Physical Production and Post-Production

Toronto’s growth is experienced in both physical and post-production.

Demand for VFX and Animation is on the rise as advances in technology and greater market demand have led to a greater need for computer-generated content integration worldwide. Recent post-production projects include *Stranger Things Season 3* and *The Haunting of Hill House*.

*VFX/Animation data is calculate with a new, more accurate methodology that is different from previous years and this not comparable year to year.

Foreign and Domestic Major Productions Investment – YoY Trend

Studios and streaming services are spending more than ever on content production to respond to market demand and streaming services’ needs for high-end and voluminous offerings. The increase in foreign investment is directly linked to this growth, all the while allowing for Canadian productions to thrive.

In 2018, the Toronto Film Permit Office issued 3287 permits for 1412 projects shot on location across the city over 6322 days of production. Lower amounts of shoot days for similar amounts of projects point to more efficient location shoots.

The growth expected in the next few years will mean an increase of these numbers per year. The Film Office is dedicated to continuing to work with City Council, residents and industry on managing this growth across the city.
