |                       |                    |
|--------------------------------|--|------------------------------------|-----------------------|--------------------|
|                                | Gross Project Cost                             | Grants/ Subsidies/Other Recoveries | Net Costs             | Share of Net Costs |
| 1 Spadina Subway extension     | \$1,123,975.8                                  | \$0.0                              | \$1,123,975.8         | 10.7%              |
| 2 Transit (balance)            | \$2,064,252.3                                  | \$592,966.1                        | \$1,471,286.1         | 14.1%              |
| 3 Roads and related            | \$1,215,009.7                                  | \$52,433.8                         | \$1,162,575.9         | 11.1%              |
| 4 Water                        | \$1,620,020.9                                  | \$207,343.5                        | \$1,412,677.4         | 13.5%              |
| 5 Sanitary sewer               | \$2,483,844.0                                  | \$20,676.2                         | \$2,463,167.8         | 23.5%              |
| 6 Storm water management       | \$1,162,257.3                                  | \$162,800.3                        | \$999,457.1           | 9.6%               |
| 7 Parks and recreation         | \$934,342.7                                    | \$198,633.9                        | \$735,708.9           | 7.0%               |
| 8 Library                      | \$398,219.5                                    | \$320.0                            | \$397,899.5           | 3.8%               |
| 9 Subsidized housing           | \$266,784.0                                    | \$0.0                              | \$266,784.0           | 2.5%               |
| 10 Police                      | \$167,805.0                                    | \$0.0                              | \$167,805.0           | 1.6%               |
| 11 Fire                        | \$33,484.9                                     | \$0.0                              | \$33,484.9            | 0.3%               |
| 12 Emergency Medical Services  | \$42,710.0                                     | \$0.0                              | \$42,710.0            | 0.4%               |
| 13 Development-related studies | \$49,242.0                                     | \$18,005.2                         | \$31,236.7            | 0.3%               |
| 14 Civic improvements          | \$27,826.0                                     | \$0.0                              | \$27,826.0            | 0.3%               |
| 15 Child care                  | \$43,400.0                                     | \$0.0                              | \$43,400.0            | 0.4%               |
| 16 Health                      | \$11,793.0                                     | \$0.0                              | \$11,793.0            | 0.1%               |
| 17 Pedestrian infrastructure   | \$105,000.0                                    | \$33,050.0                         | \$71,950.0            | 0.7%               |
| <b>TOTAL</b>                   | <b>\$11,749,967.0</b>                          | <b>\$1,286,229.0</b>               | <b>\$10,463,738.0</b> | <b>100.0%</b>      |

The table provides a separate total for all services and covers the 10-year period, 2013–2022. Further details on the capital plans for each individual service category are available in Appendix B.

The development-related capital forecast is estimated at a total gross cost of \$11.75 billion. It is anticipated senior government grants, subsidies or other recoveries will total \$1.29 billion yielding a net cost of \$10.46 billion.

This capital forecast incorporates those projects identified to be related to growth anticipated in the next 10 years. It is not implied that all of these costs are to be recovered from new development by way of DCs (see the following Section VI for the method and determination of net capital costs attributable to growth). Portions of this capital forecast may relate to addressing existing deficiencies and for replacement of existing capital facilities (e.g. EMS station relocations) or for growth anticipated to occur beyond the 2013–2022 planning period. In addition, the amounts shown on Table 4 have not been reduced by 10% for various “soft” services as mandated by s. 5 (1) 8. of the DCA.

Of the \$10.46 billion in 10-year net development-related capital costs, 58% or \$6.04 billion is for the provision of engineered services: Sanitary Services is the largest single expenditure area at \$2.46 billion (23.5%) and includes various types of projects including upgrades to the Ashbridges Bay facility, the Highland Creek facility, and various trunk sewer linear works. Water services is the next most significant of the engineered services at \$1.41 billion (13.5% of total net costs) and includes various types of projects such as the Horgan plant expansion, upgrades to the R.L. Clark facility and various linear water works. The other two engineered services combined account for approximately 20.7% of the total net costs; with roads and related at \$1.16 billion (11.1%) and storm water management at \$999.5 million (9.6%). The roads and related projects occur throughout the City and include signalizations, grade separations, and various road improvement works.

Transit projects account for nearly 24.8% or \$2.60 billion, of the net costs, including \$1.12 billion related to the Spadina Subway extension (City share). The other \$1.47 billion provides for transit-related improvements and expansion across the City including vehicles for increased ridership, re-signaling improvements, the recovery of

Sheppard Subway, Union Station revitalization and various other transit-related works.

With respect to the remaining general services, Parks and Recreation has the largest net capital program at \$735.7 million (7.0%). The program includes a variety of park amenities, parkland development, additional pools, arenas, community centres, Pan Am Games facilities, and various other recreational facilities. This service category also provides for the development of various neighbourhood, district and regional (or City-wide) parks across the City.

The balance of the development-related capital program includes the recovery of additional Social Housing units, upgrades and improvements to the Toronto Public Library, expansions of Police stations, new child care centres, the continuation of the Places program, the construction of new EMS stations, new fire stations, a public health clinic, the completion of the north-west underground PATH system, and development-related studies.

### **C. WATERFRONT TORONTO AND PORT LANDS**

The Waterfront is one of the primary growth areas in the City of Toronto. It includes the Lower Don Lands, the West Don Lands, the East Bayfront, the Central Waterfront and the Port Lands. The residential and non-residential development in the Waterfront area necessitates a significant amount of municipal infrastructure. This infrastructure includes engineered services facilities that are required to service Waterfront development. However, the availability of vacant land and the central proximity of the Waterfront also makes the area a key location for new indoor recreation, parkland, daycare and other general services facilities. Consistent with the City's last DC study, capital projects in the Waterfront area identified in this study have been included within each of the appropriate City-wide service categories.

## **VI PROPOSED DCS ARE CALCULATED IN ACCORDANCE WITH THE *DCA***

---

---

This section summarizes the calculation of DCs for each service category and the resulting total DC by type of development. For City-wide services, the calculation of the “unadjusted” per capita (residential) and per square metre (non-residential) charges is reviewed. Adjustments to these amounts resulting from a cash flow analysis that takes interest earnings and borrowing costs into account are also discussed.

For residential development, the adjusted total per capita amount is then converted to a variable charge by housing unit type using various unit occupancy factors. For non-residential development, only one DC rate is proposed. The proposed non-residential charge is based on GFA of building space.

It is noted that the calculation of the City-wide DCs does not include any provision for exemptions required under the *DCA* such as the exemption for enlargements of up to 50% on existing industrial buildings. Such legislated exemptions, or other exemptions which Council may choose to provide, will result in loss of DC revenue for the affected types of development. Any such revenue loss may not be made up, however, by offsetting increases in other portions of the calculated charge.

As noted above, several new as well as a continuation of existing area-specific DCs are also included.

### **A. TOTAL 2013-2022 DC-RECOVERABLE SHARE OF THE NET CAPITAL PROGRAM**

The capital forecast for the DC-eligible services incorporates those projects identified to be related to growth anticipated in the next 10 years. However, not all of the capital costs are to be recovered from new development by way of DCs. Table 5 shows that \$4.88 billion of the capital forecast relates to replacement of existing capital facilities or for shares of projects that provide benefit to the existing community.

TABLE 5

**CITY OF TORONTO  
SUMMARY OF DEVELOPMENT-RELATED CAPITAL PROGRAM  
10-YEAR CAPITAL PROGRAM  
(in \$000s)**

| Service                        | Development-Related Capital Program 2013 -2022 |                             |                                 |                          |                      |                      |                      | Total DC<br>Eligible<br>Costs for<br>Recovery |
|--------------------------------|--|-----------------------------|---------------------------------|--------------------------|----------------------|----------------------|----------------------|---|

| 11 Fire                        | \$33,484.9                                     | \$450.0                     | \$0.0                           | \$0.0                    | \$0.0                | \$0.0                | \$33,034.9           |   |
| 12 Emergency Medical Services  | \$42,710.0                                     | \$8,718.9                   | \$3,399.1                       | \$0.0                    | \$12,438.7           | \$12,438.7           | \$18,153.3           |   |
| 13 Development-related studies | \$31,236.7                                     | \$3,728.3                   | \$2,750.8                       | \$0.0                    | \$0.0                | \$0.0                | \$24,757.6           |   |
| 14 Civic improvements          | \$27,826.0                                     | \$4,173.9                   | \$2,365.2                       | \$0.0                    | \$0.0                | \$0.0                | \$21,286.9           |   |
| 15 Child care                  | \$43,400.0                                     | \$0.0                       | \$4,340.0                       | \$0.0                    | \$0.0                | \$0.0                | \$39,060.0           |   |
| 16 Health                      | \$11,793.0                                     | \$5,660.8                   | \$613.2                         | \$0.0                    | \$0.0                | \$0.0                | \$5,519.0            |   |
| 17 Pedestrian infrastructure   | \$71,950.0                                     | \$39,572.5                  | \$3,237.8                       | \$0.0                    | \$8,508.8            | \$8,508.8            | \$20,630.9           |   |
| <b>TOTAL</b>                   | <b>\$10,463,738.0</b>                          | <b>\$4,880,096.2</b>        | <b>\$229,670.8</b>              | <b>\$409,644.1</b>       | <b>\$1,557,971.2</b> | <b>\$1,557,971.2</b> | <b>\$3,386,355.7</b> |   |

This amount relates to shares of projects that are replacing existing facilities (i.e. relocation and expansion of EMS stations), addressing existing deficiencies (i.e. share of basement flooding remediation projects), and recognized benefit to existing taxpayers (i.e. Union Station refurbishment). These portions of capital costs will have to be funded from non-DC revenue sources.

An additional share of \$1.56 billion is attributable to growth beyond the 2022 period and is considered committed excess capacity (and will therefore be considered for recovery under future development charge studies).

The DCA, s. 5. (1) 8., requires that development-related net capital costs for “general” services be reduced by 10% in calculating the applicable DC. The discount does not apply to the fire, police, roads, water, sanitary sewer, storm water management services or the Spadina Subway expansion. The 10% share of development-related net capital costs not included in the DC calculation must be funded from non-DC sources. In total, about \$229.67 million is identified as the required 10% reduction.

The discounted net development-related capital cost is \$3.39 billion.

This amount is allocated between the residential and non-residential sectors to derive the unadjusted DCs, as shown in Table 6. Parks and recreation and library services are all deemed to largely benefit residential development with 95% of the costs allocated to residential development. Subsidized housing has been fully allocated to residential development while pedestrian infrastructure is mostly, 80%, allocated to non-residential development. The balance of the services is allocated 66% to residential and 34% to non-residential sectors based on shares of population and employment growth (see Appendix B). Approximately \$2.43 billion of the DC net discounted capital program is deemed to benefit residential development. When this amount is divided by the 10-year population growth in new units (241,762), an unadjusted charge of \$10,033.28 per capita is derived. The non-residential share of the general services capital program totals \$960.69 million and when this amount is divided by the 10-year forecast of non-residential space growth (5.2 million sq. m) an unadjusted charge of \$184.75 per square metre is derived.

TABLE 6

CITY OF TORONTO  
SUMMARY OF UNADJUSTED RESIDENTIAL AND NON-RESIDENTIAL DEVELOPMENT CHARGES

|  |           |
|--|-----------|
| 10 Year Population Growth in New Units | 241,762   |
| 10 Year Growth in Non-Residential sq.m | 5,200,000 |

## **B. ADJUSTED RATES FOR CITY-WIDE RESIDENTIAL AND NON-RESIDENTIAL DCS**

Final adjustments to the “unadjusted” DC rates summarized above are made through a cash flow analysis. The analysis, details of which are included in the appendices, considers the borrowing cost and interest earnings associated with the timing of expenditures and DC receipts for each service.

Table 7 summarizes the results of the adjustment for the residential and non-residential components of the City-wide rates. As shown in Table 7, the adjusted per capita rate is \$10,015.27 after the cash flow analysis, a minor decrease from the unadjusted charge. Table 7 shows that the adjusted rate for non-residential development increases slightly to \$186.27 per square metre.

## **C. PROPOSED CITY-WIDE RESIDENTIAL AND NON-RESIDENTIAL DCS**

Residential City-wide DCs are proposed to vary by dwelling unit type to reflect their different occupancy factors and resulting demand for services. The proposed residential and non-residential DCs for City-wide services are shown in Tables 8 and 9 respectively. As shown in Table 8, the proposed residential charge for DC eligible services ranges from \$16,027 for small apartments to \$37,457 for single-detached and semi-detached units. The proposed charge for rows (and other multiple units) is \$30,648 and \$23,036 for large apartments. The City has a charge for a “dwelling room” which is calculated at \$10,018.

The proposed non-residential DC for City-wide services is \$186.27 per square metre of GFA (see Table 9).

## **VII COMPARISON OF PROPOSED AND EXISTING DCS**

Tables 10 and 11 present a comparison of total proposed City-wide DCs for a large apartment unit and per square metre with the City's existing charges (as at June 2013).

Table 10 shows that the calculated charge per large unit of \$23,036 will produce an increase of \$10,624 over the present DC. The 86% increase is caused by several factors. Firstly, more extensive capital programs exist for several services (e.g. Waterfront related infrastructure). Secondly, there has been a considerable increase in the capital costs for all City services. The inflation adjustment factor that is prescribed by *O. Reg. 82/98* and which the City uses has not adequately reflected the increase in capital costs that is being experienced in the municipal sector. This is particularly evident for City-wide engineering. Lastly, the 86% increase is represented by the City's current charge, which was discounted, and has not yet been fully phased-in to the maximum Council approved charge.

Table 11 shows the change calculated for the non-residential charge. The proposed charge of \$186.27 per square metre represents an increase of about 32% (\$45.11) over the existing rate of \$141.16.

## **VIII LONG-TERM CAPITAL AND OPERATING COSTS**

---

---

This section provides a brief examination of the long-term capital and operating costs for the capital facilities and infrastructure to be included in the DCs by-law. This examination is required as one of the features of the *DCA*.

### **A. NET OPERATING COSTS FOR THE CITY'S SERVICES ARE ESTIMATED TO INCREASE BY \$541.24 MILLION BY 2022**

Appendix D summarizes the estimated increase in net operating costs that the City will experience for additions associated with the planned capital program. These estimates are generally based on average costs derived from the 2013 Capital Budget.

By 2022, the City's net operating costs are estimated to increase by \$541.24 million. Significant increases in net operating costs will be experienced as new facilities such as community centres and transit lines are opened. Operating and maintenance costs will also increase as additions to the City's road network and parkland and playing fields are made. Appendix D provides a breakdown of the increased operating costs by service.

### **B. LONG-TERM CAPITAL FINANCING FROM NON-DC SOURCES TOTALS \$5.11 BILLION**

Appendix D also summarizes the components of the development-related capital forecast that will require funding from non-DC sources as discussed above in Section VI. In total, \$5.11 billion will need to be financed from non-DC sources over the next 10 years. In addition, \$1.56 billion in interim DC financing, may be required. Because DC by-laws must be revisited at least every five years, however, it is difficult to determine the quantum of interim financing that may be necessary. Appendix D provides a breakdown of the non-DC financing requirements by service.

The share of the development-related capital forecast requiring funding from non-DC sources consists of two components. The most significant, at \$4.88 billion, is related to replacement of existing City facilities with newer and larger facilities that

will benefit the existing community. An additional \$229.67 million is identified as the mandatory 10% discount for certain City-wide general services. Council is made aware of these factors so that they understand the operating and capital costs that will not be covered by DCs as it adopts the development-related capital forecast set out in this study.

## **IX DC ADMINISTRATION**

---

### **A. DC POLICIES AND PRACTICES**

No significant changes are recommended to the City's current policies and practices regarding DC administration. Considering the requirements of the *DCA*, the following recommendations are made:

- It is recommended that present practices regarding collection of DCs and by-law administration continue to the extent possible, having regard to any requirements of the *DCA*;
- As required under the *DCA*, the City should codify any rules regarding application of the by-laws and exemptions within the DC by-laws proposed for adoption;
- It is recommended that the City continue to actively encourage the use of front-ending agreements or developer agreements (and services-in-lieu arrangements), whichever are practical and desirable by the development industry and the City;
- It is recommended that the by-laws permit the payment of DCs in cash or through services-in-lieu agreements. The municipality is not obligated to enter into services-in-lieu agreements;
- It is recommended that Council adopt the development-related capital forecast for City-wide and area-specific services included in this background study, subject to annual review through the City's normal capital budget process.

### **B. CITY-WIDE VS. AREA-SPECIFIC CHARGES**

The City has made a policy decision to continue with the use of uniform City-wide DCs.

- The City's previous DC by-law, passed in 2004, was in the form of a uniform, City-wide charge. Section 4 of the Executive Summary of the April 21, 2004 DC Background Study explained the policy rationale, as follows:

“Most municipalities in Ontario have established uniform, municipal-wide development charges. When area-specific charges are used, it is generally to underpin master servicing and front-end financing arrangements, particularly in the case of stormwater management, collector/minor arterial roads and/or water and sanitary feeders and related works sometimes identified in defined “greenfield” development circumstances.

The use of area-specific charges in a mature urban area is uncommon for several reasons, i.e.:

Continued growth in the central area, for example, triggers the need for transportation, water and sewer processing, recreation and other needs throughout the City;

The calculation and updating of area-specific charges in portions of a large metropolitan area is difficult;

The City requires the full development charge contribution from all development as part of funding the substantial capital works program needed to permit growth to occur, without eroding service levels.”

- The City’s 2008 DC background study examined the use of area-specific charges in Waterfront Toronto and arrived at the following conclusions:
  - Waterfront planning and servicing cost arrangements have now advanced to the stage where a much more complete servicing program can be included in the DC program, particularly in the case of East Bayfront and Don Lands precincts. A decision is required as to whether the charge is to be area-specific or part of the uniform, City-wide calculation. Three reasons supporting an area-specific charge were advanced in 2004, as part of the initial consideration of the matter. These reasons were:
    - a) “... to ensure that development in that area pays a development charge specifically geared to funding some or all of the substantial infrastructure program required by that development area.”
    - b) “This will also ensure that the charges collected from Waterfront development ... will be allocated to Waterfront infrastructure projects.”
    - c) “It will also enable a higher proportion of DC funding to be directed toward Waterfront projects, because of the reduced benefit to existing development attribution, compared to the rest of the City.” (p. 6-12)
  - Based on further consideration of these matters in terms of the specifics of the Waterfront servicing programs which have emerged, the 2008 DC study concluded that continued use of a uniform, City-wide DC (uniformly embracing the Waterfront and the rest of the City) is the preferred approach. The reasons for this position in terms of the three objectives noted above are as follows:

- a) While some of the Waterfront servicing needs are specifically referable to that area alone, other needs also benefit growth elsewhere in the City and are difficult to segregate between two geographical areas. Also, since its creation, the City has applied development charges uniformly, without varying them in an attempt to account for geographically-based servicing cost differences. This is the most widely used municipal approach in Ontario and beyond and the one proposed for continued use in Toronto.
  - b) Waterfront DC collections can be earmarked and exclusively directed toward the funding of Waterfront infrastructure projects; however, it may be more prudent to leave the City with the full discretion as to the way in which it prioritizes development-related needs and DC reserve fund draws.
  - c) In the 2008 DC Background Study, Waterfront infrastructure projects were shown as part of a separate sub-heading under each individual service which is directly applicable to the Waterfront. In doing so, appropriately (low) benefit to existing development deductions have been made. However, in cases where the City's capital forecast takes it beyond the 10-year service level cap under the DCA (e.g. parks and recreation), Waterfront DC project inclusions have been scaled back or eliminated, as they are to be significantly funded from other sources.
- In this DC Background Study (2013), infrastructure projects related to the Portlands or Waterfront Toronto have been shown as part of a separate sub-heading under each individual service which is directly applicable to, and located in, the Toronto Waterfront and Portlands.

### **C. DC BY-LAW PROVISIONS**

The proposed draft by-law is available under separate cover and all by-law provisions are provided in the draft. The City is proposing to modify a few provisions of the DC by-law, some of which include:

- No significant changes are recommended to the City's current policies and practices regarding DC administration. Considering the requirements of the DCA, the following recommendations are made for Council's consideration:
- It is recommended that present practices regarding collection of DCs and by-law administration continue to the extent possible, having regard to any requirements of the DCA;

- As required under the *DCA*, the City should codify any rules regarding by-law application and exemptions within the DC by-law proposed for adoption;
- Under the City's current DC by-law, "Places of Worship" are exempt from the payment of DCs. The intent of the exemption is to relieve from the payment of DCs for floor area used for regular assembly of persons to practice religious worship, services or rites. The City has experienced some difficulties with the application of the exemption due to timing issues and determining what building, or portions of a building, should be exempt. The proposed new DC by-law contains a new definition of "Places of Worship" that is intended to provide clarity on the application of the exemption;
- The City's current DC By-law provides an exemption from the payment of DCs for dwelling units qualifying for a grant under the Residential Rehabilitation Assistance Program (RRAP). The RRAP program has been discontinued by the Federal Government as of March 2012. As such, the RRAP exemption will also be discontinued in the new DC by-law;
- The City's current DC by-law provides for a reduction in DCs for certain projects completed under the Toronto Green Standard; projects meeting Tier 2 of the Toronto Green Standard are eligible for a 20% refund of the DCs paid. The proposed new DC by-law provides for a fixed incentive amount rather than a percentage of DCs paid; and
- The City's current DC by-law provides an exemption from the payment of DCs for certain non-residential land uses (i.e. industrial uses, IMIT exemptions, etc.), and it is proposed that these exemptions are carried forward unchanged in the new by-law.

#### **D. POTENTIAL ECONOMIC IMPACT OF DCs**

- Although not conclusive, empirical evidence and academic literature conclude that the land development industry is a complex economic environment involving multitudes of players (i.e. landowner, developer, construction industry, sellers and buyers) and that changes in prices are borne by all or several of those involved, depending on the status of the land market. In general, during a strong housing market, it appears that increase in residential DCs has a limited to no impact on the rate of housing construction. Certain types of non-residential land uses, in particular industrial use, can be impacted by changes in upfront charges involving DCs. Population-related land uses, i.e. retail use, are not overly sensitive to increases in DCs.

- The City commissioned a study in 2004 by Professor David M. Nowlan to assess the economic effects of the calculated 2004 City of Toronto DCs. The study concluded that:
  - Most of the increased DCs would be borne by the owners of developable land;
  - Competition from existing dwelling stock will restrain the extent to which selling prices can be raised to recover the higher charge;
  - Higher DCs will permit tangible savings in property taxes and user charges, although developers may compensate for this via increased selling or rental prices by a small magnitude;
  - The possibility of the increased charge being passed forward to consumers is much higher in unique locations such as the central area.
- The City's 2008 DC study summarized the results of previous research (including analysis of Professor David M. Nolan) concerning the potential impact of (increased) DCs on economic development:
  - There are two fundamentally different ways of viewing the City's current comparatively low DCs. The first view is that this is sound policy reflecting the City's cost economies of scale as well as enhancing its competitive position in attracting residential, commercial, and industrial growth. The second opposing view is that higher DCs would not tangibly inhibit growth and that the City is failing to fully utilize this significant capital funding source. As a result, its tax levy and water/sewer rates are higher than would otherwise be necessary and/or needed works are being deferred.
  - Many municipalities impose the full residential DC and, in some cases, discount or exempt only a portion of their non-residential (i.e. industrial/commercial) charges, in the interests of attracting more of such development. Their policy position, implicitly or explicitly, is that the rate of industrial and/or commercial development may be impacted by the quantum of their DCs. Their actions suggest that this is not the case with residential development, or at least that the "growth pays for growth" philosophy is expected to be more operative in that case.

#### **1. Residential Development Impacts**

- A change in DC quantum is thought by some to reflect itself directly and automatically on house prices. However, in the strong market experienced for years in Toronto, house prices reflect demand pressures, more than a simple cost recovery formula. DC increases are absorbed in pricing (and/or land purchase) but may not always be a significant detriment of such prices due to overall market dynamics. However, in poor markets house prices may be unable to absorb DC increases. As

a result, DC increases may impact profits and/or construction activity. Over a longer period of time, DC increases may result in compensating land price decreases, where the selling price of the final product cannot be increased sufficiently. This is particularly the case where there is a high “value-add” to the undeveloped land value.

- The potential impact of DC quantum shifts on the residential housing market is also impacted by the competitive environment and by the price and nature of the housing involved. For example, Toronto is surrounded by four Regions which impose much higher DCs; however, land costs, building forms, the planning process, ease of construction, tax rates, municipal and commercial service levels and lifestyle also vary significantly between these two markets. It is the cumulative effect of these socio-economic forces which determines whether a significant addition to Toronto’s residential DCs will diminish its rate of residential growth. This, in turn, raises the question of whether a small reduction in residential growth, resulting from an increase in DC quantum which better equips the City to fund its growth-related servicing needs, is an acceptable trade-off.
- When one plots DC quanta against residential development activity amounts in different municipalities, an indirect cost and effect relationship is not apparent. That is, in part, because municipalities which are attractive high-growth areas, are able to impose high DCs as part of maintaining high service levels. Municipalities with lower market appeal tend to moderate DCs in the hopes of encouraging more growth. However, the primary detriments of the amount of residential development in a municipality generally relate more to serviced/zoned land availability, amenity/lifestyle, access to job opportunities, development industry focus, etc.

## **2. Industrial/Commercial Development Impacts**

- The City is currently not imposing industrial/office/institutional DCs, although the Toronto Catholic District School Board does impose education DCs. The City is one of the very few major municipalities in Ontario not imposing development charges on these forms of development.
- The decision as to whether or not Toronto should establish industrial/office/institutional DCs and, if so, how high they should be and whether they should vary between industrial and commercial uses is an important policy issue. Essentially, it involves the trade-off between increased capital contributions (which must otherwise come from property taxes and/or user rates) and a potential deterrent of indeterminate size to new and expanded development activity within the City.
- The potential impact of DC quantum shifts on the industrial and commercial market is also impacted by the competitive environment and by the price and nature of the development involved. For example, Toronto currently waives DCs

for industrial and office development, but imposes substantially higher municipal taxes on these properties than surrounding municipalities. Land costs, building forms, the planning process, ease of construction, tax rates, municipal and commercial service levels and lifestyle also vary significantly between those two markets. It is the cumulative effect of these socio-economic forces which determines whether a significant increase to Toronto's industrial and office DCs will diminish the rate of growth. Since DCs provide a one-time contribution, while property taxes establish an ongoing revenue stream to municipalities, this, in turn, raises the question of whether a reduction in industrial and office development, resulting from an increase in DCs, improves or diminishes the City's financial position.

