Dear Magda Ishak:

Thank you for your email June 6, 2019 8:59am concerning our project at the Main Transformer Station (TS) 165 Stephenson Ave and the demolition of the residents of 155 Stephenson Ave (19-153396).

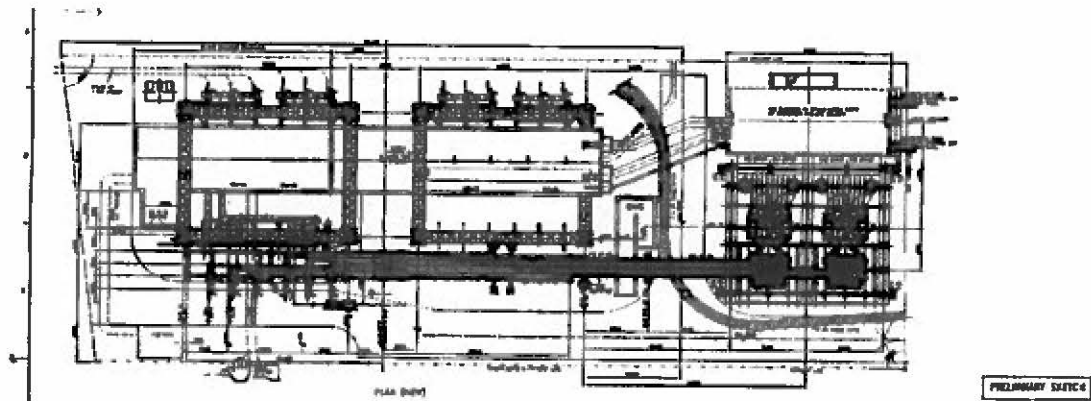

The Main TS transformers have reached "end of life" and need to be replaced. Main TS is a critical power transforming station in the Main St and Danforth Ave area and is typically highly loaded with Toronto Hydro customers. Due to this high load of local customers the transformers cannot be replaced in their present position in the station. The risk of a full station outage is too high and the resulting power outage would be significant in area affected and duration.

Hydro One has purchased 155 and 157 Stephenson Ave to facilitate the transformer replacement. The area where these two building sit will be used to construct the foundations for two new transformers and secondary cable pulling vault needed to facilitate the replacement of the old transformers. This method will greatly reduce the risk of an unplanned significant outage in the area.
