Introduction

- What is a Mid-Rise Building
- Appropriate FSI Testing
- How Mid-Rise Heights are Determined
- Ideal Lot Conditions
- Mid-Rise Urbanism
- Where and How the Guidelines Apply
 - Land Use Designations & the Avenues
 - Character Areas
 - Heritage Conservation Properties and Districts
 - Retail Priority Corridors
 - Non-Avenues and Non-Mixed Use Locations
 - Large Sites and Irregular Lot Configurations
 - Exclusions
- Alternative Solutions and Innovations

1.0 Site Context

- 1.1 Context Analysis and the Maximum Allowable Height
- 1.2 Minimum Building Height
- 1.3 Corner Sites
 - 1.3.1 Heights & Angular Planes
- 1.4 Rear Transition to Neighbourhoods
 - 1.4.1 Ideal Properties
 - 1.4.2 Extra Deep Properties
 - 1.4.3 To Apartment Neighbourhoods
 - 1.4.4 To Employment Areas
- 1.5 Shadow Testing
- 1.6 Character Areas
 - 1.6.1 Fine grain Fabric
 - 1.6.2 Consistent Cornice Lines
 - 1.6.3 Vertical Additions
 - 1.6.4 Other Considerations
- 1.7 Heritage Properties & Heritage Conservation Districts
 - 1.7.1 Development in a Heritage Conservation District
 - 1.7.2 Development Adjacent to Heritage Properties

2.0 Site Organization

- 2.1 Front Façade Alignment
- 2.2 Side Property Line
 - 2.2.1 Step-backs at Upper Storeys
 - 2.2.2 Corner Sites
 - 2.2.3 Side Street Setbacks
- 2.3 Site Servicing, Access, and Parking
 - 2.3.1 Mid-block Vehicular Access for Constrained Sites
- 2.4 Loading and Servicing

3.0 Mid-Rise Building Design

- 3.1 Design Quality
- 3.2 Front Façade
 - 3.2.1 Angular Plane
 - 3.2.1.1 Pedestrian Perception Step-back
- 3.3 Minimum Ground Floor Height
- 3.4 At-grade Uses
 - 3.4.1 Residential
 - 3.4.2 Retail
- 3.5 Side Property Line
 - 3.5.1 Continuous Street Walls
 - 3.5.2 Limiting Blank Side Walls
- 3.6 Building Width: Maximum Width
- 3.7 Façade Design & Articulation
- 3.8 Balconies & Projections
- 3.9 Exterior Building Materials
- 3.10 Roof & Roofscapes

4.0 Pedestrian Realm

- 4.1 Minimum Sidewalk Zones
- 4.2 Streetscapes
- 4.3 Setbacks for Civic Spaces