- Industrial and commercial properties are generally acknowledged as paying more in property taxes than the cost of the municipal services they consume. It is this net positive contribution to municipal revenues that helps support the services and programs the City provides to its residents. The long-term fiscal sustainability of such municipal services is therefore benefited by maintaining a strong industrial and office property tax base.
- Municipalities are generally more concerned with attracting industrial/office development than residential, because the former brings local jobs, commercial services, no increased need for some municipal services, economic stimulus and more highly taxed assessment.
- In this regard, industrial and head office development is often given added attention, in comparison with retail and service sector employment, which is generally "population-related." Also, "major destination retail" which serves the entire GTA, differs somewhat from community-specific retail services. The latter is more related to urban population centres than industry (for example, the automotive industry, which has located plants in smaller communities such as Alliston, Cambridge and Ingersoll).
- Industrial site selection analysis generally focuses on non-financial matters, such as transportation access to markets, proximity to labour and suppliers, quality of life/image/amenity and the sustainability of the available real estate. Financial matters are often less important and relate more to land and construction costs, as well as property tax and utility rate costs. DCs are a relatively small component of the latter but at the margins can have an impact on a cumulative basis, particularly where property taxes are high, as in Toronto.
- Notwithstanding the fact that Toronto has the lowest DCs for industrial and commercial development of any municipality in the GTA, the City has experienced a steady decline in industrial employment. In the face of this trend, can the City afford to establish DCs for such uses? The financial answer to the question lies, in part, with the trade-off between the one-time DC revenue figure

and the long-term, net property tax surplus stream created by new non-residential development.

- “Market optics” can play a role in a municipality’s ability to attract industrial/commercial development. This often relates more to planning approval matters, but having no DCs or heavily discounted DCs can be part of sending out a favourable message — once again at a price.
- Some of the ways that are sometimes used to moderate the negative impacts of non-residential DCs include transition measures such as:
  - “Grandfathering” certain types of previous approvals;
  - Providing a “grace period” for the introduction of the charge;
  - Phasing in the increase in the charge over a period of years;
  - Leaving the indexing of the charge as a discretionary annual decision and one which can be waived by Council in poor economic periods;
  - Fully or partially exempting those types of development likely to be most negatively impacted by a DC increase (subject to difficulties involved in distinguishing one type of development from another at the point of DC collection).
- The City has, in the past, used a number of these measures. It is evident that all of these measures involve sacrificing capital revenues that must be generated from other sources in order to provide the real estate and development market with sufficient opportunity to adjust to any significant change in DC quantum or policy. This is particularly the case in the event of a significant economic downturn relating to international financial turbulence.

#### **E. LOCAL SERVICE DEFINITIONS**

- The City has undertaken a review of the development-related projects and costs. This review process has included the examination of its local service policies and recoveries and shares to be funded through DCs.
- The reason for establishing this local services definition and policies is to determine the capital costs eligible for inclusion in the DC calculation for the City. The functions or services deemed to be local in nature are not to be included in the determination of the DC rates. The provision of local services is considered to be a direct developer responsibility under s.59 of the DCA and will (or may) be

recovered under other agreement(s) with the landowner or developer. Appendix E provides the City's updated local service definitions and associated policies.

**APPENDIX A**  

---

***CITY OF TORONTO***  
***GROWTH FORECAST***

## **GROWTH FORECAST**

---

---

This appendix provides the details of the growth forecast used to prepare the DC study. It provides a description of the forecast method and key inputs and assumptions. The results of the forecasts are provided in a series of tables which follow.

The forecasts of population, households and employment for the City of Toronto have been prepared within the context of the recently released growth forecasts for the Greater Golden Horseshoe (GGH) prepared for the Ontario Ministry of Infrastructure. The forecast review was undertaken as periodically required by the *Growth Plan for the Greater Golden Horseshoe*, and in this case was an update and review of the forecasts in Schedule 3 to the *Growth Plan*. Official plans in the GGH, including the *City of Toronto Official Plan*, are required to conform to the Schedule 3 forecast. At the time of writing, the proposed amendment to the *Growth Plan* mandating a new growth forecast has not yet been approved by the Province.

Notwithstanding that the new growth forecast has yet to be finally approved by the Province as part of the *Growth Plan* and, therefore, not yet incorporated into the *City of Toronto Official Plan*, this forecast has been used as the basis for the DC study. Use of the updated forecast is appropriate because:

- The old forecasts are now dated, having been published in 2005 based on 2001 Census data; and
- Growth patterns in the City of Toronto have changed significantly since the earlier forecast, primarily due to the unprecedented condominium apartment construction boom that has been far larger than the growth anticipated in the 2005 work.

The next section of this appendix provides a brief overview of the forecast to provide a larger context for the growth forecast. This is followed by a section addressing the population and housing forecast and then a section on employment and non-residential space. The appendix concludes with a series of tables providing the relevant forecast results.

## A. FORECAST OVERVIEW

The City of Toronto is the central city and the major economic and employment concentration of the metropolitan Greater Toronto and Hamilton Area (GTHA), accounting for 45% of the employment in the area and about 40% of its nearly 7 million population. The GTA itself is the centre of the larger urban region of the GGH housing over 9 million people.

After several decades of metropolitan growth concentrating in the suburbs surrounding Toronto, the City has returned to a much larger share of new development. In recent years, Toronto has emerged as North America's largest market for high-rise apartment development, with nearly 200 projects totalling over 43,000 units under construction at the end of 2012. The resurgence of the downtown office market, after 20 years of relatively slow growth, is further evidence of the renewed attraction of the City for both business investment and high-density living.

As a result of past development, and unlike most of the 905 area, Toronto's land supply is nearly fully developed. Aside from a small amount of greenfield land in north-east Scarborough, there are few opportunities to provide a large supply of new development sites. From a development perspective, this means that most of the City's future growth in population and employment will be accommodated through a more intensive use of the existing land and building supply, including higher-density residential development, office development and commercial redevelopment.

This pattern of growth, in particular the reliance on more intensive forms of development, will have many effects on land use and infrastructure planning, and therefore, the municipal corporation as whole. New projects will become ever more complex and contentious. The City's infrastructure will also need to be maintained, replaced and expanded to accommodate growth, which in some cases will have major municipal finance implications. The following forecasts have been prepared to provide the City of Toronto staff and Council with the information base that is required to effectively plan ahead for these challenges and fund necessary new infrastructure.

## B. POPULATION AND HOUSING FORECAST

The forecast approach is structured, in part, as a “top-down” model so that the Toronto forecasts will reflect trends occurring across the economic region, such as recent rises in fertility rates, the continued decline in mortality rates and the current levels of immigration to the region. A number of “bottom-up” factors, however, are also incorporated in the forecasts, the most important of which for the City of Toronto is the nature of the land supply and anticipated future pattern of growth; that is, most of the City’s growth will occur in medium- and high-density development forms. A range of data sources have been used in the forecast, including:

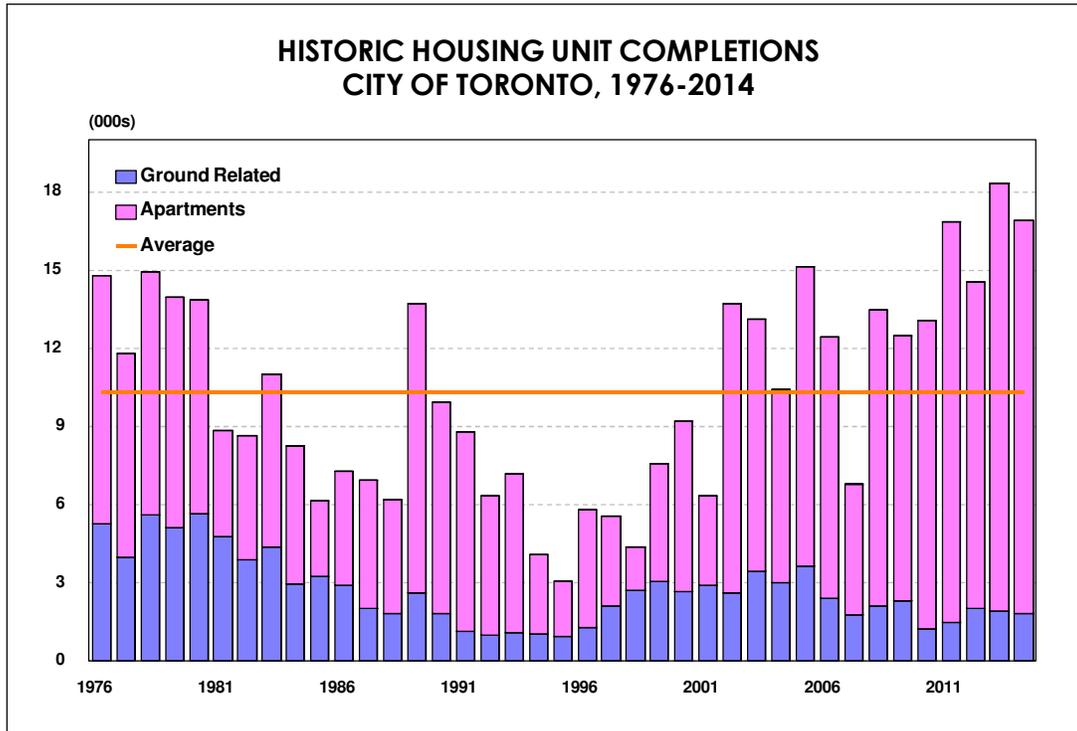

- *Greater Golden Horseshoe Growth Forecasts to 2041, Technical Report*, November 2012, prepared by Hemson Consulting Ltd. for the Ontario Ministry of Infrastructure. This report in turn relies on a wide range of Census data, other Statistics Canada data and a range of local inputs.
- All 2006 Census data for the GTHA and Toronto as well as the available information from the 2011 Census.
- Statistics Canada building permit data on the value of non-residential permits as a basis for the forecast of non-residential space growth.
- The City’s housing and employment data to the most current available.
- Current CMHC housing data to best estimates of housing unit growth and housing market shares in terms of housing completions, housing starts and units currently under construction.
- Updated information for office space construction and employment land development as input to employment and non-residential space forecasts.

The population forecast for the City of Toronto, contained in the *GGH Growth Forecasts to 2041*, begins with the preparation of a housing forecast; future housing growth is determined by applying market shares to the overall GTHA housing growth; and a forecast of average household size is then applied to the housing forecast to determine the overall population. The forecast also takes into account the different types of intensification which will occur over the period, including: infill, redevelopment and higher-density development on existing designated sites. The

housing supply is focussed on the opportunities for intensification through a limited number of lower-density units, somewhat more medium-density supply potential and a large supply of high-density units.

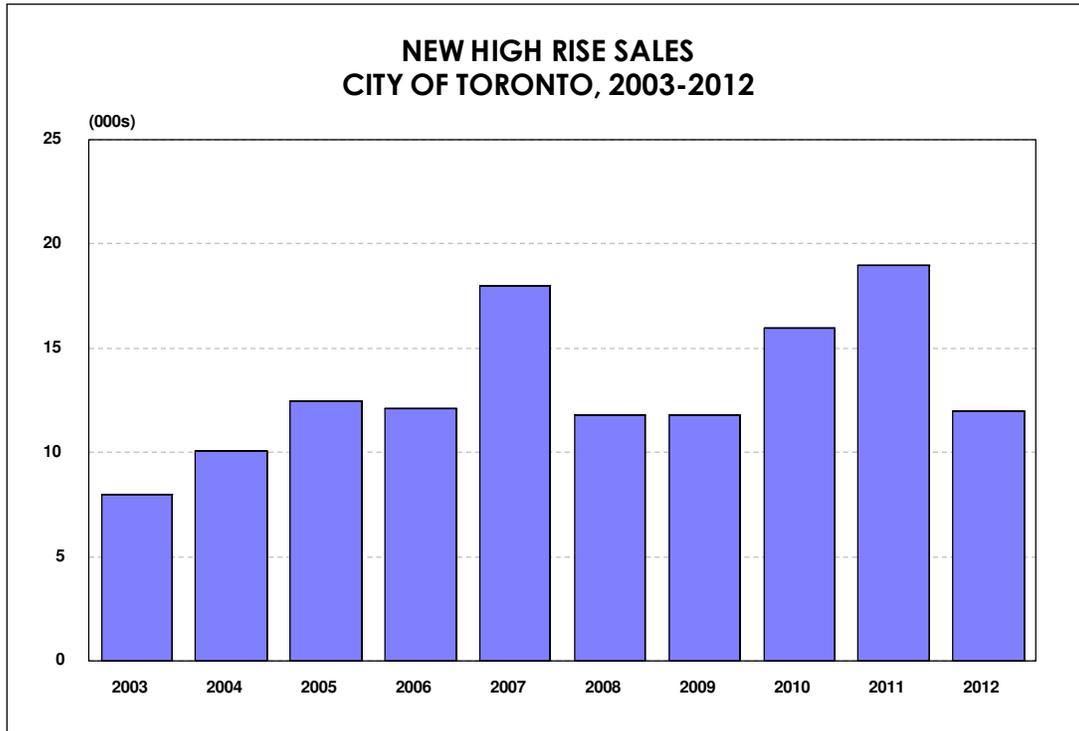

While the basis of the longer-term forecasts to 2031 and 2041 is provided in the new GGH forecasts, the specifics of the 10-year forecast which provides the basis for the City of Toronto's DC is not so much dependent on the longer-term trends in growth as it is on the short and medium considerations in the real estate market, particularly for condominium apartments. As the background work to the DC study was being prepared during 2012 and into 2013, there has been increasing anxiety about the near-term future of the condominium apartment market. The anxiety arises, in part, because of the extraordinarily high level of construction in recent years and the fact that the current real estate market cycle has continued far longer than is typically expected.

The historic housing completions data is shown in the graph below. The data through to the end of 2014 are shown in the historic data, since for apartment construction over the next two in total can be estimated with a high level of certainty as a result of the known number of units currently under construction.

Source: Hemson Consulting Ltd., based on CMHC Housing Market Tables.

Looking forward to new construction, new sales also provide a good measure of the direction of the market. The annual high rise sales are shown for the past 10 years in the graph below. The numbers will not be well-aligned with new construction activity since new sales include both pre-sales for new projects as well as sales from projects currently under construction or from inventory in completed buildings. It is, however, a good indicator of the market trend. In the graph, 2012 is shown to be down to the levels of 2005, 2006, 2008 and 2009, which are significantly lower than the record sales levels of 2007, 2010 and 2011. At the same time, the data do not indicate a market “crash” of the type that occurred in the early 1990s in Toronto or in a number of the US and international markets in the latter part of the 2000s.

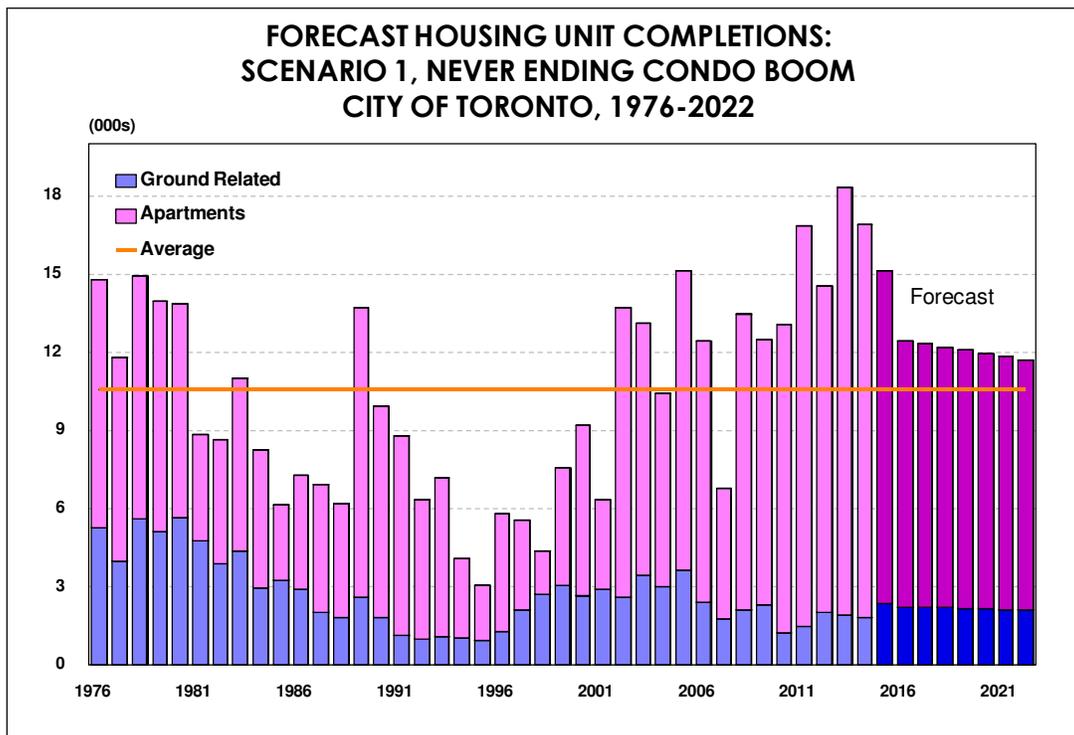

Source: Hemson Consulting Ltd., based on RealNet Canada Inc. data.

In preparing the residential forecast, we considered three scenarios for residential growth:

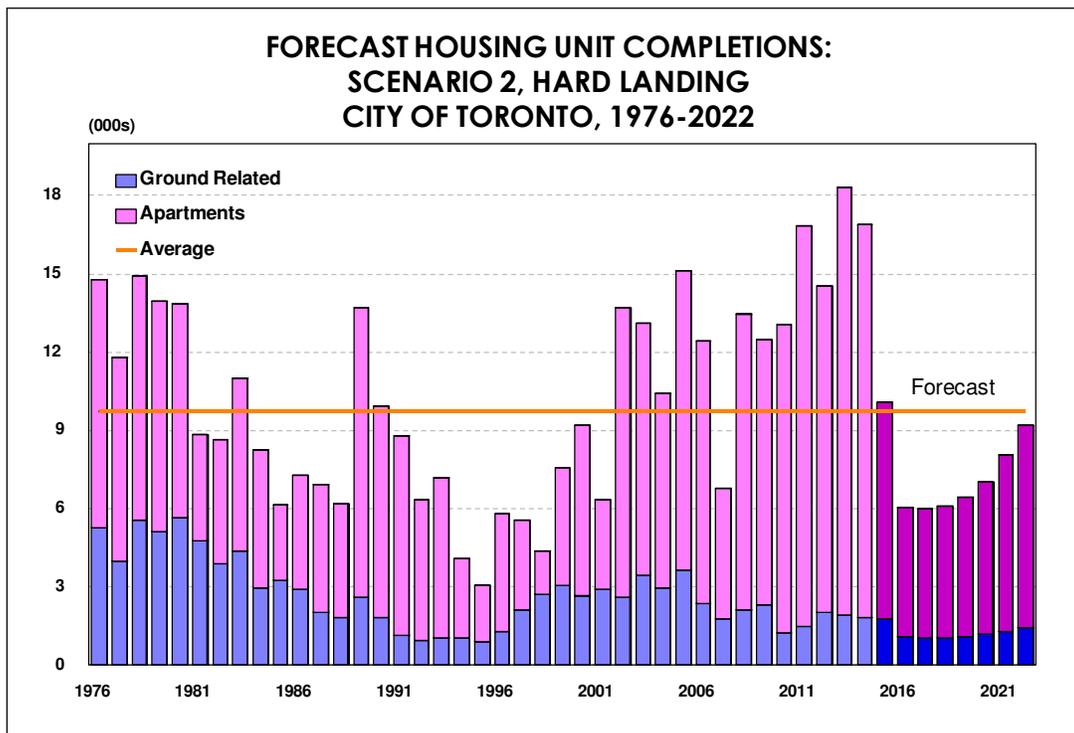

- Scenario 1, a “never-ending condo boom”;
- Scenario 2, a “hard landing” of the market; that is, a steep decline in construction of the type experienced in the early 1990s; and
- Scenario 3, a “soft landing”; that is, a return to more “normal” levels of development, but without the “crash” and recovery.

These three scenarios are shown in the following graphs.

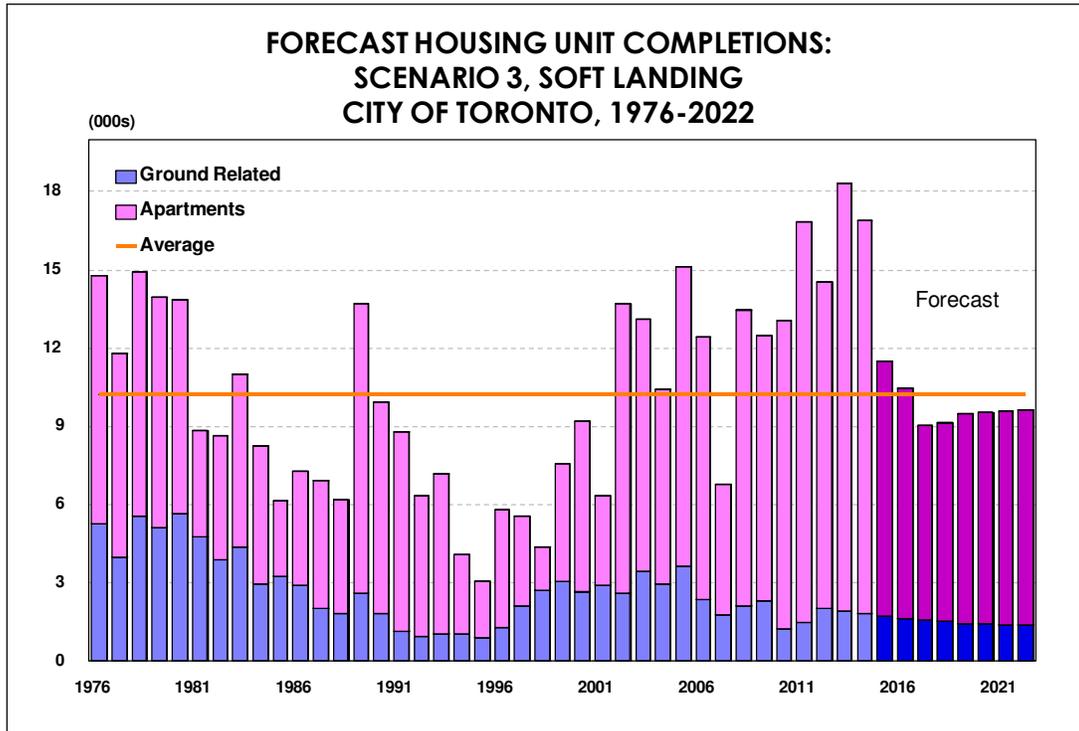

Source: Hemson Consulting Ltd., based on CMHC Housing Market Tables.

This scenario is considered unlikely given the underlying demographics of housing demand — while the GTAH continues to grow rapidly, there is not sufficient growth in population seeking apartment units for the recent boom to continue indefinitely. The key conclusion to draw from this scenario is that even under this highly optimistic scenario, the level of unit completions would still be below the recent market peaks. There simply is not a reasonable scenario that would have development continue at those record levels.

Source: Hemson Consulting Ltd., based on CMHC Housing Market Tables.

Scenario 2 is based on a significantly short-term market correction before a recovery occurring toward the end of the forecast period. While this type of scenario does remain a distinct possibility, the data available to date do not indicate that this is the direction of the housing market. This scenario would also not be very useful for DC purposes, since the purpose of the DC study is to establish a fair rate to pay for growth-related infrastructure, a calculation based on minimal growth (and therefore minimal infrastructure need) would not be helpful toward this end.

Source: Hemson Consulting Ltd., based on CMHC Housing Market Tables.

Balancing the considerations above, the soft landing approach of Scenario 3 is the most reasonable approach for the DC growth forecast. It provides a reasonable basis to establish infrastructure needs and a fair charge and is consistent with the market data available at the time of writing.

