---------	--------	--	--	---------

Combined Sewer Overflows Control in Humber River and Black Creek Sewersheds and Investigation of Basement Flooding in Study Areas 4 and 5 - by Councillor Frances Nunziata, seconded by Councillor Maria Augimeri

** This Motion has been deemed urgent by the Chair.*

** This Motion is not subject to a vote to waive referral.*

** This Motion has been added to the agenda and is before Council for debate.*

Recommendations

Councillor Frances Nunziata, seconded by Councillor Maria Augimeri, recommends that:

1. City Council direct the General Manager, Toronto Water to review the Class Environmental Assessment Study work schedule for Study Areas 4 and 5 and look at opportunities to advance the second public meeting.

Summary

The City of Toronto has initiated a Municipal Class Environmental Assessment (EA) Study to address water quality issues in Black Creek and Humber River due to the discharge of combined sewer overflows and to assess the causes of flooding and develop solutions to reduce the risk of future surface and basement flooding within basement flooding study areas 4 and 5.

A public meeting was held on Thursday November 1, 2012, to introduce the commencement of the Class Environmental Assessment Study for these areas. The second public meeting in which the preferred solutions will be presented is anticipated for the fall of 2013.

(Submitted to City Council on July 16 and 17, 2013 as MM37.59)
