

THE BEST NATIVE PLANTS FOR TORONTO GARDENS

Gardening with plants native to your area has many advantages. They are adapted to the local climate and generally require less care and watering. They are also adapted to local insects and soils and don't need fertilizers and pesticides. Native plants provide seeds and berries for birds and nectar and pollen for beneficial insects, like bees and butterflies.

This list includes pollinator-friendly plants that are native to the Toronto-area. For more information about native plants and pollinator gardening, visit www.davidsuzuki.org/butterflyway.

	PLANT SPECIES	SUN EXPOSURE	Butterfly Host Plant