Key conclusions arising from the population forecast are as follows:

- The market shares of single and semi-detached units are forecast to remain slow but steady over the forecast period, reflecting the nearly fully built-out nature of the City's land supply. Based on the provision of additional units through small-scale infill, singles and semis are forecast to be about 8% of the City's housing market, averaging 760 units per year housing starts over the 10-year forecast period.
- The market shares of rowhouses are forecast to increase slightly, to reflect the City's continued attraction of this form of residential redevelopment but in the presence of limited supply opportunities. Rows are forecast to rise from

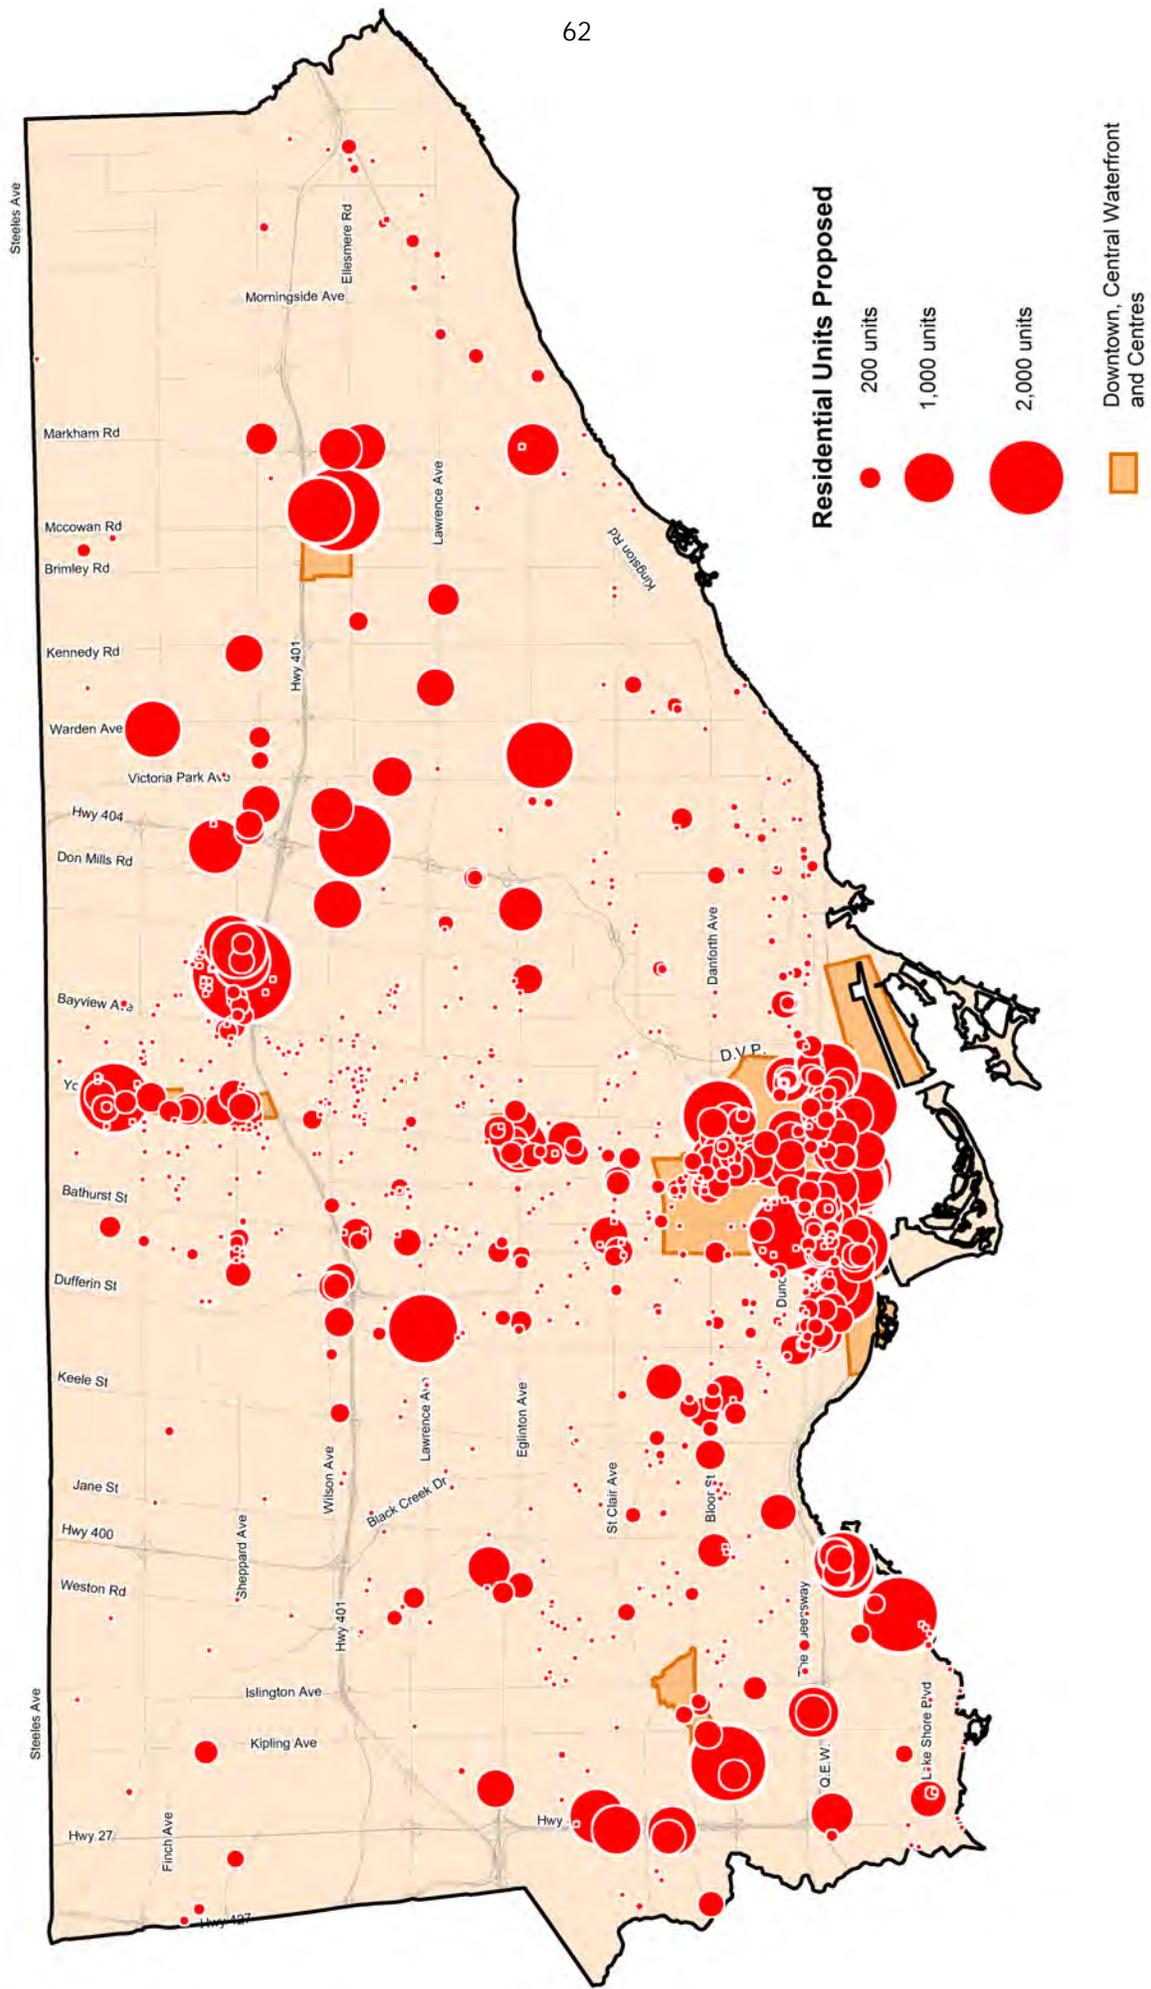

about 7.2% to 8.5% of the City's housing market over the forecast period. The result is an average of about 8% of the City units and 770 units per year housing starts over the 10-year forecast period.

- 84% of new housing units in the City over the period is forecast to be apartments, consistent with existing shares. This amounts to just over 8,000 units per year, well less than the 12,800 starts over the past 10 years, but consistent with the 25-year historic average of 8,700 unit apartment starts annually.

The population forecast is determined by applying a projected average household size for the entire housing stock to the forecast total housing units. Average household size is anticipated to decline slightly over the forecast period from 2.45 in 2013 to 2.42 by 2022. In the past, average household sizes had declined more significantly over time due to a range of demographic changes. The historic declines are now expected to stabilize as a result of shifts in household formation rates (more young adults are living with their parents for longer than in the past). As well, rising fertility and declining mortality rates generally result in more people being housed in the same number of households.

The location within the City of new residential development and, therefore population growth, is expected to follow the patterns of recent years with a significant concentration in the downtown area and the planned major centres. The current applications in the development pipeline shown on the map on the following page indicate a continuation of the pattern of a downtown concentration and significant development in the North York, Scarborough and Etobicoke Centres as well as Yonge–Eglinton. As well, there is development proposed in a number of other locations, mostly along the official plan's "Avenues" and, particularly, along the Sheppard Subway corridor.

Details on the housing and population are provided in the tables in the last section of the appendix.

### C. NON-RESIDENTIAL SPACE FORECAST

Even more so than population, the nature of employment growth in Toronto is also affected by the land supply. The City of Toronto is unique within the GTHA because its employment land supply is almost fully developed. Unlike 905 communities, the City of Toronto's ability to accommodate new employment growth depends heavily on the ability of existing developed areas to accommodate employment growth through more intensive use, reuse and redevelopment of the developed land and building supply.

This condition results in a complex relationship between investment, job growth and use of existing buildings in the City. Because the employment base in Toronto is so large, even small shifts in factors such as floor space per worker can have a significant effect on total employment. Because of this relationship, the market for new investment is driven more by the dynamics of the land and building supply rather than overall metropolitan demand for space. Major offices will play an increasingly important role in accommodating growth and the City will continue to accommodate employment growth in the form of retail and institutional services to the resident population. Key conclusions arising from the employment forecast are as follows:

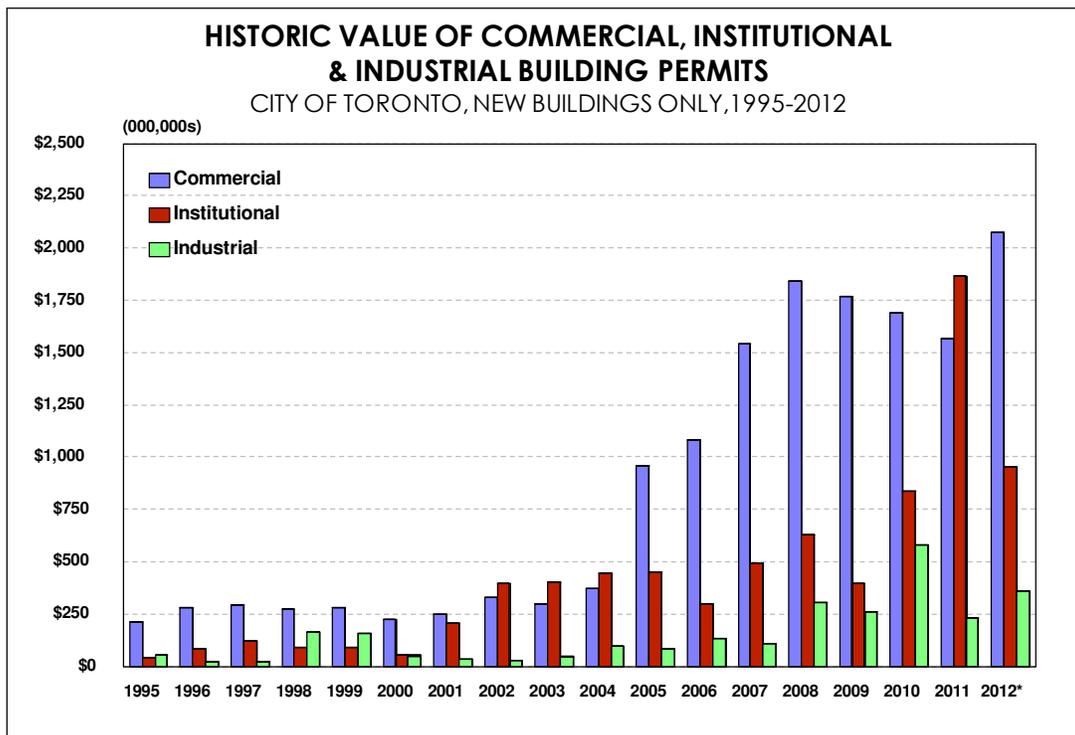

- The City of Toronto will continue to maintain a large employment base over the forecast period but the rate of growth will be slower and the nature of employment growth will shift to higher density forms, particularly offices.
- After 2011, the growth rate for major office in the GTHA slows somewhat; however, the City of Toronto will continue to retain its established position in the regional office market over the next 20 years. Major offices are forecast to be a significant contributor to the City's economic. Major office employment is about 40% of total City employment today, but is expected to account for nearly 60% of employment growth over the next decade and over 60% of employment growth in the 2020s..
- Population-related employment increases slightly over the forecast period, driven by metropolitan-wide population-related employment growth consistent with the central place function of the City as well as growth in the City's population base.

- Employment land employment will continue to decline moderately over the forecast period as re-use of the existing industrial building stock tends to result in lower employment than the historic uses and as land use change occurs in employment areas to other land uses — some to residential, but mostly to other employment categories such as office or population-related in the form of retail and institutional.

Other than office development, employment forecasts do not provide a good indicator of new non-residential construction, which is of primary interest for the development charge study. Most of the growth in non-residential space is not directly responsive to general employment growth. New non-residential space in the City is a relatively small marginal growth as an addition to the very large stock of standing space. New non-residential space is more the result of replacement and modernization of space for specific uses. This would include new retailers coming into the market, market share expansion of existing retailers and addition of new retail formats. Similarly, other new commercial, institutional and industrial space is typically the result of the specific needs of end users, rather than the provision of speculative space to accommodate general market growth.

As a result of the loose connection between general employment growth and new non-residential space, the forecast of non-residential space has been based on the continuation of historic patterns of growth. The estimated historic non-residential development is shown in the following graph.

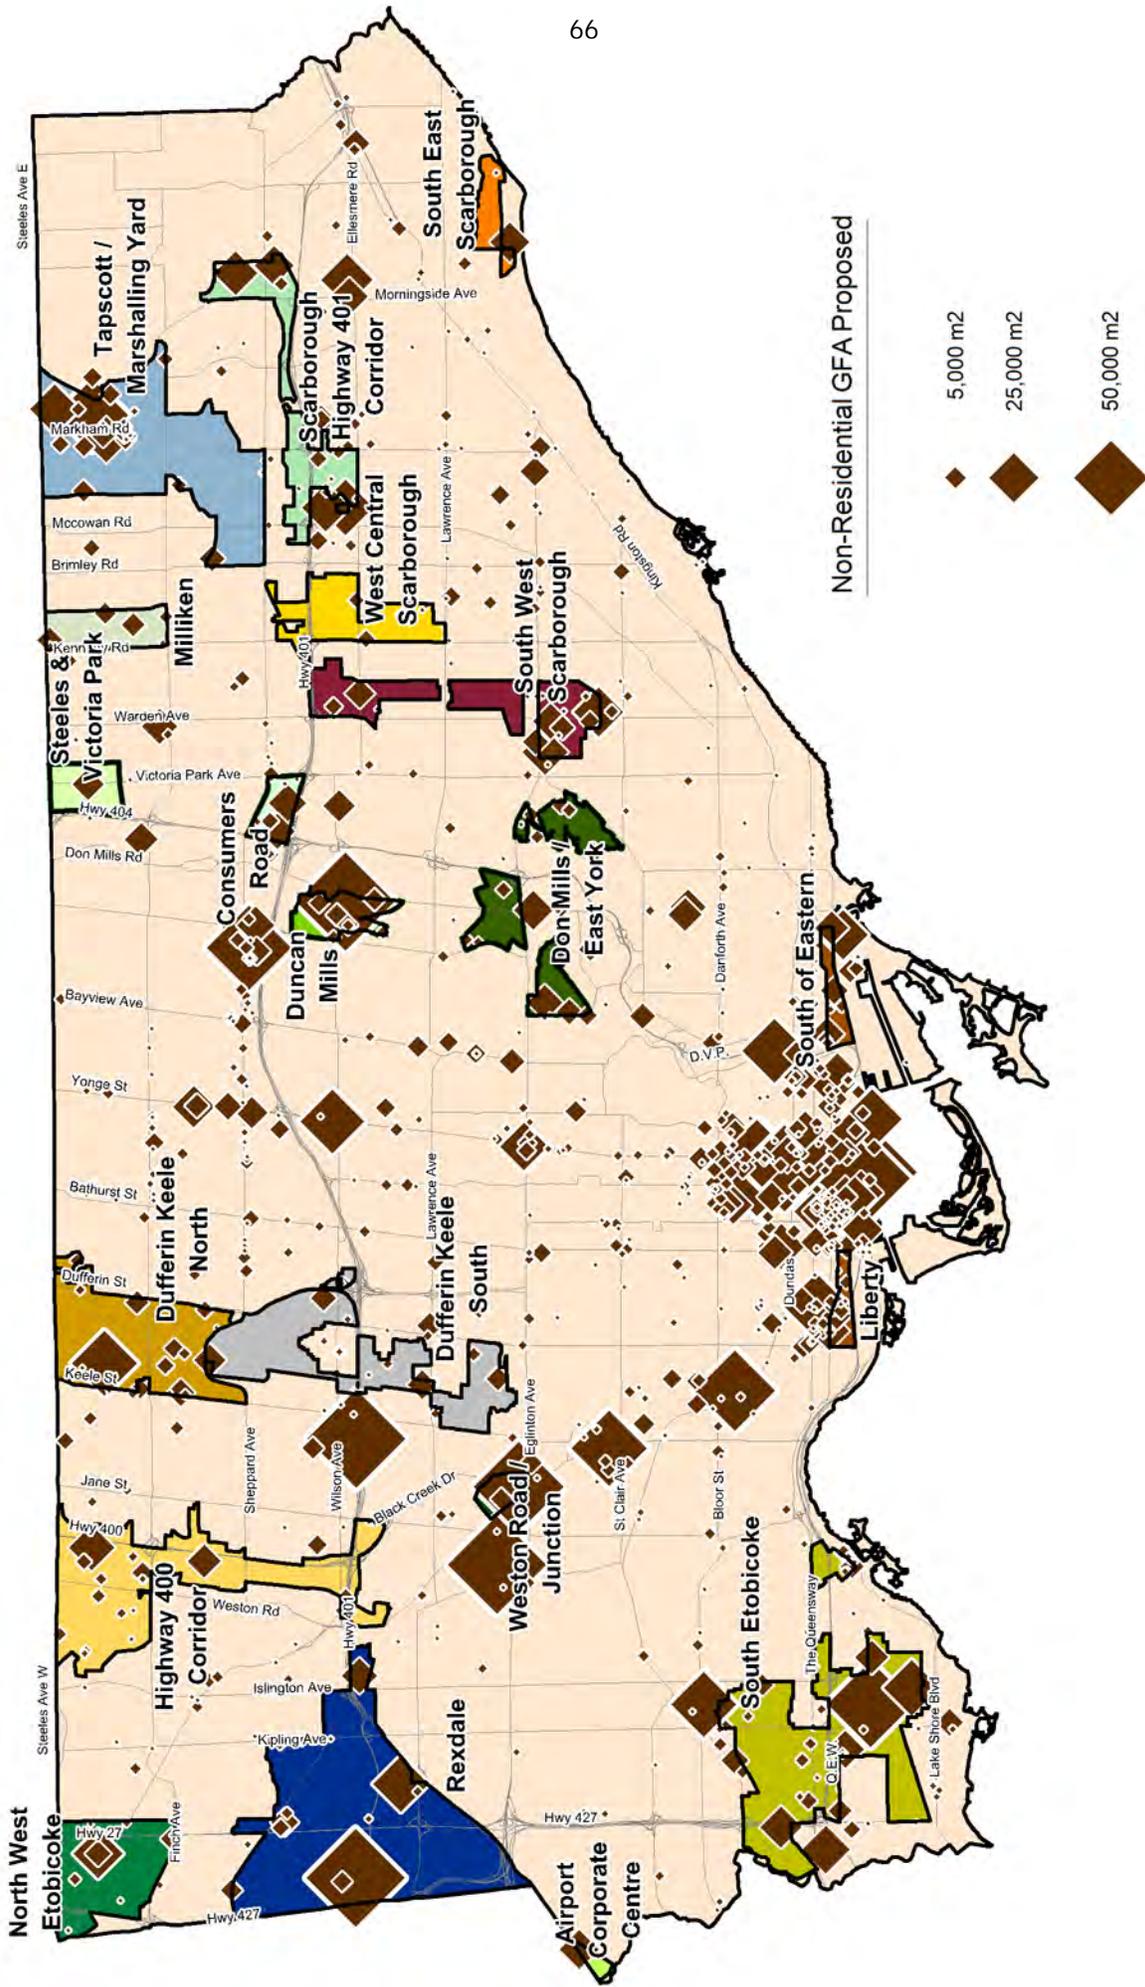

Using estimates of non-residential space growth by type over the past 10 years as a starting point, the forecast for the next 10 years has been based on an annual average going forward of about 90% of the historic 10-year annual average. The next 10 years are expected to be a little slower than the recent past because there was a clear market peak in construction of commercial space around 2008 at a level we would not expect to be repeated in the next 10 years. Similarly, the institutional space construction peaked more recently as a result of the government infrastructure spending put in place to counter the 2008–09 recession. Given the austerity measures now being put in place by the Provincial and Federal governments, this level of institutional spending is very unlikely to be repeated in the near future.

Source: Hemson Consulting Ltd., based on Statistics Canada building permits.

\*Note: 2012 is estimated.

The location within the City of new non-residential development is expected to follow the patterns of recent years with a significant concentration in the downtown area. The current applications in the development pipeline shown on the map on the following page indicate a continuation of the pattern of a downtown concentration and significant development in the employment districts. As well, there is development proposed in a number of other locations, mostly in retail concentrations in a number of scattered locations.

#### D. RESULTS OF THE CITY OF TORONTO FORECAST

The forecasts of population, housing, employment and non-residential space prepared for the City of Toronto DC study, based on the assumptions and inputs described above, are provided in the following tables. For historic data, the most recent 10 years are separated from the longer-term historic data to distinguish between the historic period used for service level calculations and the longer-term history provided only for context. Likewise, in the forecasts, a 10-year forecast is provided for 2013 through 2022 which is applied in the DC calculations. This first ten years are distinguished from the period from 2023 to 2031 which is provided for context, where 2031 is the planning horizon of the current *City of Toronto Official Plan*.

Table 1: Table 1 provides historic housing unit completions and housing unit starts by calendar year from 1996 to 2012. These data are from CMHC's *Detailed Housing Market Tables*.

Tables 1 and 2 show continuous series of housing unit completions, with the historic data in table one based on CMHC data. The definition base for the forecast completions is slightly different, being based on forecast growth in occupied units. While not identically defined, the historic and forecast data are still comparable.

Growth in housing units from mid-1996 to mid-2011 based on the CMCH completions data shown here is about 154,000 units. Growth in occupied units from Census for the same period is 144,000 (shown in Table 3). Given the difference in data sources and the precise differences in what is being counted, these are relatively close results, especially given that the rental vacancy rate was higher in 2011 than in 1996. A similar comparison from 1986 through to 2011 shows growth in CMHC counted units of 228,000 and Census counted occupied units of 231,000, again indicates long-term comparability between these sources. Shorter-term comparisons (e.g. one five-year Census period) can be more variable.

Table 2: Table 2 provides forecast housing unit completion and housing unit starts by calendar year. The completions for the first two years for apartments are based on units currently under construction. The forecast is provided according to the Census definition of occupied units and therefore is net of demolitions of existing units.

New units (which are chargeable) but vacant are not forecast. Unit vacancy occurs across the entire housing stock; the vacant units among the forecast total added is considered negligible for the purposes of calculating the DC.

The housing starts are forecast from housing completions assuming an eight-month construction period for singles, semis and rows and an average 2½ year construction period for apartments.

As noted above, the forecast shown here is based on Census occupied units, which represents a similar and broadly comparable data source to the historic data, which are annual CMHC housing unit completions. While similar and comparable for this purpose, historic CMHC housing completions within a given five-year Census period will not necessarily add to change in Census occupied units.

Table 3: Table 3 provides the historic occupied units by the Census definition of occupied units. Census data is provided for the Census years and the interim years are interpolated using the pattern of growth shown in the CMHC housing completions for the same period. The household population and the PPU are from Census data for the Census years. For the interim years, the PPU is interpolated and applied to the housing units to generate household population. The non-household population and the Census population are from Census data for the Census years. For the interim years the non-household population is interpolated by a growth rate and the Census population is the sum of the household population and the non-household population.

Because a primary basis of DC calculations is the relationship between housing and population, the analysis is limited to the Census population (which is from the same base as the household count). Census net under-coverage, estimated at 4.0% of the population in 2011 and subsequent years in the *Greater Golden Horseshoe Growth Forecasts to 2041*, is not used in these DC forecasts. However, if comparing the results of these forecasts to other sources, such as the *Growth Plan*, which does include net under-coverage, it is important to add the net under-coverage for the comparison.

Table 4: Table 4 provides the forecast occupied units by the Census definition of occupied units, which reflects the base year plus the cumulative total of the unit growth provided in Table 2. The unit growth

increment for the forecast period to 2031 is consistent with the forecast in the *Greater Golden Horseshoe Growth Forecasts to 2041*, but is adjusted slightly because there was an additional half year of starts and completions data available for the Toronto DC forecast and small adjustments are required to move from a mid-year date of the base forecasts to the calendar year forecast used for DC purposes.

The PPU is based on the *Greater Golden Horseshoe Growth Forecasts to 2041* and is applied to the units to provide a household population. The non-household population is maintained at a constant 2011 rate to the household population and the Census population represents the total of household and non-household population.

The note above concerning Census net under-coverage also applies to the forecast. The population figures do not include Census net under-coverage.

Table 5: Table 5 provides the historic PPU by unit type. The PPUs are from Census data for the Census years. For the interim years, the PPU is interpolated.

Table 6: Table 6 provides the forecast PPU by unit type. The PPU is based on the *Greater Golden Horseshoe Growth Forecasts to 2041*. As described in the 2041 forecast report, the pattern of long-term decline in the PPU has largely halted as a result of shifting household formation patterns. In particular, the 2005 forecast background work to Schedule 3 of the *Growth Plan* would have seen a decline in the City's PPU of about 6% over the 2011 to 2031 period, whereas the updated forecasts see that decline as now being a nominal 3%. And, most of that small decline only occurs because there are more apartments in the housing mix; most of which accommodate smaller households than the ground-related housing forms.

For the interim years, the PPU is interpolated.

Table 7: Table 7 provides the forecast of population in new units. The PPU for new unit singles and semis is forecast to be 3.74, compared to the existing base of 2.98. The relationship between new units and the existing base is the same as that established by the PPU data by period of construction from the 2006 Census where units built between 1996

and 2006 had a 24% higher PPU than the overall base in 2006<sup>1</sup>. The row PPU is held constant at the City-wide rate of 3.06, since, unlike singles, there is no clear pattern of how newer units vary from the existing stock. Finally, the apartment unit PPU is based on the lower PPU for new units than the existing stock, reflecting the current pattern. This pattern occurs because new construction is almost entirely condominium apartments marketed primarily to small households (either young adults or the elderly). The existing base, however, contains a significant number of rental units and public housing units, some of which accommodate larger households.

Table 8: Table 8 provides historic building permit values by the major non-residential types. The upper part of the table includes the value of all building permits, including those for interior renovations. The lower part of the table provides similar data but only for new construction either in the form of a full new building or as a building expansion. The latter is likely a small proportion of the building value.

Table 9: Table 9 provides estimated historic building space construction derived from the new build and expansion permit values. The permit values are translated into space using standard construction cost ratios by building type, adjusted for inflation.

Table 10: Table 10 provides, in the top part of the table, the recent 10-year estimated historic building space construction followed by the forecast assumption, which is based on judgement and, in each case, is slightly lower than the historic average.

The lower part of the table provides the estimated employment accommodated in the forecast new space, based on standard floor space per worker ratios.

---

<sup>1</sup> 2011 period of construction data will not be available until the results of the National Household Survey (the replacement for the old long-form Census) are released in August of 2013.

**APPENDIX B.1**  
***SPADINA SUBWAY EXTENSION***  
***APPENDIX***

## APPENDIX B.1

### SPADINA SUBWAY EXTENSION TECHNICAL APPENDIX

This appendix provides a brief outline of historic service levels for the Spadina Subway Extension, the 2013–2022 development-related capital program, the calculation of the DC and the financing costs. The cost, quantum and timing of the projects identified in the program have been provided by City staff and are based on the Council-approved capital budget, previous DC studies and other long-range planning documents.

The following discusses the individual components included in the Spadina Subway Extension category. The analysis is set out in the tables which follow. The tables include:

Table 1            2013–2022 Development-Related Capital Program and Calculation of the Discounted Growth-Related Net Capital Costs

Table 2            Financing Cost Analysis

#### A. HISTORIC SERVICE LEVELS AND CALCULATION OF 10-YEAR AVERAGE SERVICE LEVELS AND MAXIMUM ALLOWABLE CHARGES

With respect to level of service restrictions, the *Development Charges Act* was amended to state the following:

**Provision does not apply**

(2) Paragraph 4 of subsection 5 (1) does not apply in determining the estimate for the increase in the need for the Toronto–York subway extension. 2006, c. 33, Sched. H, s. 2.

The subsection that is referenced states that the increase in need for service must not be of a size which would result in the level of service exceeding the average provided in the municipality in the preceding 10-year period. As such, an historic level of service calculation was not calculated for this service.

## B. DEVELOPMENT-RELATED CAPITAL PROGRAM

The 2013–2022 development-related capital program recovers for the Toronto-York Spadina Subway Extension. The extension will extend into the City of Vaughan to the proposed Vaughan Metropolitan Centre. In total, six new stations are planned along the 8.6 kilometre route. The total cost of the project is \$2.634 billion and is allocated as follows:

| <b>Funding</b>                | <b>\$ Share in Millions</b> |
|-------------------------------|-----------------------------|
| Provincial Move Ontario Trust | \$1,134,114                 |
| Federal                       | \$622,000                   |
| Region of York                | \$351,574                   |
| City of Toronto               | \$526,483                   |
| <b>Total</b>                  | <b>\$2,634,171</b>          |

The City's share of the subway extension is therefore netted down to \$526.48 million. This share is expressed as the principle cost of the subway line. The City, however, has issued debt in the form of three sinking funds to help fund the capital costs of the extension. The City has issued debt on the past expenditures (\$287.46 million) and the financing costs related to the three sinking funds amount to \$314.70 million. The City also has future forecasted expenditures (\$239.02 million) in which it is anticipated that the City will also issue debt to help fund the upcoming costs related to the extension. The future financing costs are estimated to be roughly \$283.30 million.

In total, the principal costs related to the City's share of the Spadina Subway Extension amount to \$526.48 million while the financing component totals \$598.00 million.

## **C. CALCULATION OF DISCOUNTED DEVELOPMENT-RELATED CAPITAL COSTS**

### **1. Grants, Subsidies and Other Recoveries**

The funding models have assumed that the Federal and Provincial governments will be funding two-thirds of the Subway Extension costs. The remaining one-third portion of the costs is shared between the Region of York and the City of Toronto. The net municipal share allocation percentages were arrived at by negotiation between the two jurisdictions.

The upper-level grants subtotal to \$1.756 billion and the Region of York's share of the project is \$351.6 million. In total, \$2.108 billion in grants and other recoveries has been identified and applied to the DC capital program.

### **2. Replacement and Benefit to Existing Shares**

The main source relied upon when determining the benefit to existing share were Tables 14 and 16 from the *Travel Demand Forecasting to Support Cost-Benefit Analysis for Toronto-York Spadina Subway Extension, October 2007*. The benefit to existing share examines the change in morning peak period screenline volumes without the subway extension and with the subway extension, in the subway corridor from Sheppard to Steeles. The total transit volumes (GO Rail and Surface Transit) without the subway extension in the aforementioned corridor is 32,300, while the total number of transit trips is anticipated to increase to 43,500 after the Spadina Subway Extension is complete. The change in the total number of transit trips is 11,200. This change in the total number of transit trips, divided by the projected ridership if the Spadina Extension were not built, is roughly 35%. This is the reduction used in the DC calculations.

In total, \$430.90 million is identified as the replacement and benefit to existing share.

### **3. Legislated 10 Per Cent Reduction**

A 10% reduction need not be made to the costs for this service as per paragraph 1.2.4 in the DC legislation.

### **4. Available DC Reserve Funds**

The City had a December 31, 2012 uncommitted reserve fund balance for Spadina Subway Extension of \$17.39 million. However, this amount was notionally doubled for the principal portions of the capital program, and appropriately accounted for in the financing costs. In total, \$58.27 million has been funded by past DC revenue

collections, and an additional \$100.90 million has been deducted from the total development-related costs to account for the non-statutory exemptions and phase-in provisions of the City's current in-force DC by-law.

## **5. Post-2022 Benefit**

The post-period benefit allocation has been made to recognize that this project is in part pre-built to service future population and employment growth. The post-period benefit share is 37.8%.

In total, \$201.73 million is identified as the post-period benefit share.

## **D. CALCULATION OF RESIDENTIAL AND NON-RESIDENTIAL DISCOUNTED DEVELOPMENT-RELATED CAPITAL COSTS**

### **1. Residential and Non-Residential Allocation**

The discounted development-related costs have been allocated 66% to residential development and 34% to the non-residential sector. This sector allocation is based upon future shares of population growth in new units (241,762) and employment growth in new space (123,800).

The last page of Table 1 displays the 66% allocation to the residential sector, or \$219.69 million, and 34% to the non-residential sector, or \$112.50 million.

This page also displays the calculation of the per capita residential charge for the Spadina Subway Extension. The \$219.69 million in discounted development-related net capital costs is allocated to the 241,762 population forecast from new housing units, yielding a per capita charge of \$908.71.

The non-residential unadjusted charge per square metre is calculated by taking the \$112.50 million allocated to the non-residential sector and divided it by 5.2 million square metres of new non-residential floor space. This yields a charge of \$21.63 per square metre of GFA.

**APPENDIX B.2**  

---

***TRANSIT***  
***APPENDIX***

## APPENDIX B.2

### TRANSIT TECHNICAL APPENDIX

The Toronto Transit Commission (TTC) is responsible for the provision of transit buses, streetcars and rapid transit services throughout the City.

This appendix provides a brief outline of historic service levels for transit, the 2013–2022 development-related capital program, the calculation of the "unadjusted" DC, and the calculated charge after cash flow considerations. The cost, quantum and timing of the projects identified in the program have been provided by City staff and are based on the Council-approved capital budget, previous DC studies and other long-range planning documents. The portion of the development-related capital program included in the calculation of the DC is the lesser of that identified in the capital program and that which would be generated by the application of the average level of service provided over the past 10 years. Consistent with s. 5 (1) 7 of the DCA, the eligible development-related net capital cost for the provision of transit is reduced by 10% in calculating DCs.

The following discusses the individual components included in the transit category. The analysis is set out in the tables which follow. The tables include:

|         |  |
|---------|--|
| Table 1 | Historic Service Levels and Calculation of 10-Year Average Service Level   |
| Table 2 | 2013–2022 Development-Related Capital Program and Calculation of the Discounted Growth-Related Net Capital Costs |
| Table 3 | Cash Flow Analysis   |

#### **A. HISTORIC SERVICE LEVELS AND CALCULATION OF 10-YEAR AVERAGE SERVICE LEVELS AND MAXIMUM ALLOWABLE CHARGES**

Transit services are currently provided through 154.2 km of running structures for transit lines, 77 transit stations, numerous types of vehicles, and also include the

transit yards, garages and other ancillary buildings for a total inventory value of \$32.7 billion in 2012.

In general, the asset replacement values for transit lines and stations are based upon recent engineering data. The replacement value for the remaining asset types, vehicles, buildings and structures and contents are based upon a property appraisal undertaken for insurance purposes and completed in 2012.

For the purposes of the DC study, the TTC's running structures have been grouped into three categories, each of which contains sub-categories. The sub-categories are itemized so that the representative replacement cost is appropriately applied to each type of transit line. In total, there is 154.2 km of double track transit lines, for a total value of \$10.73 billion.

The categorization of the transit stations is also grouped for the purposes of valuation in the DC study. In total, there are 77 transit stations that have a value of \$13.29 billion.

The balance of the transit assets is taken directly from the property appraisal insurance report. The rail yards total \$2.46 billion, vehicles amount to \$4.55 billion, the buildings and structures are \$1.12 billion, and finally the contents total \$601.6 million.

The last page of Table 1 provides a summary of the level of service and the calculation of the 10-year historic service level. Also shown on this page is the calculation of the maximum allowable funding envelope, which is summarized as follows:

| <b>10-Year Funding Envelope Calculation</b>          |                        |
|--|------------------------|
| 10-Year Average Service Level (2003 – 2012)          | \$7,901.67             |
| Net Population and Employment Growth (2013 – 2022)   | 336,284                |
| Maximum Allowable Funding Envelope                   | \$2,657,205,194        |
| Less: 10% Legislated Reduction                       | \$265,720,519          |
| <b>Discounted Maximum Allowable Funding Envelope</b> | <b>\$2,391,484,675</b> |

The existing facilities have been examined and consideration has been made with regard to whether or not “excess capacity” exists within the City’s infrastructure that may be available to partially meet the future servicing requirements. It has been determined that no “uncommitted excess capacity” exists within the City’s transit infrastructure, and as such, no adjustments have been made to the service level calculations.

## **B. DEVELOPMENT-RELATED CAPITAL PROGRAM**

The 2013–2022 development-related capital program includes a wide variety of projects for the provision of transit services in the City and amounts to a total gross cost of \$2.06 billion. The City has reviewed its 10-year capital budget to identify which projects will result, in whole or in part, in increased capacity to meet the servicing needs of new development.

The first category in the transit capital program is for the recovery of additional vehicles to the fleet that relate to increased ridership. It is noted that only vehicles related to increased ridership are included in the capital program and others have been omitted (i.e. additional vehicles due to congestion). It is also noted that the costs related to what the TTC refers to a “spares ratio” and also an allowance to account for storage facilities are included in the unit cost of the vehicle. As such, two yards were removed from the capital program. In total, additional buses, streetcars and subways for increased ridership amount to \$621.78 million.

The TTC is also undertaking a re-signalling project for automatic train control for both of the subway lines. Only the growth share of this project has been included in the gross project cost. The growth share amounts to \$280.53 million.

The Sheppard Subway cost recovery is a carry-forward project from the previous DC study. This line was opened in 2002 and the City continues to recover the growth-related share which is considered to be “committed excess capacity”. The City had previously indicated that the development-related portion was to be funded through future DCs as part of including it in past DC studies. As of 2013, there is currently still \$215.40 million yet to be funded.

Also included in the transit capital program are parks, open space and other recreation projects undertaken in the Waterfront Toronto and Port Lands areas of the City. Projects include additions and improvements to existing facilities and public spaces, and also two new community centres.

The Union Station Revitalization project is currently underway with a targeted completion date of 2016. When completed, the quality and capacity of pedestrian movement in and around the station will be improved substantially. The revitalization is staged in three phases and the subcomponents of the project are priced accordingly. Only the subcomponents of the phases with a development-related share are included in the DC study. In total, these subcomponents of the revitalization amount to \$400.10 million.

The transit capital program also includes three projects in the Waterfront Toronto area; an extension of the Cherry Street Transit Line, a Queen's Way (East Bayfront) LRT Extension, and finally the second platform at Union Station. All three projects are carried forward from the previous DC study and amount to \$491.23 million. Note that the \$3.0 million gross project cost referenced in the DC capital program represents only the anticipated Waterfront Toronto contribution to the environmental assessment, design and construction of the Cherry Street "spur" from the existing King East streetcar line, southward to a loop just north of the railway grade separation. The \$138.3 million gross project cost represents the agreed cap on Waterfront Toronto's contribution to the design and construction of the Union Station second platform and ancillary works.

The final section in the transit capital program represents works to be completed in the Port Lands area of the City. The cost for the Cherry Street Transit over Keating Channel is based on Attachment II to Appendix 8 – the Port Lands Development Heavy Civil Constructability Review prepared by Aecon Construction and Materials. The temporary works to accommodate interim BRT is an allowance for the temporary works required to convert the portions of the the Cherry Street ROW, portions of the Queens Quay/Lakeshore Boulevard ROW (between Cherry Street and the Don Roadway) and the Don Roadway/Commissioners Street (from Lakeshore Boulevard to approximately Carlaw Avenue) designated for LRT transit to a dedicated bus way (barriers, platforms, signage, etc.). Finally, the PLAI conceived of a new LRT transit line extending eastward along Queens

Quay/Lakeshore Boulevard to the Don Roadway and down into the Film Studio precinct. The addition of dedicated transit lanes to Lakeshore Boulevard would drive the need for a transit bridge (two lanes) across the Don River. The total costs of the Port Lands transit works amount to \$55.21 million.

## **C. CALCULATION OF DISCOUNTED DEVELOPMENT-RELATED CAPITAL COSTS**

### **1. Grants, Subsidies and Other Recoveries**

The reductions to City Transit programming projects under section 2.1, 2.2, 2.3 and 2.5 all come from upper-tier grants; both from the Provincial and Federal governments.

In total, \$592.97 million in grants is identified and applied to the DC capital program.

### **2. Replacement and Benefit to Existing Shares**

The replacement and benefit to existing shares have been examined on a project-by-project basis and the nature of each project determined the rationale for the reductions. For projects that were identified in the previous DC study, the prior benefit to exiting shares have been maintained in this Study.

For the Union Station Revitalization project, shares have been deducted from the net cost of projects that account for portions of the project that relate to state of good repair or the replacement or reconstruction of existing facilities. Those projects that are completely new are deemed to be entirely growth-related and no replacement shares have been deducted from the net cost.

In total, \$265.70 million is identified as the replacement and benefit to existing share.

### **3. Legislated 10% Reduction**

As this service is not identified in Section 5(5) of the *DCA*, a 10% reduction to the net municipal costs, less the replacement/benefit to existing shares, is made to each project.

In total, \$120.56 million is identified as the 10% reduction share.

#### **4. Post-2022 Benefit**

While the total development-related costs of the transit capital program — \$1.085 billion — is within the net funding envelope of \$2.598 billion, post-period benefit shares related to the Union Station Revitalization project and Waterfront Toronto and Port Lands area projects have been made. The post-period benefit allocations have been made to recognize that these projects are in part pre-built to service future population and employment growth. The post-period benefit shares were calculated based on the future shares of population and employment growth from 2022 to 2041, which is roughly a 60% allocation.

In total, \$188.67 million is identified as the post-period benefit share.

### **D. CALCULATION OF RESIDENTIAL AND NON-RESIDENTIAL DISCOUNTED DEVELOPMENT-RELATED CAPITAL COSTS**

#### **1. Residential and Non-Residential Allocation**

The discounted development-related costs have been allocated 66% to residential development and 34% to non-residential. This allocation is based on future shares of population growth in new units (241,762) and employment growth in new space (123,800).

The last page of Table 2 displays the 66% allocation to the residential sector, or \$592.80 million, and 34% to the non-residential sector, or \$303.56 million.

This page also displays the calculation of the unadjusted per capita residential charge for transit. The \$592.80 million in discounted development-related net capital costs is allocated to the 241,762 population forecast from new housing units, yielding a per capita charge of \$2,452.00 before cash flow adjustments.

The non-residential unadjusted charge per square metre is calculated by taking the \$303.56 million allocated to the non-residential sector and dividing it by 5.2 million square metres of new non-residential floor space. This yields an unadjusted charge of \$58.38 per square metre of GFA.

### **E. CASH FLOW ANALYSIS**

A cash flow analysis is also undertaken to account for the timing of projects and receipt of DCs. Interest earnings or borrowing costs are, therefore, accounted for in the calculation as allowed under the *DCA*. Based on the development forecast, the

analysis calculates the DC rate that is required to finance the discounted development-related capital spending plan including provisions for any borrowing costs or interest earnings on the reserve funds. The cash flow analysis is designed so that the closing cash balance at the end of the planning period is as close to nil as possible.

In order to determine appropriate DC rates reflecting borrowing and earnings necessary to support the discounted development-related funding requirement, assumptions are used for the inflation rate and interest rate. An inflation rate of 2.0% is used for the funding requirements, an interest rate of 3.5% is used for positive opening balances, and a rate of 5.5% is used for negative opening balances.

Page 1 of Table 3 displays the results of the cash flow analysis and provides the adjusted or final per capita residential and per square metre (of GFA) non-residential DCs. After cash flow consideration, the residential calculated charge decreases slightly to \$2,443.44 per capita. The non-residential charge after cash flow increases slightly to \$59.04 per square metre of GFA.

The following table summarizes the calculation of the transit services DC.

| <b>TRANSIT (BALANCE) SUMMARY</b> |                                     |                    |                    |         |                    |                |

**APPENDIX B.3**  
***ROADS AND RELATED APPENDIX***

### APPENDIX B.3

#### ROADS AND RELATED SERVICES TECHNICAL APPENDIX

The Transportation Services Department is responsible for the emplacement and operation of Road and Related infrastructure in the City. For roads-related infrastructure located in the waterfront area of the City (East Bayfront, West Don Lands, Lower Don Lands, Central Waterfront and Port Lands), Waterfront Toronto is the lead agency undertaking roads related works. Consistent with the City's current DC by-law, waterfront and non-waterfront roads projects are to be funded through the same reserve fund.

Capital infrastructure contained in the roads and related service category includes roads, bridges and other grade separations, traffic and pedestrian signals and transportation studies. Other capital assets within the road right-of-way such as street trees, plantings, benches, signs, etc. are also considered to be roads-related infrastructure. Additionally, the *DCA* permits a municipality to use DCs for the acquisition of land for DC-eligible services such as roads.

This appendix provides a brief outline of historic service levels for roads and related services, the 2013–2022 development-related capital program, the calculation of the “unadjusted” DC, and the calculated charge after cash flow considerations. The cost, quantum and timing of the projects identified in the program have been provided by Transportation Services and Waterfront Toronto staff and are based on the 2013 approved capital budget, previous DC background studies, and other long-range planning documents. The portion of the development-related capital program included in the calculation of the DC is the lesser of that identified in the capital program and that which would be generated by the application of the average level of service provided over the past 10 years. Consistent with s. 5 (1) 7 of the *DCA*, there is no mandated 10% reduction to the DC for roads and related services.

The following discusses the individual components included in the roads and related service category. The analysis is set out in the tables which follow. The tables include:

|         |  |
|---------|--|
| Table 1 | Historic Service Levels and Calculation of 10-Year Average Service Level   |
| Table 2 | 2013–2022 Development-Related Capital Program and Calculation of the Discounted Growth-Related Net Capital Costs |
| Table 3 | Cash Flow Analysis   |

**A. HISTORIC SERVICE LEVELS AND CALCULATION OF 10-YEAR AVERAGE SERVICE LEVELS AND MAXIMUM ALLOWABLE CHARGES**

The City has an extensive road network that has grown modestly over the last 10 years. As shown in Table 1, the DC inventory for roads is based on a system lane kilometre approach. The City’s current network of expressways, arterial and collector roads totals 7,128 lane km with total replacement value of \$9.4 billion. Although eligible, land is not included in this estimate. Since quantitative data was not yet available for 2012, 2011 values were carried forward.

The average service level experienced over the last 10 years is \$2,177.87 per capita and employment. This, multiplied by the 10-year growth of net population and employment of 241,600, produces a maximum available funding envelope of \$732.4 million.

| <b>10-Year Funding Envelope Calculation</b>          |                      |
|--|----------------------|
| 10-Year Average Service Level (2003 – 2012)          | \$2,177.87           |
| Net Population and Employment Growth (2013 – 2022)   | 336,284              |
| Maximum Allowable Funding Envelope                   | \$732,382,835        |
| Less: 10% Legislated Reduction                       | \$0                  |
| <b>Discounted Maximum Allowable Funding Envelope</b> | <b>\$732,382,835</b> |

The existing facilities have been examined and consideration has been given to whether or not “excess capacity” exists within the City’s infrastructure that may be available to partially meet the future servicing requirements. It has been determined that no “uncommitted excess capacity” exists within the roads and related network, and as such, no adjustments have been made to the service level calculations.

## **B. DEVELOPMENT-RELATED CAPITAL PROGRAM**

The 2013–2022 development-related capital program includes a wide variety of projects for the provision of roads-related services in the City and amounts to a total gross cost of \$1.2 billion, as shown in Table 2.

Of the \$1.2 billion in roads and related infrastructure, \$432.0 million relates to Port Lands-related projects. An additional \$270.9 million relates to the provision of roads-related infrastructure in other Waterfront Toronto areas. It should be noted that ancillary water and sewer costs are included in Waterfront Toronto projects since the projects are estimated and tendered on an aggregate basis. A double count does not exist as these projects have not been included in the water and sanitary sewer DC capital programs.

Non-Waterfront road infrastructure totals \$366.6 million and includes many projects that were also identified in the City's last DC study. Other capital projects include signalization projects (\$104.6 million) and transit priority projects on surface routes (\$19.7 million).

Four projects that were identified in the City's last DC study have been partially funded and carried forward into this study. The following approach was used to determine the amounts to be carried forward:

- The City's DC reserve fund statements for the 2009–2012 period were reviewed to identify projects in the 2009 DC study that were undertaken.
- The DC-eligible share identified in the 2009 DC study was applied to the actual project funding.
- It was assumed that the combined benefit to existing/post-period amounts identified in the last DC study were 90% related to benefit to exiting and 10% related to DC-eligible post-period shares.
- The DC funding to date was grossed upwards by 50% to account for the City's non-statutory discounts and phase-in schedule.
- The remaining DC-eligible share is carried forward to this DC study capital program in the gross project cost column. The residual amount totals \$17.3 million.

- The residual DC-eligible share is then split between in-period and post-period growth based on the latest population and employment projections to 2022 (62%) and 2031 (38%) respectively.

The capital program includes developer credits carried forward into this DC calculation, as per Section 8 (5) of *O.Reg. 82/98*. The City is proposing to include three developer credits for recovery through the DC that total \$3.9 million.

## **C. CALCULATION OF DISCOUNTED DEVELOPMENT-RELATED CAPITAL COSTS**

### **1. Grants, Subsidies and Other Recoveries**

Provincial and Federal funding exists for certain Waterfront Toronto projects and these amounts totalling \$52.4 million have been netted off the gross project cost. The grant amounts are from the Waterfront Toronto funding model. Although the agency's funding was established on a 1/3–1/3–1/3 basis, due to timing restrictions and government priorities the actual grant shares vary from project to project.

### **2. Replacement and Benefit to Existing Shares**

The replacement and benefit to existing shares have been examined on a project-by-project basis and the nature of each project determined the rationale for the reductions. Generally speaking, shares have been deducted from the net cost of projects that account for portions of the project that relate to state-of-good-repair or the replacement or reconstruction of existing facilities. Those projects that are completely new are deemed to be entirely growth-related and no replacement shares have been deducted from the net cost. For projects that were identified in the 2009 DC study, the prior benefit-to-existing shares have been maintained in this study.

In total, \$236.0 million is identified as the replacement and benefit to existing share.

### **3. Legislated 10% Reduction**

As this service is identified in Section 5 (5) of the *DCA*, a 10% reduction to the net municipal costs is not required.

### **4. Available DC Reserve Funds**

The City had a December 31, 2012 reserve fund balance for roads and related services of \$47.4 million. However, this amount was notionally doubled to \$94.9 million to account for the non-statutory exemptions and phase-in provisions of the

City's current in-force DC by-law. The \$94.9 million was deducted from the DC-eligible capital program.

## **5. Post-2022 Benefit**

Approximately \$364.8 million in post-period DC shares has been identified. Approximately 90% of this amount relates to Port Lands works. The development-related component of these projects has been split based on City-wide population and employment growth in the 2013–2022 period versus growth in the 2023–2041 period.

After the deductions described above, \$466.9 million is determined to be DC-eligible in the 10-year period and carried forward to the rate calculation.

## **D. CALCULATION OF RESIDENTIAL AND NON-RESIDENTIAL DISCOUNTED DEVELOPMENT-RELATED CAPITAL COSTS**

The discounted development-related costs have been allocated 66.1% to residential development and 33.9% to non-residential development. These percentages are based on shares of 10-year population growth in new units and gross employment growth.

The \$308.8 million in residential development-related net capital costs is divided by the population forecast from new housing units of 241,762, yielding a per capita charge of \$1,277.29 before cash flow adjustments.

The non-residential unadjusted charge per square metre is calculated by taking the \$158.1 million allocated to the non-residential sector and dividing it by 5.2 million square metres of new non-residential floor space. This yields an unadjusted charge of \$30.41 per square metre of GFA.

## **E. CASH FLOW ANALYSIS**

A cash flow analysis is also undertaken to account for the timing of projects and receipt of DCs. Interest earnings or borrowing costs are, therefore, accounted for in the calculation as allowed under the *DCA*. Based on the development forecast, the analysis calculates the DC rate required to finance the discounted development-related capital spending plan including provisions for any borrowing costs or interest

earnings on the reserve funds. The cash flow analysis is designed so that the closing cash balance at the end of the planning period is as close to nil as possible.

In order to determine appropriate DC rates reflecting borrowing and earnings necessary to support the discounted development-related funding requirement, assumptions are used for the inflation rate and interest rate. An inflation rate of 2.0% is used for the funding requirements, an interest rate of 3.5% is used for positive opening balances, and a rate of 5.5% is used for negative opening balances.

Table 3 displays the results of the cash flow analysis and provides the adjusted or final per capita residential and per square metre (of GFA) non-residential DCs. After cash flow consideration, the residential calculated charge decreases slightly to \$1,267.88 per capita. The non-residential charge after cash flow increases slightly to \$30.48 per square metre of GFA.

The following table summarizes the calculation of the roads and related DC.

**APPENDIX B.4**  
***WATER TECHNICAL APPENDIX***

## APPENDIX B.4

### WATER SERVICES TECHNICAL APPENDIX

Toronto Water is responsible for the emplacement and operation of the City's water mains and water treatment facilities. Toronto Water is also responsible for the City's sanitary sewer and storm water facilities which are discussed in Appendices B.5 and B.6 respectively.

This appendix provides an outline of the 2013–2022 development-related capital program for water, the calculation of the “unadjusted” DC, and the calculated charge after cash flow considerations. The cost, quantum and timing of the projects identified in the program have been provided by Toronto Water and Waterfront Toronto staff and are based on the 2013 approved capital budget, previous DC background studies, and other long-range planning documents.

A historic service level analysis is not required for water service since Provincial, Toronto Water and Toronto Fire standards determine the increased need for service for water infrastructure based on the anticipated development.

The following discusses the individual components included in the water service category. The analysis is set out in the tables which follow. The tables include:

Table 1            2013–2022 Development-Related Capital Program and Calculation of the Discounted Growth-Related Net Capital Costs

Table 2            Cash Flow Analysis

#### **A. DEVELOPMENT-RELATED CAPITAL PROGRAM**

The 2013–2022 development-related capital program includes a wide variety of projects for the provision of water service in the City and amounts to a total gross cost of \$1.6 billion, as shown in Table 1.

Of the \$1.6 billion in development-related water infrastructure, \$1.1 billion relates to linear projects including the construction of new mains and upsizing of existing

mains. The second largest component of the capital program relates to \$238.1 million in works for the City's four water supply and treatment plants and efficiency programs. As a significant number of plant upgrades have been undertaken over the last five years, the plant component of the capital program is not as extensive as prior DC studies.

Approximately \$173.1 million of the capital program relates to projects that were identified in the City's last DC study. These projects have been partially funded and carried forward into this study. The following approach was used to determine the amounts to be carried forward:

- The City's DC reserve fund and accounting statements for the 2009–2012 period were reviewed to identify projects in the 2009 DC study that were undertaken.
- The DC-eligible share identified in the 2009 DC study was applied to the actual project funding.
- The DC funding to date was grossed upwards by 50% to account for the City's non-statutory discounts and phase-in schedule.
- The remaining DC-eligible share is carried forward to this DC study capital program in the gross project cost column. The residual amount totals \$173.1 million.
- The residual DC-eligible share is then split between in-period and post-period growth based on the latest population and employment projections to 2022 (62%) and 2031 (38%) respectively.

Approximately \$64.6 million in other works has been identified in the capital program. This includes unallocated development-related works that the City has not yet identified and several studies.

A small amount of water-related works has been identified in the Port Lands area. About \$4.1 million is deemed to be development-related.

## **B. CALCULATION OF DISCOUNTED DEVELOPMENT-RELATED CAPITAL COSTS**

### **1. Grants, Subsidies and Other Recoveries**

The Regional Municipality of York provides funding for development-related projects that provide capacity for future growth in York Region. The funding applies to the F.J. Horgan Water Treatment Plant and several transmission mains. In total, \$207.3 million has been netted off the capital program to account for York Region contributions. It is noted that York Region shares have already been netted off the gross costs in the “Prior Projects” category.

### **2. Replacement and Benefit to Existing Shares**

The replacement and benefit to existing shares have been examined on a project-by-project basis and the nature of each project determined the rationale for the reductions. Generally speaking, shares have been deducted from the net cost of projects that account for portions of the project that relate to state-of-good-repair or the replacement or reconstruction of existing facilities. Those projects that are completely new are deemed to be entirely growth-related and no replacement shares have been deducted from the net cost.

If an existing pipe is in a good condition and needs to be upsized solely because of development in the area, no benefit to existing share is applied. For other linear infrastructure that is being upsized, the development-related shares are based on the increase in capacity of moving from one diameter of pipe to another. For example, if an existing 200mm pipe is upsized to a 300mm pipe to accommodate future growth, 65.6% of the project is deemed to be development-related based on the added capacity.

For plant works, the benefit-to-existing amounts are based on current and future shares of population and employment.

In total, \$734.1 million is identified as the replacement and benefit to existing share.

### **3. Legislated 10% Reduction**

As this service is identified in Section 5 (5) of the *DCA*, a 10% reduction to the net municipal costs is not required.

### **4. Available DC Reserve Funds**

The City had a December 31, 2012 reserve fund balance for water of \$31.9 million. However, this amount was notionally doubled to \$63.9 million to account for the

non-statutory exemptions and phase-in provisions of the City's current DC by-law. The \$63.9 million is deducted from the DC-eligible capital program.

#### **5. Post-2022 Benefit**

Approximately \$217.4 million in post-period DC shares is identified. Post-period shares are applied to plant, transmission main, and Port Lands works. The development-related component of these projects are split based on population and employment growth in the 2013–2022 period versus growth in the 2023–2031 period for non-Port Lands projects and growth in the 2023–2041 period for the Port Lands.

After the deductions described above, \$397.3 million is determined to be DC-eligible in the 10-year period and carried forward to the rate calculation.

### **C. CALCULATION OF RESIDENTIAL AND NON-RESIDENTIAL DISCOUNTED DEVELOPMENT-RELATED CAPITAL COSTS**

The discounted development-related costs have been allocated 66.1% to residential development and 33.9% to non-residential development. These percentages are based on shares of 10-year population growth in new units and gross employment growth.

The \$262.8 million in residential development-related net capital costs is divided by the population forecast from new housing units of 241,762, yielding a per capita charge of \$1,086.87 before cash flow adjustments.

The non-residential unadjusted charge per square metre is calculated by taking the \$134.6 million allocated to the non-residential sector and dividing it by 5.2 million square metres of new non-residential floor space. This yields an unadjusted charge of \$25.88 per square metre of GFA.

### **D. CASH FLOW ANALYSIS**

A cash flow analysis is also undertaken to account for the timing of projects and receipt of DCs. Interest earnings or borrowing costs are, therefore, accounted for in the calculation as allowed under the *DCA*. Based on the development forecast, the analysis calculates the DC rate that is required to finance the discounted development-related capital spending plan including provisions for any borrowing

costs or interest earnings on the reserve funds. The cash flow analysis is designed so that the closing cash balance at the end of the planning period is as close to nil as possible.

In order to determine appropriate DC rates reflecting borrowing and earnings necessary to support the discounted development-related funding requirement, assumptions are used for the inflation rate and interest rate. An inflation rate of 2.0% is used for the funding requirements, an interest rate of 3.5% is used for positive opening balances, and a rate of 5.5% is used for negative opening balances.

Table 2 displays the results of the cash flow analysis and provides the adjusted or final per capita residential and per square metre (of GFA) non-residential DCs. After cash flow consideration, the residential calculated charge decreases slightly to \$1,077.63 per capita. The non-residential charge after cash flowing remains unchanged at \$25.87 per square metre of GFA.

The following table summarizes the calculation of the water DC.

| <b>WATER</b>                                 |                    |                                 |         |                                 |                |

**APPENDIX B.5**  
***SANITARY SEWER (WASTEWATER)***  
***TECHNICAL APPENDIX***

## APPENDIX B.5

### SANITARY SEWER (WASTEWATER) SERVICES TECHNICAL APPENDIX

Toronto Water is responsible for the emplacement and operation of the City's Wastewater plant and linear network. Toronto Water is also responsible for the City's water and storm water facilities which are discussed in Appendices B.4 and B.6 respectively.

This appendix provides an outline of the 2013–2022 development-related capital program for sanitary sewer, the calculation of the “unadjusted” DC and the calculated charge after cash flow considerations. The cost, quantum and timing of the projects identified in the program have been provided by Toronto Water and Waterfront Toronto staff and are based on the 2013 approved capital budget, previous DC studies, and other long-range planning documents.

A historic service level analysis is not required for wastewater services since Provincial and City environmental standards determine the increased need for service for sewer infrastructure based on the anticipated development.

The following discusses the individual components included in the sanitary sewer service category. The analysis is set out in the tables which follow. The tables include:

Table 1      2013–2022 Development-Related Capital Program and Calculation of the Discounted Growth-Related Net Capital Costs

Table 2      Cash Flow Analysis

#### **A. DEVELOPMENT-RELATED CAPITAL PROGRAM**

The 2013–2022 development-related capital program includes a wide variety of projects for the provision of sanitary sewer services in the City and amounts to a total gross cost of \$2.5 billion, as shown in Table 1.

Of the \$2.5 billion in development-related infrastructure, \$1.4 billion relates to plants. This includes improvements to the Ashbridges, Highland Creek and Humber facilities.

The second largest component of the capital program relates to \$917.8 million in mains and pumping stations.

Approximately \$35.1 million of the capital program relates to projects that were identified in the City's last DC study. These projects have been partially funded and carried forward into this study. The following approach was used to determine the amounts to be carried forward:

- The City's DC reserve fund and accounting statements for the 2009–2012 period were reviewed to identify projects in the 2009 DC study that were undertaken.
- The DC-eligible share identified in the 2009 study was applied to the actual project funding.
- The DC funding to date was grossed upwards by 50% to account for the City's non-statutory discounts and phase-in schedule.
- The remaining DC-eligible share is carried forward to this DC study capital program in the gross project cost column. The residual amount totals \$35.1 million.

Approximately \$38.0 million in Waterfront Toronto works is identified. Of that amount, \$24.0 million is in the Easy Bayfront area and \$14.0 million is in the Port Lands.

Additionally, \$75.5 million in other works is identified in the capital program. This includes unallocated development-related works that the City has not yet identified as well as several studies.

## **B. CALCULATION OF DISCOUNTED DEVELOPMENT-RELATED CAPITAL COSTS**

### **1. Grants, Subsidies and Other Recoveries**

Approximately \$20.7 million in senior government grants is anticipated for East Bayfront Sanitary Sewer Works. This amount is netted off the DC calculation.

### **2. Replacement and Benefit to Existing Shares**

The replacement and benefit to existing shares have been examined on a project-by-project basis and the nature of each project determined the rationale for the reductions. Generally speaking, shares have been deducted from the net cost of projects that account for portions of the project that relate to state-of-good-repair or the replacement or reconstruction of existing facilities. Those projects that are completely new are deemed to be entirely growth-related and no replacement shares have been deducted from the net cost.

The inventory information for sanitary sewer pipes is not as detailed as the data available for water pipes. As such, a capacity-based approach to calculating benefit to existing shares for sewer mains was not used. Instead, shares of current and forecast population and employment were used to calculate the benefit to existing shares for most projects where they apply.

In total, \$2.0 billion is identified as the replacement and benefit to existing share.

### **3. Legislated 10% Reduction**

As this service is identified in Section 5 (5) of the *DCA*, a 10% reduction to the net municipal costs is not required.

### **4. Available DC Reserve Funds**

The City had a December 31, 2012 reserve fund balance for sanitary sewer services of \$50.0 million. Funding for 2013 Waterfront Sanitary Servicing Infrastructure (\$11.6 million) is deducted resulting in an available reserve fund balance of \$38.4 million. This amount is notionally doubled to \$76.8 million to account for the non-statutory exemptions and phase-in provisions of the City's current in-force DC by-law. The \$76.8 million is deducted from the DC-eligible capital program.

### **5. Post-2022 Benefit**

Approximately \$145.1 million in post-period DC shares is identified. Consistent with the City's current practice, post-period shares are applied to plant, liner and Port Lands works. The development-related component of these projects is split

based on population and employment growth in the 2013–2022 period versus growth in the 2023–2031 period for non-Port Lands projects and growth in the 2023–2041 period for the Port Lands.

After the deductions described above, \$286.3 million is determined to be DC-eligible in the 10-year period and carried forward to the rate calculation.

### **C. CALCULATION OF RESIDENTIAL AND NON-RESIDENTIAL DISCOUNTED DEVELOPMENT-RELATED CAPITAL COSTS**

The discounted development-related costs have been allocated 66.1% to residential development and 33.9% to non-residential development. These percentages are based on shares of 10-year population growth in new units and gross employment growth.

The \$189.3 million in residential development-related net capital costs is divided by the population forecast from new housing units of 241,762, yielding a per capita charge of \$783.20 before cash flow adjustments.

The non-residential unadjusted charge per square metre is calculated by taking the \$97.0 million allocated to the non-residential sector and dividing it by 5.2 million square metres of new non-residential floor space. This yields an unadjusted charge of \$18.65 per square metre of GFA.

### **D. CASH FLOW ANALYSIS**

A cash flow analysis is also undertaken to account for the timing of projects and receipt of DCs. Interest earnings or borrowing costs are, therefore, accounted for in the calculation as allowed under the *DCA*. Based on the development forecast, the analysis calculates the DC rate that is required to finance the discounted development-related capital spending plan including provisions for any borrowing costs or interest earnings on the reserve funds. The cash flow analysis is designed so that the closing cash balance at the end of the planning period is as close to nil as possible.

In order to determine appropriate DC rates reflecting borrowings and earnings necessary to support the discounted development-related funding requirement,

assumptions are used for the inflation rate and interest rate. An inflation rate of 2.0% is used for the funding requirements, an interest rate of 3.5% is used for positive opening balances, and a rate of 5.5% is used for negative opening balances.

Table 2 displays the results of the cash flow analysis and provides the adjusted or final per capita residential and per square metre (of GFA) non-residential DCs. After cash flow consideration, the residential calculated charge decreases slightly to \$775.69 per capita. The non-residential charge after cash flow decreases slightly to \$18.63 per square metre of GFA.

The following table summarizes the calculation of the sanitary sewer DC.

**APPENDIX B.6**  
***STORM WATER***  
***TECHNICAL APPENDIX***

## APPENDIX B.6

### STORM WATER MANAGEMENT TECHNICAL APPENDIX

Toronto Water is responsible for the emplacement and operation of the City's storm drainage infrastructure. Toronto Water is also responsible for the City's water and sanitary sewer facilities which are discussed in Appendices B.4 and B.5 respectively.

This appendix provides an outline of the 2013–2022 development-related capital program for storm water drainage and the calculation of the “unadjusted” DC and the calculated charge after cash flow considerations. The cost, quantum and timing of the projects identified in the program have been provided by Toronto Water and Waterfront Toronto staff and are based on the 2013 approved capital budget, previous DC studies, and other long-range planning documents.

A historic service level analysis is not required for storm water services since Provincial and City environmental standards determine the increased need for service for storm infrastructure based on the anticipated development.

The following discusses the individual components included in the storm water service category. The analysis is set out in the tables which follow. The tables include:

Table 1      2013–2022 Development-Related Capital Program and Calculation of the Discounted Growth-Related Net Capital Costs

Table 2      Cash Flow Analysis

#### A. DEVELOPMENT-RELATED CAPITAL PROGRAM

The 2013–2022 development-related capital program includes a wide variety of projects for the provision of storm water services in the City and amounts to a total gross cost of \$1.2 billion, as shown in Table 1.

Of the \$1.2 billion in development-related infrastructure, \$721.8 million relates to basement flooding, end of pipe facilities, Wet Weather Flow Master Plan projects, stream erosion control, tunnel retrofits, Emery Creek Pond and Toronto and Region Conservation Authority (TRCA) capital projects.

The second largest component of the capital program relates to \$260.7 million for projects required as a result of the development of the Port Lands area. Additionally, projects totalling \$179.8 million are required as a result of growth in the West Don Lands and East Bayfront areas.

## **B. CALCULATION OF DISCOUNTED DEVELOPMENT-RELATED CAPITAL COSTS**

### **1. Grants, Subsidies and Other Recoveries**

Approximately \$162.8 million in senior government grants is anticipated for the West Don Lands storm water works. This amount is netted off the DC calculation.

### **2. Replacement and Benefit to Existing Shares**

The replacement and benefit to existing shares have been examined on a project-by-project basis and the nature of each project determined the rationale for the reductions. Generally speaking, shares have been deducted from the net cost of projects that account for portions of the project that relate to state-of-good-repair or the replacement or reconstruction of existing facilities. Those projects that are completely new are deemed to be entirely growth-related and no replacement shares have been deducted from the net cost.

For storm water infrastructure, shares of current and forecast households were used to calculate the benefit to existing shares where they apply. An additional deduction of 50% was made for basement flooding projects since future units in basement flooding areas are more likely to be of a higher density than existing units. In total, \$624.9 million is identified as the replacement and benefit to existing share.

### **3. Legislated 10% Reduction**

As this service is identified in Section 5 (5) of the DCA, a 10% reduction to the net municipal costs is not required.

#### **4. Available DC Reserve Funds**

The City had a December 31, 2012 reserve fund balance for storm water services of \$12.9 million. Funding for 2013 Waterfront storm water infrastructure (\$5.4 million) is deducted resulting in an available reserve fund balance of \$7.5 million. This amount is notionally doubled to \$14.9 million to account for the non-statutory exemptions and phase-in provisions of the City's current in-force DC by-law. The \$14.9 million is deducted from the DC-eligible capital program..

#### **5. Post-2022 Benefit**

Approximately \$250.9 million in post-period DC shares is identified. Consistent with the City's current practice, post-period shares are applied to plant, linear and Port Lands works. The development-related component of these projects is split based on household growth in the 2013–2022 period versus growth in the 2023–2031 period for non-Port Lands projects and growth in the 2023–2041 period for the Port Lands.

After the deductions described above, \$108.7 million is determined to be DC-eligible in the 10-year period and carried forward to the rate calculation.

### **C. CALCULATION OF RESIDENTIAL AND NON-RESIDENTIAL DISCOUNTED DEVELOPMENT-RELATED CAPITAL COSTS**

The discounted development-related costs have been allocated 66.1% to residential development and 33.9% to non-residential development. These percentages are based on shares of 10-year population growth in new units and gross employment growth.

The \$71.9 million in residential development-related residential net capital costs is divided by the population forecast from new housing units of 241,762, yielding a per capita charge of \$297.48 before cash flow adjustments.

The non-residential unadjusted charge per square metre is calculated by taking the \$36.8 million allocated to the non-residential sector and dividing it by 5.2 million square metres of new non-residential floor space. This yields an unadjusted charge of \$7.08 per square metre of GFA.

#### D. CASH FLOW ANALYSIS

A cash flow analysis is also undertaken to account for the timing of projects and receipt of DCs. Interest earnings or borrowing costs are, therefore, accounted for in the calculation as allowed under the *DCA*. Based on the development forecast, the analysis calculates the DC rate required to finance the discounted development-related capital spending plan including provisions for any borrowing costs or interest earnings on the reserve funds. The cash flow analysis is designed so that the closing cash balance at the end of the planning period is as close to nil as possible.

In order to determine appropriate DC rates reflecting borrowings and earnings necessary to support the discounted development-related funding requirement, assumptions are used for the inflation rate and interest rate. An inflation rate of 2.0% is used for the funding requirements, an interest rate of 3.5% is used for positive opening balances, and a rate of 5.5% is used for negative opening balances.

Table 2 displays the results of the cash flow analysis and provides the adjusted or final per capita residential and per square metre (of GFA) non-residential DCs. After cash flow consideration, the residential calculated charge decreases to \$291.63 per capita. The non-residential charge after cash flow decreases slightly to \$7.00 per square metre of GFA.

The following table summarizes the calculation of the storm water DC.

| <b>STORM WATER</b>                  |                    |                    |         |                    |               |

**APPENDIX B.7**  
***PARKS AND RECREATION***  
***APPENDIX***

## APPENDIX B.7

### PARKS AND RECREATION SERVICES TECHNICAL APPENDIX

The Parks, Forestry and Recreation Division is responsible for the provision of parks and recreation services throughout the City. Parks and recreation services are provided through numerous indoor recreation facilities, developed parkland, park amenities and special facilities with a total replacement value estimated at \$5.54 billion in 2012.

This appendix provides a brief outline of historic service levels for parks and recreation services, the 2013–2022 development-related capital program, the calculation of the "unadjusted" DC, and the calculated charge after cash flow considerations. The cost, quantum and timing of the projects identified in the program have been provided by City staff and are based on the Council-approved capital budget, previous DC studies, and other long-range planning documents. The portion of the development-related capital program included in the calculation of the DC is the lesser of that identified in the capital program and that which would be generated by the application of the average level of service provided over the past 10 years. Consistent with s. 5 (1) 7 of the DCA, the eligible development-related net capital cost for the provision of parks and recreation services is reduced by 10% in calculating the DC.

The following discusses the individual components included in the parks and recreation service category. The analysis is set out in the tables which follow. The tables include:

|         |  |
|---------|--|
| Table 1 | Historic Service Levels and Calculation of 10-Year Average Service Level   |
| Table 2 | 2013–2022 Development-Related Capital Program and Calculation of the Discounted Growth-Related Net Capital Costs |
| Table 3 | Cash Flow Analysis   |

## **A. HISTORIC SERVICE LEVELS AND CALCULATION OF 10-YEAR AVERAGE SERVICE LEVELS AND MAXIMUM ALLOWABLE CHARGES**

Parks and recreation services are currently provided through numerous indoor recreation facilities, sports fields, parks and special facilities with a value of \$5.54 billion in 2012. In general, the asset replacement values are based upon an engineer's audit of facilities undertaken in 2008 and the costs have been inflated to 2012 dollars. The replacement value for the lands associated with the indoor recreation facilities were taken from a database containing all City-owned real estate assets and was provided by the City's Facilities and Real Estate Division.

The community centres, arenas, pools and special facilities are itemized individually, including associated land parcels for each indoor recreation facility. The replacement costs for indoor recreation facilities also include an additional 2% to account for fixtures, furniture and equipment, which is consistent with this division's budgeting practices.

For the purposes of the DC background study, the City's parks have been grouped into five categories. The categories are: parkettes, neighbourhood parks, community parks, district parks, and City-wide parks. The categories reflect the cost to develop parkland (i.e. all above-base park improvements), based on the size and nature of the parks. The cost of the parkland itself is not included in the level of service analysis, as it is an ineligible service; however, the cost for all above base park improvements has been captured in the replacement cost per hectare of \$1.2 million. For the City-wide parks, the replacement cost is lower at \$117,000 per hectare as this value reflects the open and passive space contained in the City-wide parks.

This replacement value for the larger parks, "destination parks," for example, is not appropriate and as such, the above-base park improvements have been captured by facility/asset type.

The last page of Table 1 provides a summary of the level of service and the calculation of the 10-year historic service level. Also shown on this page is the calculation of the maximum allowable funding envelope, which is summarized as follows:

| <b>10-Year Funding Envelope Calculation</b>          |                      |
|--|----------------------|
| 10-Year Average Service Level (2003 – 2012)          | \$2,164.30           |
| Net Population Growth (2013 – 2022)                  | 241,599              |
| Maximum Allowable Funding Envelope                   | \$522,892,716        |
| Less: 10% Legislated Reduction                       | \$52,289,272         |
| <b>Discounted Maximum Allowable Funding Envelope</b> | <b>\$470,603,444</b> |

The existing facilities have been examined and consideration has been given to whether or not “excess capacity” exists within the City’s infrastructure that may be available to partially meet the future servicing requirements. It has been determined that no “uncommitted excess capacity” exists within the City’s parks and recreation infrastructure, and as such, no adjustments have been made to the service level calculations.

## **B. THE DEVELOPMENT-RELATED CAPITAL PROGRAM**

The 2013–2022 development-related capital program includes a wide variety of projects for the provision of parks and recreation services in the City and amounts to a total gross cost of \$934.3 million. The City has reviewed its 10-year capital budget to identify which projects will result, in whole or in part, in increased capacity to meet the servicing needs of new development.

The majority of the park development and amenities projects are site-specific and self-explanatory in nature, and some are a continuation of approved plans and strategies such as the Toronto Bike Plan. As for the indoor recreation facilities, the City intends to construct two new pools, nine new community centres, and upgrade three existing arenas. The City is also involved in constructing recreation facilities for the Pan Am Games and two projects have been included in the DC capital program.

Also included in the parks and recreation capital program are parks, open space and other recreation projects undertaken in the Waterfront Toronto and Port Lands areas of the City. Projects include additions and improvements to existing facilities and public realm spaces, and also two new community centres.

The final subsection of the parks and recreation capital program includes developer credits carried forward into this DC calculation, as per Section 8(5) of *O.Reg. 82/98*. The City is proposing to carry forward four developer credits for recovery through the parks and recreation DC.

Paragraph 5 of s.5(1) of the *DCA* requires a deduction from the increase in the need for service attributable to the anticipated development that can be met using the City's "excess capacity," other than excess capacity which is "committed". "Excess capacity" is undefined in the *DCA*, but in this case must be able to meet some or all of the increase in need for service, in order to potentially represent a deduction. The deduction of uncommitted excess capacity from the future increase in the need for service would normally occur as part of the conceptual planning and feasibility work associated with justifying and sizing new facilities. It is proposed that there is no actual "surplus" that exists within parks and recreation.

## **C. CALCULATION OF DISCOUNTED DEVELOPMENT-RELATED CAPITAL COSTS**

### **1. Grants, Subsidies and Other Recoveries**

The reductions to City programming projects under section 7.1 and 7.2 are for the most part to recognize known Sections 37, 42 and 45 contributions at this point in time. For most projects, these developer-related levies generally cover the full gross project cost, leaving no net municipal cost to the City. In the case where a portion of the project is funded through contributions, that amount is netted off of the gross project cost and the remainder is deemed to be the net cost.

The funding for Waterfront Toronto and Port Lands-related recreation projects come from upper-tier governments; both from the Provincial and Federal governments.

In total, \$198.6 million in grants, subsidies, and other recoveries is identified and applied to the DC capital program.

### **2. Replacement and Benefit to Existing Shares**

The replacement and benefit to existing shares have been examined on a project-by-project basis and the nature of each project determined the rationale for the

reductions. Generally speaking, shares have been deducted from the net cost of projects that account for portions of the project that relate to state of good repair or the replacement or reconstruction of existing facilities. Those projects that are completely new are deemed to be entirely growth-related and no replacement shares have been deducted from the net cost.

In total, \$25.7 million is identified as the replacement and benefit to existing share.

### **3. Legislated 10% Reduction**

As this service is not identified in Section 5 (5) of the *DCA*, a 10% reduction to the net municipal costs, less the replacement/benefit to existing shares, is made to each project.

In total, \$71.0 million is identified as the 10% reduction share.

### **4. Post-2022 Benefit**

The total development-related cost of the parks and recreation capital program — \$639.0 million — is greater than the calculated net funding envelope. As such, \$168.4 million of the development-related costs is deemed to be post-period benefit. These costs will be examined in future DC by-laws for recovery, subject to service level limitations.

## **D. CALCULATION OF RESIDENTIAL AND NON-RESIDENTIAL DISCOUNTED DEVELOPMENT-RELATED CAPITAL COSTS**

### **1. Residential and Non-Residential Allocation**

The discounted development-related costs have been allocated 95% to residential development, as these facilities are provided for and planned for use by the residential community, for the most part. A nominal 5% allocation is made for non-residential development recognizing that parks and indoor recreation facilities are used by employees working within the City of Toronto.

The last page of Table 2 displays the 95% allocation to the residential sector, or \$447.1 million, and 5% to the non-residential sector, or \$23.5 million.

This page also displays the calculation of the unadjusted per capita residential charge for recreation facilities. The \$447.1 million in discounted development-related net capital costs is allocated to the 241,762 population forecast from new housing units, yielding a per capita charge of \$1,849.23 before cash flow adjustments.

The non-residential unadjusted charge per square metre is calculated by taking the \$23.5 million allocated to the non-residential sector and dividing it by 5.2 million square metres of new non-residential floor space. This yields an unadjusted charge of \$4.53 per square metre of GFA.

#### **E. CASH FLOW ANALYSIS**

A cash flow analysis is also undertaken to account for the timing of projects and receipt of DCs. Interest earnings or borrowing costs are, therefore, accounted for in the calculation as allowed under the *DCA*. Based on the development forecast, the analysis calculates the DC rate required to finance the discounted development-related capital spending plan, including provisions for any borrowing costs or interest earnings on the reserve funds. The cash flow analysis is designed so that the closing cash balance at the end of the planning period is as close to nil as possible.

In order to determine appropriate DC rates reflecting borrowing and earnings necessary to support the discounted development-related funding requirement, assumptions are used for the inflation rate and interest rate. An inflation rate of 2.0% is used for the funding requirements, an interest rate of 3.5% is used for positive opening balances, and a rate of 5.5% is used for negative opening balances.

Page 1 of Table 3 displays the results of the cash flow analysis and provides the adjusted or final per capita residential and per square metre (of GFA) non-residential development charges. After cash flow consideration, the residential calculated charge increases slightly to \$1,868.73 per capita. The non-residential charge after cash flow increases slightly to \$4.67 per square metre of GFA.

The following table summarizes the calculation of the parks and recreation services DCs.

| <b>PARKS AND RECREATION SUMMARY</b> |                                     |                    |                    |         |                    |               |

**APPENDIX B.8**  

---

***LIBRARY***  
***APPENDIX***

**APPENDIX B.8****LIBRARY  
TECHNICAL APPENDIX**

The Toronto Public Library provides its services from 100 library branches and 3 ancillary buildings. The Library provides a wide range of resources in a variety of formats as well as a number of programs to City residents.

This appendix provides a brief outline of historic service levels for Library Services, the 2013–2022 development-related capital program, the calculation of the "unadjusted" development charge, and the calculated charge after cash flow considerations. The cost, quantum and timing of the projects identified in the program have been provided by City staff and are based upon the Council approved capital budget, previous DC Background Studies, and other long range planning documents. The portion of the development-related capital program included in the calculation of the development charge is the lesser of that identified in the capital program and that which would be generated by the application of the average level of service provided over the past 10 years. Consistent with s. 5 (1) 7 of the *DCA*, the eligible development-related net capital cost for the provision of Library Services is reduced by 10 per cent in calculating the development charges.

The following discusses the individual components included in the Library service category. The analysis is set out in the tables which follow. The tables include:

|         |  |
|---------|--|
| Table 1 | Historic Service Levels and Calculation of 10-Year Average Service Level   |
| Table 2 | 2013–2022 Development-Related Capital Program and Calculation of the Discounted Growth-Related Net Capital Costs |
| Table 3 | Cash Flow Analysis   |

## A. HISTORIC SERVICE LEVELS AND CALCULATION OF 10-YEAR AVERAGE SERVICE LEVELS AND MAXIMUM ALLOWABLE CHARGES

Library services are currently provided through 100 library branches, and 3 ancillary buildings with a value of \$814.2 million in 2012. The building replacement unit cost includes the cost of the building itself (including design, site servicing, and construction) and also the cost of replacing furniture, furnishings and equipment. The replacement cost for the Merrill and Osborne Collections and the Toronto Reference Library warrant a higher unit cost due to specialized storage and environmental control systems.

The land associated with each library building is also included in Table 1. The size of the land provided is the exact footprint of the building using site plans. The replacement value for the lands associated with the indoor recreation facilities were taken from a database containing all City-owned real estate assets and was provided by the City's Facilities and Real Estate Division. In total, the replacement cost of the land associated with library buildings amounts to \$95.3 million.

The average cost for collection materials is \$37. This is based on the average cost to purchase new materials and includes a provision for cataloguing. The current collection holds 13.62 million items and is valued at \$499.9 million. Library vehicles have also been included in the level of service analysis. The vehicles are largely used to transport collection materials from the processing centre to the branches. In 2012 there were 43 vehicles associated with the TPL valued at \$2.8 million. Finally, IT and software assets have been included at a total value of \$16.9 million.

The last page of Table 1 provides a summary of the level of service and the calculation of the ten-year historic service level. Also shown on this page is the calculation of the maximum allowable funding envelope, which is summarized as follows:

| <b>10-Year Funding Envelope Calculation</b>          |                      |
|--|----------------------|
| 10-Year Average Service Level (2003 – 2012)          | \$556.14             |
| Net Population Growth (2013 – 2022)                  | 241,599              |
| Maximum Allowable Funding Envelope                   | \$134,362,868        |
| Less: 10% Legislated Reduction                       | \$13,436,287         |
| <b>Discounted Maximum Allowable Funding Envelope</b> | <b>\$120,926,581</b> |

The existing facilities have been examined and consideration has been made with regard to whether or not “excess capacity” exists within the City’s infrastructure that may be available to partially meet the future servicing requirements. It has been determined that no “uncommitted excess capacity” exists within the City’s library infrastructure, and as such, no adjustments have been made to the service level calculations.

## **B. THE DEVELOPMENT-RELATED CAPITAL PROGRAM**

The 2013–2022 development-related capital program includes a wide variety of projects for the provision of library services in the City and amounts to a total gross cost of \$398.2 million. The City has reviewed its ten-year capital budget to identify which projects that will result, in whole or in part, in increased capacity to meet the servicing needs of new development.

The first section of the Library capital program recovers for renovations and expansions to several existing library branches, the construction of two new branches, and the relocation of the library processing centre. The renovations and expansions and new branches total to \$187.8 million.

The second section of the Library capital program is for development-related library equipment including virtual branch services, which provide web-based access to library services. Self-service circulation and three phases of the technology asset management program have also been included. In total, the equipment purchases amount to \$34.2 million.

The TPL intends to expand its collection materials in order to keep pace with past service levels and to serve future development. The additional library materials are based on the requirements generated by the expansions of current library facilities and also further additions throughout the library system. The additional materials amount to \$174.7 million.

The final subsection of the Library capital program includes developer credits carried forward into this development charge calculation, as per Section 8 (5) of O.Reg. 82/98. The City is proposing to carry forward two developer credits amounting to \$1.6 million for recovery through the Library development charge.

Paragraph 5 of s.s.5(1) requires a deduction from the increase in the need for service attributable to the anticipated development that can be met using the City's "excess capacity," other than excess capacity which is "committed". "Excess capacity" is undefined in the DCA, but in this case must be able to meet some or all of the increase in need for service, in order to potentially represent a deduction. The deduction of uncommitted excess capacity from the future increase in the need for service, would normally occur as part of the conceptual planning and feasibility work associated with justifying and sizing new facilities. It is proposed that there is no actual "surplus" that exists within Library.

## **C. CALCULATION OF DISCOUNTED DEVELOPMENT-RELATED CAPITAL COSTS**

### **1. Grants, Subsidies and Other Recoveries**

The only grant identified in the entire Library capital program is for the renovation of the Toronto Reference Library. A federal grant in the sum of \$320,000 has netted off of the gross project cost.

### **2. Replacement and Benefit to Existing Shares**

The replacement and benefit to existing shares have been examined on a project-by-project basis and the nature of each project determined the rationale for the reductions. Generally speaking, shares have been deducted from the net cost of projects that account for portions of the project that relate to state of good repair or the replacement or reconstruction of existing facilities. Those projects that are completely new are deemed to be entirely growth-related and no replacement shares have been deducted from the net cost.

A review of the TPL's Business Cases for the capital projects reveals that most of the renovations to existing library space is related to rehabilitation of aging assets and is deemed to be state of good repair. However, as a result of the renovations, the library spaces will be reconfigured resulting in a new layouts and increased efficiencies. To recognize this balance between state of good repair and increased efficiencies to the space, a 90 per cent allocation has been made to account for replacement and benefit to existing shares.

This 90 per cent replacement share has also been made to the technology asset management program projects and project 8.3.2 of collection materials. The large replacement share to that library materials projects is in recognition that many of the materials are largely replacements of existing materials.

In total, \$277.3 million is identified as the replacement and benefit to existing share.

### **3. Legislated 10 Per Cent Reduction**

As this service is not identified in Section 5 (5) of the DCA, a ten per cent reduction to the net municipal costs, less the replacement/benefit to existing shares, is made to each project.

In total, \$12.1 million is identified as the 10 per cent reduction share.

### **4. Post-2022 Benefit**

The total development related costs of the Library capital program, \$108.2 million, is within the net funding envelope of \$120.9 million. As such, the entire development related costs are eligible for recovery in the ten-year planning period of 2013 to 2022 of the new DC by-law. No costs are deemed to be of post period benefit.

## **D. CALCULATION OF RESIDENTIAL AND NON-RESIDENTIAL DISCOUNTED DEVELOPMENT-RELATED CAPITAL COSTS**

### **1. Residential and Non-Residential Allocation**

The discounted development-related costs have been allocated 95 per cent to residential development, as these facilities are provided for and planned for use by the residential community, for the most part. A nominal 5 per cent allocation is made for non-residential development recognizing that library facilities are used by employees working within the City of Toronto.

The last page on Table 2 displays the 95 per cent allocation to the residential sector, or \$103.1 million, and 5 per cent to the non-residential sector, or \$5.4 million.

This page also displays the calculation of the unadjusted per capita residential charge for recreation facilities. The \$103.1 million in discounted development-related net

capital costs are allocated to the 241,762 population forecast from new housing units, yielding a per capita charge of \$426.61 before cash flow adjustments.

The non-residential unadjusted charge per square metre is calculated by taking the \$5.4 million allocated to the non-residential sector and dividing it by 5.2 million square metres of new non-residential floor space. This yields an unadjusted charge of \$1.04 per square metre of GFA.

#### **E. CASH FLOW ANALYSIS**

A cash flow analysis is also undertaken to account for the timing of projects and receipt of development charges. Interest earnings or borrowing costs are, therefore, accounted for in the calculation as allowed under the *DCA*. Based on the development forecast, the analysis calculates the development charges rate that is required to finance the discounted development-related capital spending plan including provisions for any borrowing costs or interest earnings on the reserve funds. The cash flow analysis is designed so that the closing cash balance at the end of the planning period is as close to nil as possible.

In order to determine appropriate development charges rates reflecting borrowing and earnings necessary to support the discounted development-related funding requirement, assumptions are used for the inflation rate and interest rate. An inflation rate of 2.0 per cent is used for the funding requirements, an interest rate of 3.5 per cent is used for positive opening balances, and a rate of 5.5 per cent is used for negative opening balances.

Table 3, Page 1 displays the results of the cash flow analysis and provides the adjusted or final per capita residential and per square metre (of GFA) non-residential development charges. After cash flow consideration, the residential calculated charge increases slightly to \$427.92 per capita. The non-residential charge after cash flow increases slightly to \$1.07 per square metre of GFA.

The following table summarizes the calculation of the Library Services development charge.

| <b>LIBRARY SUMMARY</b> |                                     |                    |                    |         |                    |               |
|------------------------|-------------------------------------|--------------------|--------------------|---------|--------------------|---------------|

***APPENDIX***

## APPENDIX B.9

### SUBSIDIZED HOUSING TECHNICAL APPENDIX

The City's Social Housing Unit is responsible for the funding and administration of social housing programs which include the Toronto Community Housing Corporation (TCHC), private non-profit housing, co-operative housing, private rent supplement programs and housing allowance programs.

This appendix provides a brief outline of historic service levels for Subsidized Housing Services, the 2013–2022 development-related capital program, the calculation of the "unadjusted" dc, and the calculated charge after cash flow considerations. The cost, quantum and timing of the projects identified in the program have been provided by City staff and are based on the previous DC Background Studies, and other long-range planning documents. The portion of the development-related capital program included in the calculation of the development charge is the lesser of that identified in the capital program and that which would be generated by the application of the average level of service provided over the past 10 years. Consistent with s. 5 (1) 7 of the *DCA*, the eligible development-related net capital cost for the provision of subsidized housing services is reduced by 10% in calculating the development charges.

The following discusses the individual components included in the Subsidized Housing service category. The analysis is set out in the tables which follow. The tables include:

|         |  |
|---------|--|
| Table 1 | Historic Service Levels and Calculation of 10-Year Average Service Level   |
| Table 2 | 2013–2022 Development-Related Capital Program and Calculation of the Discounted Growth-Related Net Capital Costs |
| Table 3 | Cash Flow Analysis   |

#### **A. HISTORIC SERVICE LEVELS AND CALCULATION OF 10-YEAR AVERAGE SERVICE LEVELS AND MAXIMUM ALLOWABLE CHARGES**

Subsidized housing services are currently providing 106,380 units of varying unit types. These unit types include TCHC, community non-profits, community non-profit co-ops, federal non-profit co-ops, private market housing allowance units, affordable rental housing, and affordable ownership housing.

The average cost to the City to provide these units is \$22,288. The remaining costs are provided through Federal and Provincial grants.

The last page of Table 1 provides a summary of the level of service and the calculation of the 10-year historic service level. Also shown on this page is the calculation of the maximum allowable funding envelope, which is summarized as follows:

| <b>10-Year Funding Envelope Calculation</b>          |                      |
|--|----------------------|
| 10-Year Average Service Level (2003 – 2012)          | \$909.03             |
| Net Population Growth (2013 – 2022)                  | 241,599              |
| Maximum Allowable Funding Envelope                   | \$219,620,739        |
| Less: 10% Legislated Reduction                       | \$21,962,074         |
| <b>Discounted Maximum Allowable Funding Envelope</b> | <b>\$197,658,665</b> |

The existing facilities have been examined and consideration has been made with regard to whether or not “excess capacity” exists within the City’s infrastructure that may be available to partially meet the future servicing requirements. It has been determined that no “uncommitted excess capacity” exists within the City’s subsidized housing infrastructure, and as such, no adjustments have been made to the service level calculations.

#### **B. DEVELOPMENT-RELATED CAPITAL PROGRAM**

The 2013–2022 development-related capital program includes a provision for an annual commitment of 1,000 subsidized housing units for the next 10 years. This

target is sourced from Council's endorsement of the "Streets to Homes Report in 2005, and carried forward from the previous DC Background Study.

The capital program also provides for an annual commitment of 200 affordable ownership units for the next 10 years. This commitment is sourced from the City's Housing Plan.

In total, the capital program amounts to \$266.8 million. This is solely the City's share of the cost of the projects.

Paragraph 5 of s.s.5(1) of the *DCA* requires a deduction from the increase in the need for service attributable to the anticipated development that can be met using the City's "excess capacity," other than excess capacity which is "committed". "Excess capacity" is undefined in the *DCA*, but in this case must be able to meet some or all of the increase in need for service, in order to potentially represent a deduction. The deduction of uncommitted excess capacity from the future increase in the need for service would normally occur as part of the conceptual planning and feasibility work associated with justifying and sizing new facilities. It is proposed that no actual "surplus" exists within subsidized housing.

## **C. CALCULATION OF DISCOUNTED DEVELOPMENT-RELATED CAPITAL COSTS**

### **1. Grants, Subsidies and Other Recoveries**

No additional subsidies or other recoveries are anticipated for subsidized housing. The City receives Federal and Provincial grants to fund these programs; however, the costs included in the DC Study are net of these upper-level grants.

### **2. Replacement and Benefit to Existing Shares**

The replacement and benefit to existing shares for subsidized housing have been carried forward from the previous DC Study. A 65% benefit to existing share has been applied to all of the project costs. This is partly in recognition of the current number of total households on the wait list.

In total, \$173.4 million is identified as the replacement and benefit to existing share.

### **3. Legislated 10% Cent Reduction**

As this service is not identified in Section 5 (5) of the *DCA*, a 10% cent reduction to the net municipal costs, less the replacement/benefit to existing shares, is made to each project.

In total, \$9.3 million is identified as the 10% reduction share.

### **4. Post-2022 Benefit**

The total development-related costs of the subsidized housing capital program - \$84.0 million - is within the net funding envelope of \$197.7 million. As such, the entire development-related costs are eligible for recovery in the 10-year planning period from 2013 to 2022. No costs are deemed to be of post-period benefit.

## **D. CALCULATION OF RESIDENTIAL AND NON-RESIDENTIAL DISCOUNTED DEVELOPMENT-RELATED CAPITAL COSTS**

### **1. Residential and Non-Residential Allocation**

The discounted development-related costs have been entirely allocated 100% to residential development, as these facilities are provided for and planned for use solely by the residential community.

Table 2 displays the 100% allocation to the residential sector, or \$84.2 million. This page also displays the calculation of the unadjusted per capita residential charge. The \$84.0 million in discounted development-related net capital costs is allocated to the 241,762 population forecast from new housing units, yielding a per capita charge of \$347.60 before cash flow adjustments.

## **E. CASH FLOW ANALYSIS**

A cash flow analysis is also undertaken to account for the timing of projects and receipt of development charges. Interest earnings or borrowing costs are, therefore, accounted for in the calculation as allowed under the *DCA*. Based on the development forecast, the analysis calculates the development charges rate that is required to finance the discounted development-related capital spending plan including provisions for any borrowing costs or interest earnings on the reserve funds. The cash flow analysis is designed so that the closing cash balance at the end of the planning period is as close to nil as possible.

In order to determine appropriate development charges rates reflecting borrowing and earnings necessary to support the discounted development-related funding requirement, assumptions are used for the inflation rate and interest rate. An inflation rate of 2.0% is used for the funding requirements, an interest rate of 3.0% is used for positive opening balances, and a rate of 5.5% is used for negative opening balances.

Table 3 displays the results of the cash flow analysis and provides the adjusted or final per capita residential and per square metre (of GFA) non-residential development charges. After cash flow consideration, the residential calculated charge decreases slightly to \$344.90 per capita.

The following table summarizes the calculation of the Subsidized Housing Services development charge.

| <b>SUBSIDIZED HOUSING SUMMARY</b>               |  |                    |                                  |         |                                |               |

***APPENDIX***

## APPENDIX B.10

### POLICE TECHNICAL APPENDIX

This appendix provides a brief outline of historic service levels for police services, the 2013–2022 development-related capital program, the calculation of the "unadjusted" development charge, and the calculated charge after cash flow considerations. The cost, quantum and timing of the projects identified in the program have been provided by City staff and are based upon the Council-approved capital budget, previous DC Background Studies, and other long-range planning documents. The portion of the development-related capital program included in the calculation of the development charge is the lesser of that identified in the capital program and that which would be generated by the application of the average level of service provided over the past 10 years.

The following discusses the individual components included in the police service category. The analysis is set out in the tables which follow. The tables include:

|         |  |
|---------|--|
| Table 1 | Historic Service Levels and Calculation of 10-Year Average Service Level   |
| Table 2 | 2013–2022 Development-Related Capital Program and Calculation of the Discounted Growth-Related Net Capital Costs |
| Table 3 | Cash Flow Analysis   |

#### A. HISTORIC SERVICE LEVELS AND CALCULATION OF 10-YEAR AVERAGE SERVICE LEVELS AND MAXIMUM ALLOWABLE CHARGES

police services are currently provided through 2.6 million square feet of building space associated with Toronto Police Services. The building space in 2012 is valued at \$1.13 billion and is derived by applying a unit cost of \$430/square foot to the building space. The replacement value used for police buildings is based upon the construction cost of 11 Division, which is the most recent build that is considered to be a 'standard' police building.

The land associated with each police building is also included in Table 1. The replacement value for the lands associated with the police facilities were taken from a database containing all City-owned real estate assets and was provided by the City's Facilities and Real Estate Division. In total, the replacement cost of the land associated with police buildings amounts to \$347.9 million.

Vehicles and all police equipment were also included in the level of service calculation. The vehicles add \$53.7 million to the inventory and the equipment adds another \$243.2 million.

The last page of Table 1 provides a summary of the level of service and the calculation of the 10-year historic service level. Also shown on this page is the calculation of the maximum allowable funding envelope, which is summarized as follows:

| <b>10-Year Funding Envelope Calculation</b>      |                      |
|--|----------------------|
| 10-Year Average Service Level (2003 – 2012)      | \$369.20             |
| Net Population & Employment Growth (2013 – 2022) | 336,284              |
| <b>Maximum Allowable Funding Envelope</b>        | <b>\$124,145,053</b> |

The existing facilities have been examined and consideration has been made with regard to whether or not “excess capacity” exists within the City's infrastructure that may be available to partially meet the future servicing requirements. It has been determined that no “uncommitted excess capacity” exists within the City's police infrastructure, and as such, no adjustments have been made to the service level calculations.

## **B. DEVELOPMENT-RELATED CAPITAL PROGRAM**

The City has reviewed its 10-year capital budget to identify which projects that will result, in whole or in part, in increased capacity to meet the servicing needs of new development. The 2013–2022 development-related capital program includes the replacement and expansion of three divisions, a disaster recovery site, and the relocation and expansion of the PSU and FSI. The new fibre optics network and the

integrated records and information systems are also recovered through this capital program. The total gross cost of this capital program is \$167.8 million.

Paragraph 5 of s.s.5(1) of the *DCA* requires a deduction from the increase in the need for service attributable to the anticipated development that can be met using the City's "excess capacity," other than excess capacity which is "committed". "Excess capacity" is not defined in the *DCA*, but in this case must be able to meet some or all of the increase in need for service, in order to potentially represent a deduction. The deduction of uncommitted excess capacity from the future increase in the need for service would normally occur as part of the conceptual planning and feasibility work associated with justifying and sizing new facilities. It is proposed that there is no actual "surplus" that exists within police services.

### **C. CALCULATION OF DISCOUNTED DEVELOPMENT-RELATED CAPITAL COSTS**

#### **1. Grants, Subsidies and Other Recoveries**

No grants, subsidies or other recoveries have been identified to fund any of the development-related projects to be recovered through development charges. As such, no deductions have been made in this regard.

#### **2. Replacement and Benefit to Existing Shares**

The replacement and benefit to existing shares have been examined on a project-by-project basis and the nature of each project determined the rationale for the reductions. Generally speaking, shares have been deducted from the net cost of projects that account for portions of the project that relate to state of good repair or the replacement or reconstruction of existing facilities.

For the buildings that have a replacement and an expansion component to them, the net increment gain in building space is deemed to be the development-related portion of the project, and the remaining is deemed to be the growth-related share. This percentage varies from project to project.

As for the equipment acquisitions, the portion related to the cost of the "current" system or asset that will be replaced is deemed to be the benefit to existing share.

In total, \$94.9 million is identified as the replacement and benefit to existing share.

### **3. Legislated 10% Reduction**

As this service is identified in Section 5 (5) of the *DCA*, a 10% reduction to the net municipal costs is not required. No shares are identified as the legislated 10% reduction share.

### **4. Post-2022 Benefit**

The total development-related costs of the police capital program - \$72.9 million - is within the net funding envelope of \$124.2 million. As such, the entire development-related costs are eligible for recovery in the 10-year planning period of 2013 to 2022 of the new DC by-law. No costs are deemed to be of post-period benefit.

## **D. CALCULATION OF RESIDENTIAL AND NON-RESIDENTIAL DISCOUNTED DEVELOPMENT-RELATED CAPITAL COSTS**

### **1. Residential and Non-Residential Allocation**

The discounted development-related costs have been allocated 66% to residential development, and 34% to the non-residential sector. This sector allocation is based on future shares of population growth in new units (241,762) and employment growth in new space (123,800).

Table 2 displays the 66% allocation to the residential sector, or \$48.2 million, and 34 % to the non-residential sector, or \$24.7 million.

This page also displays the calculation of the unadjusted per capita residential charge for police. The \$48.2 million in discounted development-related net capital costs are allocated to the 241,762 population forecast from new housing units, yielding a per capita charge of \$199.30 before cash flow adjustments.

The non-residential unadjusted charge per square metre is calculated by taking the \$24.7 million allocated to the non-residential sector and dividing it by 5.2 million square metres of new non-residential floor space. This yields an unadjusted charge of \$4.74 per square metre of GFA.

## **E. CASH FLOW ANALYSIS**

A cash flow analysis is also undertaken to account for the timing of projects and receipt of development charges. Interest earnings or borrowing costs are, therefore, accounted for in the calculation as allowed under the *DCA*. Based on the

development forecast, the analysis calculates the development charges rate that is required to finance the discounted development-related capital spending plan including provisions for any borrowing costs or interest earnings on the reserve funds. The cash flow analysis is designed so that the closing cash balance at the end of the planning period is as close to nil as possible.

In order to determine appropriate development charges rates reflecting borrowing and earnings necessary to support the discounted development-related funding requirement, assumptions are used for the inflation rate and interest rate. An inflation rate of 2.0% is used for the funding requirements, an interest rate of 3.5% is used for positive opening balances, and a rate of 5.5% is used for negative opening balances.

Page 1 of Table 3 displays the results of the cash flow analysis and provides the adjusted or final per capita residential and per square metre (of GFA) non-residential development charges. After cash flow consideration, the residential calculated charge increases slightly to \$198.54 per capita. The non-residential charge after cash flow increases slightly to \$4.80, per square metre of GFA.

The following table summarizes the calculation of the police Services development charge.

| <b>POLICE SUMMARY</b>                           |  |                    |                                  |         |                                |               |

***APPENDIX***

## APPENDIX B.11

### FIRE TECHNICAL APPENDIX

This appendix provides a brief outline of historic service levels for Toronto Fire Services, the 2013–2022 development-related capital program, the calculation of the "unadjusted" development charge, and the calculated charge after cash flow considerations. The cost, quantum and timing of the projects identified in the program have been provided by City staff and are based upon the Council-approved capital budget, previous DC Background Studies, and other long-range planning documents. The portion of the development-related capital program included in the calculation of the development charge is the lesser of that identified in the capital program and that which would be generated by the application of the average level of service provided over the past 10 years.

The following discusses the individual components included in the Fire service category. The analysis is set out in the tables which follow. The tables include:

|         |  |
|---------|--|
| Table 1 | Historic Service Levels and Calculation of 10-Year Average Service Level   |
| Table 2 | 2013–2022 Development-Related Capital Program and Calculation of the Discounted Growth-Related Net Capital Costs |
| Table 3 | Cash Flow Analysis   |

#### **A. HISTORIC SERVICE LEVELS AND CALCULATION OF 10-YEAR AVERAGE SERVICE LEVELS AND MAXIMUM ALLOWABLE CHARGES**

Fire services are currently provided through 763,300 square feet of station space and ancillary buildings. The building space in 2012 is valued at \$343.5 million and is derived by applying a unit cost of \$450/square foot to the building space. The replacement value used for fire stations is based upon the construction cost of a station that was recently constructed.

The land associated with each Fire building is also included in Table 1. The replacement value for the lands associated with the Fire facilities were taken from a database containing all City-owned real estate assets and was provided by the City's Facilities and Real Estate Division. In total, the replacement cost of the land associated with Fire buildings amounts to \$303.6 million.

There are currently 348 fire vehicles in the TFS fleet. Each vehicle unit cost includes the cost of acquiring the vehicle itself, in addition to equipment that is purchased and kept on board each vehicle. In total, the value of the vehicles in 2012 was \$92.4 million.

The last page of Table 1 provides a summary of the level of service and the calculation of the 10-year historic service level. Also shown on this page is the calculation of the maximum allowable funding envelope, which is summarized as follows:

| <b>10-Year Funding Envelope Calculation</b>      |                     |
|--|---------------------|
| 10-Year Average Service Level (2003 – 2012)      | \$179.90            |
| Net Population & Employment Growth (2013 – 2022) | 336,284             |
| <b>Maximum Allowable Funding Envelope</b>        | <b>\$60,497,492</b> |

The existing facilities have been examined and consideration has been made with regard to whether or not “excess capacity” exists within the City’s infrastructure that may be available to partially meet the future servicing requirements. It has been determined that no “uncommitted excess capacity” exists within the City’s Fire infrastructure, and as such, no adjustments have been made to the service level calculations.

## **B. DEVELOPMENT-RELATED CAPITAL PROGRAM**

The City has reviewed its 10-year capital budget to identify which projects will result, in whole or in part, in increased capacity to meet the servicing needs of new development. The 2013–2022 development-related capital program includes the construction of four new fire stations and two fire master plans.

The construction cost of the brand new stations amounts to \$32.9 million and the fire master plans cost \$250,000 each. The total cost of the Fire Services DC capital program is \$33.5 million.

Paragraph 5 of s.s.5(1) of the *DCA* requires a deduction from the increase in the need for service attributable to the anticipated development that can be met using the City's "excess capacity," other than excess capacity which is "committed". "Excess capacity" is undefined in the *DCA*, but in this case must be able to meet some or all of the increase in need for service, in order to potentially represent a deduction. The deduction of uncommitted excess capacity from the future increase in the need for service, would normally occur as part of the conceptual planning and feasibility work associated with justifying and sizing new facilities. It is proposed that there is no actual "surplus" that exists within Fire.

## **C. CALCULATION OF DISCOUNTED DEVELOPMENT-RELATED CAPITAL COSTS**

### **1. Grants, Subsidies and Other Recoveries**

No grants, subsidies or other recoveries have been identified to fund any of the development-related projects to be recovered through development charges. As such, no deductions have been made in this regard.

### **2. Replacement and Benefit to Existing Shares**

The replacement and benefit to existing shares have been examined on a project-by-project basis and the nature of each project determined the rationale for the reductions.

The four stations that are planned to be constructed are completely new stations, and will be in addition to the current number of stations. No fire stations will be decommissioned as a result of these four stations opening. As such, no replacement share has been allocated to the cost of the stations.

A component of the fire master plan will address current operations and the deployment of TFS facilities, apparatus and staffing. While a fire master plan will certainly address how to service new growth, a large portion of the study is to addresses current operations. The share of future population and employment growth, in relation to the City's current population and employment has been used as the benefit to existing share.

In total, \$450,000 is identified as the replacement and benefit to existing share.

### **3. Legislated 10% Reduction**

As this service is identified in Section 5 (5) of the DCA, a 10% reduction to the net municipal costs is not required. No shares are identified as the legislated 10% reduction share.

### **4. Post-2022 Benefit**

The total development-related costs of the Fire capital program - \$33.0 million - is within the net funding envelope of \$60.5 million. As such, the entire development related costs are eligible for recovery in the 10-year planning period of 2013 to 2022 of the new DC by-law. No costs are deemed to be of post-period benefit.

## **D. CALCULATION OF RESIDENTIAL AND NON-RESIDENTIAL DISCOUNTED DEVELOPMENT-RELATED CAPITAL COSTS**

### **1. Residential and Non-Residential Allocation**

The discounted development-related costs have been allocated 66% to residential development, and 34% to the non-residential sector. This sector allocation is based upon future shares population growth in new units (241,762) and employment growth in new space (123,800).

Table 2 displays the 66% allocation to the residential sector, or \$21.8 million, and 34% to the non-residential sector, or \$11.2 million.

This page also displays the calculation of the unadjusted per capita residential charge for Fire. The \$21.8 million in discounted development-related net capital costs are allocated to the 241,762 population forecast from new housing units, yielding a per capita charge of \$90.37 before cash flow adjustments.

The non-residential unadjusted charge per square metre is calculated by taking the \$11.2 million allocated to the non-residential sector and dividing it by 5.2 million square metres of new non-residential floor space. This yields an unadjusted charge of \$2.15 per square metre of GFA.

## **E. CASH FLOW ANALYSIS**

A cash flow analysis is also undertaken to account for the timing of projects and receipt of development charges. Interest earnings or borrowing costs are, therefore,

accounted for in the calculation as allowed under the *DCA*. Based on the development forecast, the analysis calculates the development charges rate that is required to finance the discounted development-related capital spending plan including provisions for any borrowing costs or interest earnings on the reserve funds. The cash flow analysis is designed so that the closing cash balance at the end of the planning period is as close to nil as possible.

In order to determine appropriate development charges rates reflecting borrowing and earnings necessary to support the discounted development-related funding requirement, assumptions are used for the inflation rate and interest rate. An inflation rate of 2.0% is used for the funding requirements, an interest rate of 3.5% is used for positive opening balances, and a rate of 5.5% is used for negative opening balances.

Page 1 of Table 3 displays the results of the cash flow analysis and provides the adjusted or final per capita residential and per square metre (of GFA) non-residential development charges. After cash flow consideration, the residential calculated charge increases slightly to \$92.72 per capita. The non-residential charge after cash flow increases slightly to \$2.26, per square metre of GFA.

The following table summarizes the calculation of the Fire Services development charge.

***EMS***

***APPENDIX***

## APPENDIX B.12

### EMS TECHNICAL APPENDIX

This appendix provides a brief outline of historic service levels for Emergency Medical Services (EMS), the 2013–2022 development-related capital program, the calculation of the "unadjusted" development charge, and the calculated charge after cash flow considerations. The cost, quantum and timing of the projects identified in the program have been provided by City staff and are based upon the Council-approved capital budget, previous DC Background Studies, and other long-range planning documents. The portion of the development-related capital program included in the calculation of the development charge is the lesser of that identified in the capital program and that which would be generated by the application of the average level of service provided over the past 10 years. Consistent with s. 5 (1) 7 of the DCA, the eligible development-related net capital cost for the provision of EMS Services is reduced by 10% in calculating the development charges.

The following discusses the individual components included in the EMS service category. The analysis is set out in the tables which follow. The tables include:

|         |  |
|---------|--|
| Table 1 | Historic Service Levels and Calculation of 10-Year Average Service Level   |
| Table 2 | 2013–2022 Development-Related Capital Program and Calculation of the Discounted Growth-Related Net Capital Costs |
| Table 3 | Cash Flow Analysis   |

#### **A. HISTORIC SERVICE LEVELS AND CALCULATION OF 10-YEAR AVERAGE SERVICE LEVELS AND MAXIMUM ALLOWABLE CHARGES**

EMS currently operates out of 42 stations, and several other related buildings and facilities that amount to over 260,000 square feet of building space. The buildings have a value of \$121.4 million. The average unit cost per square foot to replace EMS

buildings was derived by the average cost of constructing three of the most recent stations.

The land associated with each EMS building is also included in Table 1. The size of the land parcels were provided by EMS staff. The replacement value for the lands associated with the EMS facilities were taken from a database containing all City-owned real estate assets and was provided by the City's Facilities and Real Estate Division. In total, the replacement cost of the land associated with EMS buildings amounts to \$79.6 million.

There are currently 296 fire vehicles in the EMS fleet. Each vehicle unit cost includes the cost of acquiring the vehicle itself, in addition to equipment that is purchased and kept on board each vehicle. In total, the value of the vehicles in 2012 was \$43.0 million. Finally, EMS equipment is also included in the level of service analysis and adds another \$11.2 million to the inventory.

The last page of Table 1 provides a summary of the level of service and the calculation of the 10-year historic service level. Also shown on this page is the calculation of the maximum allowable funding envelope, which is summarized as follows:

| <b>10-Year Funding Envelope Calculation</b>          |                     |
|--|---------------------|
| 10-Year Average Service Level (2003 – 2012)          | \$59.98             |
| Net Population & Employment Growth (2013 – 2022)     | 336,284             |
| Maximum Allowable Funding Envelope                   | \$20,170,314        |
| Less: 10% Legislated Reduction                       | \$2,017,031         |
| <b>Discounted Maximum Allowable Funding Envelope</b> | <b>\$18,153,283</b> |

The existing facilities have been examined and consideration has been made with regard to whether or not “excess capacity” exists within the City's infrastructure that may be available to partially meet the future servicing requirements. It has been determined that no “uncommitted excess capacity” exists within the City's EMS infrastructure, and as such, no adjustments have been made to the service level calculations.

## **B. DEVELOPMENT-RELATED CAPITAL PROGRAM**

The City has reviewed its 10-year capital budget to identify which projects that will result, in whole or in part, in increased capacity to meet the servicing needs of new development. The 2013–2022 development-related capital program includes the replacement of Station 51 and at Plewes Road, the reconstruction of two stations, and the addition of two new stations.

New equipment purchases related to the communications network and also defibrillators are also included in the capital program. The total gross cost of this capital program is \$42.7 million.

Paragraph 5 of s.s.5(1) of the *DCA* requires a deduction from the increase in the need for service attributable to the anticipated development that can be met using the City’s “excess capacity,” other than excess capacity which is “committed”. “Excess capacity” is undefined in the *DCA*, but in this case must be able to meet some or all of the increase in need for service, in order to potentially represent a deduction. The deduction of uncommitted excess capacity from the future increase in the need for service, would normally occur as part of the conceptual planning and feasibility work associated with justifying and sizing new facilities. It is proposed that there is no actual “surplus” that exists within EMS.

## **C. CALCULATION OF DISCOUNTED DEVELOPMENT-RELATED CAPITAL COSTS**

### **1. Grants, Subsidies and Other Recoveries**

No grants, subsidies or other recoveries have been identified to fund any of the development-related projects to be recovered through development charges. As such, no deductions have been made in this regard.

### **2. Replacement and Benefit to Existing Shares**

The replacement and benefit to existing shares have been examined on a project-by-project basis and the nature of each project determined the rationale for the reductions. Generally speaking, shares have been deducted from the net cost of projects that account for portions of the project that relate to state-of-good-repair or the replacement or reconstruction of existing facilities.

For the buildings that have a replacement and expansion component to them, the net increment gain in building space is deemed to be the development-related portion of the project, and the remaining is deemed to be the growth-related share. This percentage varies from project to project.

As for the Equipment acquisitions, the portion related to the cost of the “current” system or asset that will be replaced, is deemed to be the benefit to existing share.

In total, \$8.7 million is identified as the replacement and benefit to existing share.

### **3. Legislated 10% Reduction**

As this service is not identified in Section 5 (5) of the *DCA*, a 10% reduction to the net municipal costs, less the replacement/benefit to existing shares, is made to each project.

In total, \$3.4 million is identified as the 10% reduction share.

### **4. Post-2022 Benefit**

\$12.4 million has been attributed to post period benefit of the total development-related cost of \$30.6 million. This relates to the development-related capital program being in excess of the 10-year service level and maximum funding envelope of \$18.2 million. The post-period benefit shares are still deemed to be development-related, however, not eligible for recovery in this by-law period. These shares will be examined for recovery through subsequent reviews of the DC by-law.

## **D. CALCULATION OF RESIDENTIAL AND NON-RESIDENTIAL DISCOUNTED DEVELOPMENT-RELATED CAPITAL COSTS**

### **1. Residential and Non-Residential Allocation**

The discounted development-related costs have been allocated 66% to residential development, and 34% to the non-residential sector. This sector allocation is based upon future shares population growth in new units (241,762) and employment growth in new space (123,800).

Table 2 displays the 66% allocation to the residential sector, or \$12.0 million, and 34% to the non-residential sector, or \$6.1 million.

This page also displays the calculation of the unadjusted per capita residential charge for EMS. The \$12.0 million in discounted development-related net capital costs are

allocated to the 241,762 population forecast from new housing units, yielding a per capita charge of \$49.66 before cash flow adjustments.

The non-residential unadjusted charge per square metre is calculated by taking the \$6.1 million allocated to the non-residential sector and dividing it by 5.2 million square metres of new non-residential floor space. This yields an unadjusted charge of \$1.18 per square metre of GFA.

## **E. CASH FLOW ANALYSIS**

A cash flow analysis is also undertaken to account for the timing of projects and receipt of development charges. Interest earnings or borrowing costs are, therefore, accounted for in the calculation as allowed under the *DCA*. Based on the development forecast, the analysis calculates the development charges rate that is required to finance the discounted development-related capital spending plan including provisions for any borrowing costs or interest earnings on the reserve funds. The cash flow analysis is designed so that the closing cash balance at the end of the planning period is as close to nil as possible.

In order to determine appropriate development charges rates reflecting borrowing and earnings necessary to support the discounted development-related funding requirement, assumptions are used for the inflation rate and interest rate. An inflation rate of 2.0% is used for the funding requirements, an interest rate of 3.5% is used for positive opening balances, and a rate of 5.5% is used for negative opening balances.

Table 3 displays the results of the cash flow analysis and provides the adjusted or final per capita residential and per square metre (of GFA) non-residential development charges. After cash flow consideration, the residential calculated charge increases slightly to \$52.26 per capita. The non-residential charge after cash flow increases slightly to \$1.28 per square metre of GFA.

The following table summarizes the calculation of the EMS Services development charge.

| <b>EMERGENCY MEDICAL SERVICES SUMMARY</b> |                                     |                    |                    |         |                    |               |

## APPENDIX B.13

### DEVELOPMENT-RELATED STUDIES TECHNICAL APPENDIX

This appendix provides a brief outline of historic service levels for Development-Related Studies, the 2013–2022 development-related capital program, the calculation of the "unadjusted" development charge, and the calculated charge after cash flow considerations. The cost, quantum and timing of the projects identified in the program have been provided by City staff and are based upon the Council approved capital budget, previous DC Background Studies, and other long range planning documents. Consistent with s.5(1).7 of the *DCA*, the eligible development-related net capital cost for the provision of Development-Related Studies is reduced by 10% in calculating the development charges.

The following discusses the individual components included in the Development-Related Studies category. The analysis is set out in the tables which follow. The tables include:

Table 1            2013–2022 Development-Related Capital Program and Calculation of the Discounted Growth-Related Net Capital Costs

Table 2            Cash Flow Analysis

#### A. THE DEVELOPMENT-RELATED CAPITAL PROGRAM

The City has reviewed its 10-year capital budget to identify which studies will result, in whole or in part, in increased capacity to meet the servicing needs of new development. The 2013–2022 development-related capital program includes studies for the Planning, Transportation, and Finance departments. Also included are studies directly related to planning in the Waterfront Toronto and Port Lands area of the City.

The City programming studies amount to \$22.5 million and they include studies such as the new Official Plan (OP), Zoning By-law, OP Compliance Review,

Transportation and Transit Planning Studies, Avenue Studies, Growth Studies, and finally Finance-related studies.

The Waterfront Toronto Studies are mainly related to the Lower Don Lands and Port Lands Planning areas and Environmental Assessments. One Lower Yonge planning study is also included in this section. The total amount of studies in the Waterfront Toronto area is \$26.5 million.

Finally, two studies in the Port Lands planning area have been included for recovery. This includes a Port Lands Planning Framework, and a Film Studio District Precinct Plan. These amount to \$205,000.

## **B. CALCULATION OF DISCOUNTED DEVELOPMENT-RELATED CAPITAL COSTS**

### **1. Grants, Subsidies and Other Recoveries**

The reductions to development-related studies under section 13.2 all come from upper-tier grants; both from the Province and the Federal Government.

In total, \$18.0 million in grants have been identified and applied to the DC capital program.

### **2. Replacement and Benefit to Existing Shares**

The replacement and benefit to existing shares have been examined on a project-by-project basis and the nature of each project determined the rationale for the reductions. Generally speaking, shares have been deducted from the net cost of studies that account for portions of the study that benefits the existing population of Toronto.

Most of the studies are driven largely by new development, including the Waterfront Toronto and Port Lands area studies. There are some studies, however, that the City would undertake even in the absence of development (i.e. – Official Plan). The OP recognizes the existing planning framework, but also addresses future development-related challenges.

For studies that confer some benefit to the existing development, a one-third deduction has been made to the net cost of the study. Waterfront Toronto Studies are deemed to be fully growth-related, Port Lands studies have been allocated a 50% benefit to existing share.

In total, \$3.8 million is identified as the replacement and benefit to existing share.

### **3. Legislated 10% Reduction**

As this service is not identified in Section 5 (5) of the DCA, a ten% reduction to the net costs, less the replacement/benefit to existing shares, is made to each project.

In total, \$2.8 million is identified as the 10% reduction share.

### **4. Post-2022 Benefit**

No post-period benefit allocation has been made to the development-related costs. The total development-related costs have been brought forward to the development-charge calculation.

## **C. CALCULATION OF RESIDENTIAL AND NON-RESIDENTIAL DISCOUNTED DEVELOPMENT-RELATED CAPITAL COSTS**

### **1. Residential and Non-Residential Allocation**

The discounted development-related costs have been allocated 66% to residential development, and 34% to the non-residential sector. This sector allocation is based upon future shares population growth in new units (241,762) and employment growth in new space (123,800).

Table 1 displays the 66% allocation to the residential sector, or \$16.4 million, and 34% to the non-residential sector, or \$8.4 million.

This page also displays the calculation of the unadjusted per capita residential charge for Development-Related Studies. The \$16.4 million in discounted development-related net capital costs are allocated to the 241,762 population forecast from new housing units, yielding a per capita charge of \$67.72 before cash flow adjustments.

The non-residential unadjusted charge per square metre is calculated by taking the \$8.4 million allocated to the non-residential sector and dividing it by 5.2 million square metres of new non-residential floor space. This yields an unadjusted charge of \$1.61 per square metre of GFA.

## **D. CASH FLOW ANALYSIS**

A cash flow analysis is also undertaken to account for the timing of projects and receipt of development charges. Interest earnings or borrowing costs are, therefore,

accounted for in the calculation as allowed under the *DCA*. Based on the development forecast, the analysis calculates the development charges rate that is required to finance the discounted development-related capital spending plan including provisions for any borrowing costs or interest earnings on the reserve funds. The cash flow analysis is designed so that the closing cash balance at the end of the planning period is as close to nil as possible.

In order to determine appropriate development charges rates reflecting borrowing and earnings necessary to support the discounted development-related funding requirement, assumptions are used for the inflation rate and interest rate. An inflation rate of 2.0% is used for the funding requirements, an interest rate of 3.5% is used for positive opening balances, and a rate of 5.5% is used for negative opening balances.

Table 2 displays the results of the cash flow analysis and provides the adjusted or final per capita residential and per square metre (of GFA) non-residential development charges. After cash flow consideration, the residential calculated charge increases slightly to \$71.16 per capita. The non-residential charge after cash flow increases slightly to \$1.74 per square metre of GFA.

The following table summarizes the calculation of the Development-Related Studies Services development charge.

| <b>DEVELOPMENT-RELATED STUDIES SUMMARY</b> |                    |                    |         |                    |               |

## APPENDIX B.14

### CIVIC IMPROVEMENTS TECHNICAL APPENDIX

This appendix for Civic Improvements provides a brief outline of the 2013–2022 development-related capital program, the calculation of the "unadjusted" development charge, and the calculated charge after cash flow considerations. The cost, quantum and timing of the projects identified in the program have been provided by City staff and are based upon the Council-approved capital budget, and previous DC Background Studies. Consistent with s. 5 (1) 7 of the *DCA*, the eligible development-related net capital cost for the provision of Development-Related Studies is reduced by 10% in calculating the development charges.

The following discusses the individual components included in the Development-Related Studies category. The analysis is set out in the tables which follow. The tables include:

Table 1        2013–2022 Development-Related Capital Program and Calculation of the Discounted Growth-Related Net Capital Costs

Table 2        Cash Flow Analysis

#### **A. HISTORIC SERVICE LEVELS AND CALCULATION OF 10-YEAR AVERAGE SERVICE LEVELS AND MAXIMUM ALLOWABLE CHARGES**

The City's capital budget has included a provision for Civic Improvements for longer than ten years. From 2003 to 2012, the average amount the City has investment in this program was roughly \$3.4 million per year.

The proposed capital program is below this 10-year average and as such, is within the City's historical service levels for Civic Improvements.

## **B. DEVELOPMENT-RELATED CAPITAL PROGRAM**

The City has reviewed its 10-year capital budget to identify which projects will result, in whole or in part, in increased capacity to meet the servicing needs of new development. The 2013–2022 development-related capital program includes an annual expenditure on “Places”, which involves the creation of special features such as plazas, fountains, gardens and interpretive displays. The timing of “Places” projects are closely linked with the Transportation Services’ road improvements, however the capital costs do not overlapped.

In the 2013 Council-approved capital budget, there is an average expenditure of roughly \$2.8 million annually on these types of projects for a 10-year total of \$27.8 million.

## **C. CALCULATION OF DISCOUNTED DEVELOPMENT-RELATED CAPITAL COSTS**

### **1. Grants, Subsidies and Other Recoveries**

No grants, subsidies or other recoveries have been identified to fund any of the development-related projects to be recovered through development charges. As such, no deductions have been made in this regard.

### **2. Replacement and Benefit to Existing Shares**

The Civic Improvement projects are done on a City-wide basis and will confer some benefit to existing residents. A reduction of 15%, a share which has been carried forward from the previous DC Background Study, has been made to the net costs of the projects.

In total, \$4.2 million is identified as the replacement and benefit to existing share.

### **3. Legislated 10% Reduction**

As this service is not identified in Section 5 (5) of the DCA, a ten% reduction to the net costs, less the replacement/benefit to existing shares, is made to each project.

In total, \$2.4 million is identified as the 10% reduction share.

#### **4. Post-2022 Benefit**

No post-period benefit allocation has been made to the development-related costs. The total development-related costs have been brought forward to the development-charge calculation.

### **D. CALCULATION OF RESIDENTIAL AND NON-RESIDENTIAL DISCOUNTED DEVELOPMENT-RELATED CAPITAL COSTS**

#### **1. Residential and Non-Residential Allocation**

The discounted development-related costs have been allocated 66% to residential development, and 34% to the non-residential sector. This sector allocation is based upon future shares population growth in new units (241,762) and employment growth in new space (123,800).

Table 1 displays the 66% allocation to the residential sector, or \$14.1 million, and 34% to the non-residential sector, or \$7.2 million.

This page also displays the calculation of the unadjusted per capita residential charge for Civic Improvements. The \$14.1 million in discounted development-related net capital costs are allocated to the 241,762 population forecast from new housing units, yielding a per capita charge of \$58.23 before cash flow adjustments.

The non-residential unadjusted charge per square metre is calculated by taking the \$7.2 million allocated to the non-residential sector and dividing it by 5.2 million square metres of new non-residential floor space. This yields an unadjusted charge of \$1.39 per square metre of GFA.

### **E. CASH FLOW ANALYSIS**

A cash flow analysis is also undertaken to account for the timing of projects and receipt of development charges. Interest earnings or borrowing costs are, therefore, accounted for in the calculation as allowed under the *DCA*. Based on the development forecast, the analysis calculates the development charges rate that is required to finance the discounted development-related capital spending plan including provisions for any borrowing costs or interest earnings on the reserve funds. The cash flow analysis is designed so that the closing cash balance at the end of the planning period is as close to nil as possible.

In order to determine appropriate development charges rates reflecting borrowing and earnings necessary to support the discounted development-related funding requirement, assumptions are used for the inflation rate and interest rate. An inflation rate of 2.0% is used for the funding requirements, an interest rate of 3.5% is used for positive opening balances, and a rate of 5.5% is used for negative opening balances.

Table 2 displays the results of the cash flow analysis and provides the adjusted or final per capita residential and per square metre (of GFA) non-residential development charges. After cash flow consideration, the residential calculated charge decreases slightly to \$57.65 per capita. The non-residential charge after cash flow remains at \$1.39 per square metre of GFA.

The following table summarizes the calculation of the Civic Improvements development charge.

| <b>CIVIC IMPROVEMENTS SUMMARY</b>   |                    |                    |         |                    |               |

***CHILD CARE***

***APPENDIX***

## APPENDIX B.15

### CHILD CARE TECHNICAL APPENDIX

This appendix provides a brief outline of historic service levels for Child Care Services, the 2013–2022 development-related capital program, the calculation of the "unadjusted" development charge, and the calculated charge after cash flow considerations. The cost, quantum and timing of the projects identified in the program have been provided by City staff and are based upon the previous DC Background Studies, and other long-range planning documents. The portion of the development-related capital program included in the calculation of the development charge is the lesser of that identified in the capital program and that which would be generated by the application of the average level of service provided over the past 10 years. Consistent with s. 5 (1) 7 of the *DCA*, the eligible development-related net capital cost for the provision of Child Care Services is reduced by 10% in calculating the development charges.

The following discusses the individual components included in the Child Care service category. The analysis is set out in the tables which follow. The tables include:

|         |  |
|---------|--|
| Table 1 | Historic Service Levels and Calculation of 10-Year Average Service Level   |
| Table 2 | 2013–2022 Development-Related Capital Program and Calculation of the Discounted Growth-Related Net Capital Costs |
| Table 3 | Cash Flow Analysis   |

#### **A. HISTORIC SERVICE LEVELS AND CALCULATION OF 10-YEAR AVERAGE SERVICE LEVELS AND MAXIMUM ALLOWABLE CHARGES**

Child Care services are provided through three types of facilities: directly operated (group), directly operated (home), and purchased space. In total, the City offered 24,000 Child Care spaces valued at \$1.55 billion. The replacement value used for a

child care space is based upon the average cost of building a child care centre in 2012.

The last page of Table 1 provides a summary of the level of service and the calculation of the ten-year historic service level. Also shown on this page is the calculation of the maximum allowable funding envelope, which is summarized as follows:

| <b>10-Year Funding Envelope Calculation</b>          |                      |
|--|----------------------|
| 10-Year Average Service Level (2003 – 2012)          | \$379.71             |
| Net Population & Employment Growth (2013 – 2022)     | 336,284              |
| Maximum Allowable Funding Envelope                   | \$238,690,398        |
| Less: 10% Legislated Reduction                       | \$12,769,040         |
| <b>Discounted Maximum Allowable Funding Envelope</b> | <b>\$114,921,358</b> |

The existing facilities have been examined and consideration has been made with regard to whether or not “excess capacity” exists within the City’s infrastructure that may be available to partially meet the future servicing requirements. It has been determined that no “uncommitted excess capacity” exists within the City’s Child Care infrastructure, and as such, no adjustments have been made to the service level calculations.

## **B. THE DEVELOPMENT-RELATED CAPITAL PROGRAM**

The 2013–2022 development-related capital program includes a provision for eleven new child care centres across the City. The first four child care centres are contained in the City’s capital budget, but their specific locations are yet to be determined. There are plans for 2 new child care centres in the West Don Lands area as mentioned in the Precinct Plan, one in East Bay Front as per the Port Lands Acceleration Initiative, two in the York University area as outlined in the Implementation Strategy, and finally two in the Lawrence-Allen neighbourhood as noted in the Secondary Plan.

In total, the capital program amounts to \$43.4 million. This is solely the City's share of the cost of the projects.

Paragraph 5 of s.s.5(1) of the *DCA* requires a deduction from the increase in the need for service attributable to the anticipated development that can be met using the City's "excess capacity," other than excess capacity which is "committed". "Excess capacity" is undefined in the *DCA*, but in this case must be able to meet some or all of the increase in need for service, in order to potentially represent a deduction. The deduction of uncommitted excess capacity from the future increase in the need for service, would normally occur as part of the conceptual planning and feasibility work associated with justifying and sizing new facilities. It is proposed that no actual "surplus" that exists within Child Care Services.

## **C. CALCULATION OF DISCOUNTED DEVELOPMENT-RELATED CAPITAL COSTS**

### **1. Grants, Subsidies and Other Recoveries**

No additional subsidies or other recoveries are anticipated for Child Care. The City receives Federal and Provincial grants to fund these programs, however the costs included in the DC Study are net of these upper-level grants.

### **2. Replacement and Benefit to Existing Shares**

The proposed new child care centres included in the DC capital program will not be replacing any existing facility, and will create additional child care spaces. As such, no replacement or benefit to existing shares have been identified in this service.

### **3. Legislated 10% Reduction**

As this service is not identified in Section 5 (5) of the *DCA*, a 10% reduction to the net municipal costs, less the replacement/benefit to existing shares, is made to each project.

In total, \$4.3 million is identified as the 10% reduction share.

### **4. Post-2022 Benefit**

The total development related costs of the Child Care capital program - \$39.1 million - is within the net funding envelope of \$114.9 million. As such, the entire

development related costs are eligible for recovery in the 10-year planning period of 2013 to 2022. No costs are deemed to be of post-period benefit.

#### **D. CALCULATION OF RESIDENTIAL AND NON-RESIDENTIAL DISCOUNTED DEVELOPMENT-RELATED CAPITAL COSTS**

##### **1. Residential and Non-Residential Allocation**

The discounted development-related costs have been allocated 66% to residential development, and 34% to the non-residential sector. This sector allocation is based upon future shares population growth in new units (241,762) and employment growth in new space (123,800).

Table 1 displays the 66% allocation to the residential sector, or \$25.8 million, and 34% to the non-residential sector, or \$13.2 million.

This page also displays the calculation of the unadjusted per capita residential charge for Child Care. The \$25.8 million in discounted development-related net capital costs are allocated to the 241,762 population forecast from new housing units, yielding a per capita charge of \$106.85 before cash flow adjustments.

The non-residential unadjusted charge per square metre is calculated by taking the \$13.2 million allocated to the non-residential sector and dividing it by 5.2 million square metres of new non-residential floor space. This yields an unadjusted charge of \$2.54 per square metre of GFA.

#### **E. CASH FLOW ANALYSIS**

A cash flow analysis is also undertaken to account for the timing of projects and receipt of development charges. Interest earnings or borrowing costs are, therefore, accounted for in the calculation as allowed under the *DCA*. Based on the development forecast, the analysis calculates the development charges rate that is required to finance the discounted development-related capital spending plan including provisions for any borrowing costs or interest earnings on the reserve funds. The cash flow analysis is designed so that the closing cash balance at the end of the planning period is as close to nil as possible.

In order to determine appropriate development charges rates reflecting borrowing and earnings necessary to support the discounted development-related funding

requirement, assumptions are used for the inflation rate and interest rate. An inflation rate of 2.0% is used for the funding requirements, an interest rate of 3.5% is used for positive opening balances, and a rate of 5.5% is used for negative opening balances.

Table 3 displays the results of the cash flow analysis and provides the adjusted or final per capita residential and per square metre (of GFA) non-residential development charges. After cash flow consideration, the residential calculated charge decreases slightly to \$101.59 per capita. The non-residential charge after cash flow increases slightly to \$2.44 per square metre of GFA.

The following table summarizes the calculation of the Child Care Services development charge.

| <b>CHILD CARE SUMMARY</b>                       |  |                    |                                  |         |                                |               |

***APPENDIX***

## APPENDIX B.16

### HEALTH TECHNICAL APPENDIX

This appendix provides a brief outline of historic service levels for Toronto Public Health (TPH), the 2013–2022 development-related capital program, the calculation of the "unadjusted" development charge, and the calculated charge after cash flow considerations. The cost, quantum and timing of the projects identified in the program have been provided by City staff and are based upon the Council-approved capital budget, previous DC Background Studies, and other long-range planning documents. The portion of the development-related capital program included in the calculation of the development charge is the lesser of that identified in the capital program and that which would be generated by the application of the average level of service provided over the past 10 years. Consistent with s. 5 (1) 7 of the *DCA*, the eligible development-related net capital cost for the provision of Health Services is reduced by 10% in calculating the development charges.

The following discusses the individual components included in the Health service category. The analysis is set out in the tables which follow. The tables include:

|         |  |
|---------|--|
| Table 1 | Historic Service Levels and Calculation of 10-Year Average Service Level   |
| Table 2 | 2013–2022 Development-Related Capital Program and Calculation of the Discounted Growth-Related Net Capital Costs |
| Table 3 | Cash Flow Analysis   |

#### **A. HISTORIC SERVICE LEVELS AND CALCULATION OF 10-YEAR AVERAGE SERVICE LEVELS AND MAXIMUM ALLOWABLE CHARGES**

Toronto Public Health offers an array of services that include dental clinics, sexual health clinics, and other types of clinics (i.e. - methadone, breastfeeding clinics). In total, the buildings that are used by TPH amount to 379,088 square feet and is

valued at \$109.9 million. The replacement cost of \$290 per square foot includes the building itself, associated land, and fixtures, furniture and equipment.

The last page of Table 1 provides a summary of the level of service and the calculation of the ten-year historic service level. Also shown on this page is the calculation of the maximum allowable funding envelope, which is summarized as follows:

| <b>10-Year Funding Envelope Calculation</b>          |                    |
|--|--------------------|
| 10-Year Average Service Level (2003 – 2012)          | \$26.37            |
| Net Population & Employment Growth (2013 – 2022)     | 336,284            |
| Maximum Allowable Funding Envelope                   | \$8,867,809        |
| Less: 10% Legislated Reduction                       | \$886,781          |
| <b>Discounted Maximum Allowable Funding Envelope</b> | <b>\$7,981,028</b> |

The existing facilities have been examined and consideration has been made with regard to whether or not “excess capacity” exists within the City’s infrastructure that may be available to partially meet the future servicing requirements. It has been determined that no “uncommitted excess capacity” exists within the TPH infrastructure, and as such, no adjustments have been made to the service level calculations.

## **B. DEVELOPMENT-RELATED CAPITAL PROGRAM**

The City has reviewed its ten-year capital budget and other long range planning documents to identify which projects that will result, in whole or in part, in increased capacity to meet the servicing needs of new development. The 2013–2022 development-related capital program includes the construction of one new sexual health clinic, and two equipment items. The Healthy Families/Healthy Living Systems Integration project will create a single record that contains a complete history of client information, and will increase the servicing capacity of TPH staff members. The HF/HL Point of Care System will expand program capacity and allow TPH to better meet Provincial standards by enabling staff to spend a greater proportion of each work day engaged in professional program and service delivery.

In total, the TPH DC capital program amounts to \$11.8 million.

Paragraph 5 of s.s.5(1) of the *DCA* requires a deduction from the increase in the need for service attributable to the anticipated development that can be met using the City's "excess capacity," other than excess capacity which is "committed". "Excess capacity" is undefined in the *DCA*, but in this case must be able to meet some or all of the increase in need for service, in order to potentially represent a deduction. The deduction of uncommitted excess capacity from the future increase in the need for service, would normally occur as part of the conceptual planning and feasibility work associated with justifying and sizing new facilities. It is proposed that there is no actual "surplus" that exists within Health Services.

### **C. CALCULATION OF DISCOUNTED DEVELOPMENT-RELATED CAPITAL COSTS**

#### **1. Grants, Subsidies and Other Recoveries**

No grants, subsidies or other recoveries have been identified to fund any of the development-related projects to be recovered through development charges. As such, no deductions have been made in this regard.

#### **2. Replacement and Benefit to Existing Shares**

The replacement and benefit to existing shares have been examined on a project-by-project basis and the nature of each project determined the rationale for the reductions. Generally speaking, shares have been deducted from the net cost of projects that account for portions of the project that relate to state of good repair or the replacement or reconstruction of existing facilities.

The new sexual health clinic will not be replacing any portion of an existing clinic, but will be an addition to the current number of clinics in the City. As such, no deduction has been made to this project to account for a replacement or benefit to existing share.

As for the Equipment acquisitions, the portion related to the cost of the "current" system or asset that will be replaced, is deemed to be the benefit to existing share.

In total, \$5.7 million is identified as the replacement and benefit to existing share.

### **3. Legislated 10% Reduction**

As this service is not identified in Section 5 (5) of the DCA, a 10% reduction to the net municipal costs, less the replacement/benefit to existing shares, is made to each project.

In total, \$613,200 is identified as the 10% reduction share.

### **4. Post-2022 Benefit**

The total development related costs of the Health Services capital program, \$5.5 million, is within the net funding envelope of \$8.0 million. As such, the entire development related costs are eligible for recovery in the ten-year planning period of 2013 to 2022 of the new DC by-law. No costs are deemed to be of post period benefit.

## **D. CALCULATION OF RESIDENTIAL AND NON-RESIDENTIAL DISCOUNTED DEVELOPMENT-RELATED CAPITAL COSTS**

### **1. Residential and Non-Residential Allocation**

The discounted development-related costs have been allocated 66% to residential development, and 34% to the non-residential sector. This sector allocation is based upon future shares population growth in new units (241,762) and employment growth in new space (123,800).

Table 2 displays the 66% allocation to the residential sector, or \$3.6 million, and 34% to the non-residential sector, or \$1.9 million.

This page also displays the calculation of the unadjusted per capita residential charge for Health Services. The \$3.6 million in discounted development-related net capital costs are allocated to the 241,762 population forecast from new housing units, yielding a per capita charge of \$15.10 before cash flow adjustments.

The non-residential unadjusted charge per square metre is calculated by taking the \$1.9 million allocated to the non-residential sector and dividing it by 5.2 million square metres of new non-residential floor space. This yields an unadjusted charge of \$0.36 per square metre of GFA.

## E. CASH FLOW ANALYSIS

A cash flow analysis is also undertaken to account for the timing of projects and receipt of development charges. Interest earnings or borrowing costs are, therefore, accounted for in the calculation as allowed under the *DCA*. Based on the development forecast, the analysis calculates the development charges rate that is required to finance the discounted development-related capital spending plan including provisions for any borrowing costs or interest earnings on the reserve funds. The cash flow analysis is designed so that the closing cash balance at the end of the planning period is as close to nil as possible.

In order to determine appropriate development charges rates reflecting borrowing and earnings necessary to support the discounted development-related funding requirement, assumptions are used for the inflation rate and interest rate. An inflation rate of 2.0% is used for the funding requirements, an interest rate of 3.5% is used for positive opening balances, and a rate of 5.5% is used for negative opening balances.

Table 3 displays the results of the cash flow analysis and provides the adjusted or final per capita residential and per square metre (of GFA) non-residential development charges. After cash flow consideration, the residential calculated charge increases slightly to \$15.98 per capita. The non-residential charge after cash flow increases slightly to \$0.39 per square metre of GFA.

The following table summarizes the calculation of the Health Services development charge.

| <b>HEALTH SUMMARY</b>                           |  |                    |                                  |         |                                |               |

***APPENDIX***

## APPENDIX B.17

### PEDESTRIAN INFRASTRUCTURE TECHNICAL APPENDIX

This appendix for Pedestrian Infrastructure provides a brief outline of the 2013–2022 development-related capital program, the calculation of the "unadjusted" development charge, and the calculated charge after cash flow considerations. The cost, quantum and timing of the projects identified in the program have been provided by City staff and are based upon the Council-approved capital budget, and previous DC Background Studies. Consistent with s. 5 (1) 7 of the *DCA*, the eligible development-related net capital cost for the provision of Pedestrian Infrastructure is reduced by 10% in calculating the development charges.

The following discusses the individual components included in the Pedestrian Infrastructure category. The analysis is set out in the tables which follow. The tables include:

Table 1        2013–2022 Development-Related Capital Program and Calculation of the Discounted Growth-Related Net Capital Costs

Table 2        Cash Flow Analysis

#### **A. HISTORIC SERVICE LEVELS AND CALCULATION OF 10-YEAR AVERAGE SERVICE LEVELS AND MAXIMUM ALLOWABLE CHARGES**

The City has previously coordinated the provision of approximately 27 km of PATH links in the downtown core. The City had 26.6 km in 1998 and has added approx. 0.37 km in the intervening decade. The subject connection is approximately 230 m in length (a PATH expansion of approximately 1 %) and is therefore well within the City's 10-year level of service for such pedestrian connections.

#### **B. DEVELOPMENT-RELATED CAPITAL PROGRAM**

The City has reviewed its 10-year capital budget to identify which projects will result, in whole or in part, in increased capacity to meet the servicing needs of new

development. The 2013–2022 development-related capital program solely recovers for the Northwest PATH project. Union Station's revitalization will result in new pedestrian connections, including a new underground Northwest PATH tunnel that will connect Union Station to the existing PATH system in the Wellington Street area. The Northwest PATH is expected to relieve pedestrian congestion in the PATH system, while supporting future downtown growth and pedestrian activities.

The cost of the Northwest PATH has increased since the release of the previous DC Background Study. The total gross cost of the project is \$105.0 million.

### **C. CALCULATION OF DISCOUNTED DEVELOPMENT-RELATED CAPITAL COSTS**

#### **1. Grants, Subsidies and Other Recoveries**

The reduction to the total gross cost of the Northwest PATH all come from upper-tier grants; both from the Provincial and the Federal Government.

In total, \$33.05 million in grants have been identified and applied to the DC capital program.

#### **2. Replacement and Benefit to Existing Shares**

A reduction of 55%, a share which has been carried forward from the previous DC Background Study, has been made to the net cost of the project.

In total, \$39.6 million is identified as the replacement and benefit to existing share.

#### **3. Legislated 10% Reduction**

As this service is not identified in Section 5 (5) of the *DCA*, a ten% reduction to the net costs, less the replacement/benefit to existing shares, is made to each project.

In total, \$3.2 million is identified as the 10% reduction share.

#### **4. Post-2022 Benefit**

A post-period benefit allocation has been made to recognize that this project is in part, pre-built to service future population and employment growth. A deduction of 29%, a share which has been carried forward from the previous DC Background Study, has been made to the total development-related cost of the project.

In total, \$8.5 million is identified as the post-period benefit share.

#### **D. CALCULATION OF RESIDENTIAL AND NON-RESIDENTIAL DISCOUNTED DEVELOPMENT-RELATED CAPITAL COSTS**

##### **1. Residential and Non-Residential Allocation**

The discounted development-related costs have been allocated 20% to residential development, and 80% to the non-residential sector. This sector allocation is based upon the residential to non-residential split used in the previous DC Study.

Table 1 displays the 20% allocation to the residential sector, or \$4.1 million, and 80% to the non-residential sector, or \$16.5 million.

This page also displays the calculation of the unadjusted per capita residential charge for Northwest PATH. The \$4.1 million in discounted development-related net capital costs are allocated to the 241,762 population forecast from new housing units, yielding a per capita charge of \$17.07 before cash flow adjustments.

The non-residential unadjusted charge per square metre is calculated by taking the \$16.5 million allocated to the non-residential sector and dividing it by 5.2 million square metres of new non-residential floor space. This yields an unadjusted charge of \$3.17 per square metre of GFA.

#### **E. CASH FLOW ANALYSIS**

A cash flow analysis is also undertaken to account for the timing of projects and receipt of development charges. Interest earnings or borrowing costs are, therefore, accounted for in the calculation as allowed under the *DCA*. Based on the development forecast, the analysis calculates the development charges rate that is required to finance the discounted development-related capital spending plan including provisions for any borrowing costs or interest earnings on the reserve funds. The cash flow analysis is designed so that the closing cash balance at the end of the planning period is as close to nil as possible.

In order to determine appropriate development charges rates reflecting borrowing and earnings necessary to support the discounted development-related funding requirement, assumptions are used for the inflation rate and interest rate. An inflation rate of 2.0% is used for the funding requirements, an interest rate of 3.5% is

used for positive opening balances, and a rate of 5.5% is used for negative opening balances.

Table 2 displays the results of the cash flow analysis and provides the adjusted or final per capita residential and per square metre (of GFA) non-residential development charges. After cash flow consideration, the residential calculated charge increases slightly to \$18.84 per capita. The non-residential charge after cash flow increases to \$3.58 per square metre of GFA.

The following table summarizes the calculation of the Pedestrian Infrastructure development charge.

| <b>PEDESTRIAN INFRASTRUCTURE SUMMARY</b> |                    |                    |         |                    |               |

***RESERVE FUNDS***

## APPENDIX C

### RESERVE FUNDS TECHNICAL APPENDIX

There is no explicit requirement under Section 5 of the *DCA* to net the outstanding reserve fund balance as part of setting the DC rates; however, Section 35 states the following:

“The money in a reserve fund established for a service may be spent only for the capital costs determined under paragraphs 2 to 8 of subsection 5(1).”

The City’s existing DC reserve fund balances have been considered in this background study, in a manner similar to the City’s past practices, as follows.

For engineered services, the December 31, 2012 cash balances are applied to the future capital programs. The reserve fund balances are also notionally doubled to account for the non-statutory exemptions and phase-in provisions of the City’s current in-force DC by-law. The engineered services DC reserve fund balances are noted in Table 1.

As related to the general services, which are subject to a per capita historic service level “cap”, the City’s existing DC reserve funds will be used to create new facilities and servicing capacity to maintain service levels related to prior growth. The City’s 2013 DC Background Study quantifies maximum permissible funding envelopes and servicing needs of development over the 2013–2022 planning timeframe. For the purposes of the DC study calculations, the existing reserve funds are assumed to be paying for space, and/or servicing capacity, which is in addition to this requirement and relates to development that occurred prior to the passage of the 2013 DC by-law (“prior growth”) which has paid DCs but has yet to receive new facilities. This includes a share of the monies in the existing City DC reserve funds, including collections from 2013, related to applications that have been approved and permits issued but for which construction has yet to be completed, or in some cases started. The population, household, employment and non-residential space that will arise from these applications is part of the 2013–2022 planning horizon, and hence development, that has been used in this study to establish new proposed DC rates.

**APPENDIX E**

---

***CITY OF TORONTO***

***LOCAL SERVICE POLICY & GUIDELINES***

***(DEVELOPMENT CHARGES FUNDING CRITERIA)***

## **E GENERAL POLICY GUIDELINES ON DEVELOPMENT CHARGE AND LOCAL SERVICE FUNDING FOR CITY-RELATED WORKS**

---

---

The following guidelines describe, in general terms, the size and nature of municipal infrastructure that is included in the City of Toronto Development Charges Background Study (DC Study), as a project to be eligible for funding, in whole, or in part by development charges (DCs). The following will apply:

1. The project must be listed in the most current City of Toronto DC Study.
  - a. The City, at its sole discretion, may deem a project not listed in the most current DC Study to be development-related and potentially fundable, in whole or in part, from DCs. Inclusion of the “new” project may require the substitution (removal) of a similar project or projects from the related service project list, as contained in the most current DC Study, or require consideration for future DC funding pending a DC Background Study update or amendment.
  - b. The City, at its sole discretion, may deem a project not specifically listed in the most current DC Study to be part of the “unallocated improvements” referenced in the most current DC Study. As such, the project may be considered development-related and potentially fundable, in whole or in part, from DCs.
2. If the proposed infrastructure does not add any additional capacity over and above the capacity requirement for a specific development, these projects are assumed to be the sole responsibility of the developer as they serve only the associated development site.
  - a. The City may require larger infrastructure than what may be necessitated by a given development in order to conform to standard infrastructure sizes and capacities (for example, to the next standard pipe size) as per the City’s design criteria. This is not considered “excess” capacity and will be required at the direct expense of the developer and no share of the cost will be eligible for DC credits.

The following policy guidelines are general principles by which staff will be guided in considering development application's eligibility for full or partial funding from DCs. Each application will be considered on its own merits having regard to, among other factors:

- the nature, type and location of the development within any existing plan and proposed development in its surrounding area;
- these policy guidelines;
- the location and type of services required and their relationship to the proposed development; and
- the existing and proposed development in the area, and subsection 59(2) of the *Development Charges Act, 1997* (the DCA).

These local service policy guidelines are subject to review and amendment by the City either in conjunction with or independent of any amendments or updates to the City's DC by-laws.

The detailed engineering requirements for all work and/or development applications are governed by the *City of Toronto Official Plan*, or, if not specified in the Official Plan, by the secondary or site-specific planning and associated servicing analysis, or in accordance with the *City's Design Criteria for Sewers and Watermains*.

## **A. WATER**

### **1. Water Supply, Storage and Booster Pumping Stations**

All projects related to upgrading, expanding or constructing water supply and treatment facilities (plants and water conservation), storage facilities (reservoirs, etc.), and booster pumping stations, considered to be in whole or in part related to development, are considered to be a DC project.

Land acquisitions, conveyance or dedication to the City for booster pumping stations and reservoirs, where required to provide servicing needs greater than that of a specific development, and to a size required by the design of the facility, are to be provided by the developers as part of the development approval process.

## 2. Watermains

- Watermains that are required to service a specific development, either internal or external to the site, are considered to be the developer's responsibility.
- In a situation where the City requests that a developer oversize a watermain to provide servicing capacity greater than the needs of a specific development, a portion of the project costs may be eligible for DC credits or reimbursement from other City funding sources. The value of the oversized portion of the project cost for watermains shall be calculated using lowest tendered unit prices that are established in accordance with the City's requirements and standards. If a tendered price is not available then the City's annual cost estimate used for budgeting construction will be used as an interim value, adjusted when actual costs are known. The portion that may be eligible for DC credit or reimbursement from other City funding sources shall be the difference between the cost of the watermain pipe size requested by the City and the estimated cost to install a standard size required for the development, and an additional 10% investigations, testing and engineering fee. Only material (not labour) cost of the watermain and related valve/chamber appurtenances will be included in the calculation. Any costs related to the installation of pipe are the responsibility of the developer.
- Connections to trunk mains and pumping stations to service specific areas are considered to be a direct developer responsibility.
- Transmission watermains (generally outside the development area) identified by a Class Environmental Assessment, Servicing Study or by Toronto Water staff or listed in the City's most current DC Study are considered to be a DC project.

## B. WASTEWATER

### 1. Wastewater Treatment

- All projects providing for the upgrading, improvement and/or expansion of wastewater treatment facilities considered in whole or in part to be related to development are considered to be a DC project.
- Land acquisitions, conveyance or dedication to the City for booster pumping stations and reservoirs, where required to provide servicing needs greater than that of a specific development, and to a size required by the design of the facility, is to be provided by the developers as part of the development approval process.

## 2. Sanitary Sewers

- Sanitary Sewers that are required to service a specific development, either internal or external, are considered to be the developer's responsibility.
- In a situation where the City requests that a developer oversize a sanitary sewer to provide servicing capacity greater than the needs of a specific development, a portion of the project costs may be eligible for DC credits or reimbursement from other City funding sources. The value of the oversized portion of the project cost, for a sanitary sewer shall be calculated using tendered unit prices. If a tendered price is not available then the annual cost estimate used for budgeting construction will be used as an interim value, adjusted when actual costs are known. The portion that may be eligible for DC credit or reimbursement from other City funding sources shall be the difference between the cost of the pipe diameter requested by the City and the standard pipe size required for the development, and an additional 10% investigations, testing and engineering fee if such investigations are required by the City. Only sewers and maintenance holes will be included in the calculation. Any costs related to the depth of installation of the pipe are the responsibility of the developer.
- A sanitary sewer, of any size, required to connect a major pumping station or major treatment plant to service specific areas is considered a direct developer responsibility.

## 3. Pumping Stations

- New pumping stations or expansions of the existing major pumping stations are considered to be a DC project. Major pumping stations are those required by Toronto Water, and are identified through the Class Environmental Assessment process or a Master Servicing Study. Such improvements will be listed in the City's most current DC Study.
- New or expanded local pumping stations servicing a localized area and needs (potentially one or more developments) are a local service and a direct developer responsibility under s.59 of the DCA. If a local pumping station serves multiple developments, the costs are to be shared, as a local service, on a population and population equivalent (non-residential land uses).
- Land conveyance or dedication to the City for pumping stations, where required to provide servicing needs greater than that of a specific development, and to a size required by the design of the facility, is to be provided by the developers as part of the development approval process.

## **C. STORMWATER MANAGEMENT**

### **1. Storm Sewers**

- Storm sewers that are required for a development, either internal or external, are considered to be the developer's responsibility.
- In a situation where the City requests that a developer oversize a storm sewer to provide servicing capacity greater than the needs of a specific development, a portion of the project costs may be eligible for DC credits or reimbursement from other City funding sources. The value of the oversized portion of the project cost for a storm sewer within a development shall be calculated using tendered unit prices. If a tendered price is not available, the annual cost estimate used for budgeting construction will be used as an interim value, adjusted when actual costs are known. The amount shall be the difference between the cost of the actual storm sewer requested by the City and the estimated cost to install a storm sewer of a standard size to meet the servicing requirements of the development, and an additional 10% investigations, testing and engineering fee if such investigations and testing are required by the City. Only sewers and related appurtenances will be included in the calculation. Any costs related to the installation of the pipe are the responsibility of the developer.

### **2. Stormwater Management Facilities**

- Stormwater quality and quantity works required to service a specific development, either internal or external, are a direct developer responsibility.
- Stormwater quality and quantity works outlined in the Wet Weather Flow Management Master Plan, including works recommended from subsequent Environmental Assessment for projects identified in the Wet Weather Flow Master Plan, are DC projects.

## **D. ROAD-RELATED**

### **1. Expressways, Arterial and Collector Roads (including Structures)**

- New, widened, extended or upgraded, roads internal to a development are a direct developer responsibility.
- New, widened, extended or upgraded, expressway, arterial and collector roads external to a development are considered to be DC projects, except for new roads

external to a development, but primarily acting as a connection serving a development, as they are considered a direct developer responsibility.

- All other roads are considered to be a direct developer responsibility.

## **2. Traffic Signals and Intersection Improvements**

- Traffic signals required on arterial or collector roads external to a development that are necessitated by a specific development are considered a direct developer responsibility. Other traffic signals required on arterial or collector roads due to general development growth from increasing traffic are considered to be DC projects.
- Intersection improvements and/or traffic signals required on collector roads, local roads, private site entrances or entrances related to a specific development are considered a direct developer responsibility.
- Intersection improvements and/or traffic signals on other roads due to general development growth resulting from increasing traffic are considered to be DC projects.

## **3. Boulevard Improvements**

- Boulevard improvements on all internal roads are considered to be a direct developer responsibility.
- Boulevard improvements, including sidewalks, external to a development considered necessary to connect the development to public spaces and existing sidewalks are considered to be a direct developer responsibility.
- Boulevard improvements will be considered a local service or DC project based on the categorization of the adjacent road described in D.1 above.
- Boulevard improvements proposed as part of a development project are a direct developer responsibility.

## **4. Strategic Transportation Initiatives (e.g. Congestion Management Initiatives, Signal Modifications, Bike Lanes, HOV, Bus Lanes, RESCU, ATSC)**

- Strategic transportation initiatives on arterial or collector roads external to a development that are necessitated by a specific development are considered a direct developer responsibility. Strategic transportation initiatives on

expressways, arterial or collector roads external to a development that are required due to general development growth from increasing traffic are considered to be DC projects.

- Strategic transportation initiatives internal to a development are a direct developer responsibility.

## 5. Land Acquisition for Road Works

### a. Road Allowances

- Land acquisition for expressways, arterial or collector roads, to the widths required according to the approved Official Plan or engineering standards, is primarily provided by dedications under the *Planning Act*. In areas where limited or no development is anticipated, and direct dedication is unlikely, the land acquisition is considered to be part of the capital cost of the related DC project.

### b. Grade Separations

- Land acquisition for grade separations (beyond normal dedication requirements) is considered to be part of the capital cost of the related DC project. The detailed engineering requirements of the above items are governed by the approved detailed engineering standards and specifications for the City.

## E. PARKLAND DEVELOPMENT

Developers dedicating parkland as a condition of development are required to undertake, at their sole expense, the base construction and installation of the parkland improvements (the Base Park Improvements) on lands to be conveyed to the City for park purposes. This work shall include:

- a. grading inclusive of topsoil supply and placement, minimum of 150 mm depth;
- b. sodding #1 nursery grade or equivalent value of other approved park development;
- c. fencing, where deemed necessary to the satisfaction of Parks, Forestry and Recreation;

- d. drainage systems, including connections to the municipal services as required;
- e. electrical and water connections minimum 50 mm to street line including backflow preventers, shut off valves, water and hydro chambers;
- f. street trees along all public road allowances abutting City-owned parkland;
- g. standard park sign (separate certified cheque required); and
- h. demolition, removal and disposal of all existing materials, buildings and foundations.
