

# **Response to COVID-19: Update on Resurgence Presentation to the Board of Health**

**Dr. Eileen de Villa  
Medical Officer of Health  
Toronto Public Health**

**October 19, 2020**

## SUMMARY OF COVID-19 CASES IN TORONTO

All Cases

Case Count*	24,624
Recovered Cases	20,803
City Incidence Rate per 100,000 People	901
Fatal Cases	1,337
Ever Hospitalized	2,294
Ever in ICU	472

Currently Hospitalized	107
Currently in ICU	26

As of October 18, 2020

CASES IN THE COMMUNITY	72%
Recovered Cases	15,248
Median Age At Time of Illness	43
Percent Female	48%
Percent Male	51%
Fatal Cases	278
Median Age of Deaths	74

OB ASSOCIATED CASES**	28%
Recovered Cases	5,555
Median Age At Time of Illness	59
Percent Female	62%
Percent Male	36%
Fatal Cases	1,059
Median Age of Deaths	88

\*Includes confirmed and probable cases

\*\*Outbreak associated cases include persons with COVID-19 within a defined group or setting. These are generally in healthcare (e.g., long-term care homes, hospitals) and residential or congregate settings (e.g., homeless shelters, group homes), but can also be in workplaces and other settings

<sup>†</sup>Gender was unknown or other for some cases

# Epidemic curve of COVID-19 cases: Outbreak vs sporadic cases, Toronto

\*Interpret case reports for the recent 2 weeks with caution due to reporting delays.  
**Data sources:** Ontario Ministry of Health, Integrated Public Health Information System (iPHIS), Toronto Public Health, Coronavirus Rapid Entry System (CORES),  
 extracted October 17, 2020 (2PM).

# COVID-19 cases by age group: Initial wave compared to resurgence period, Toronto

# COVID-19 cases: Children compared to adults, Toronto

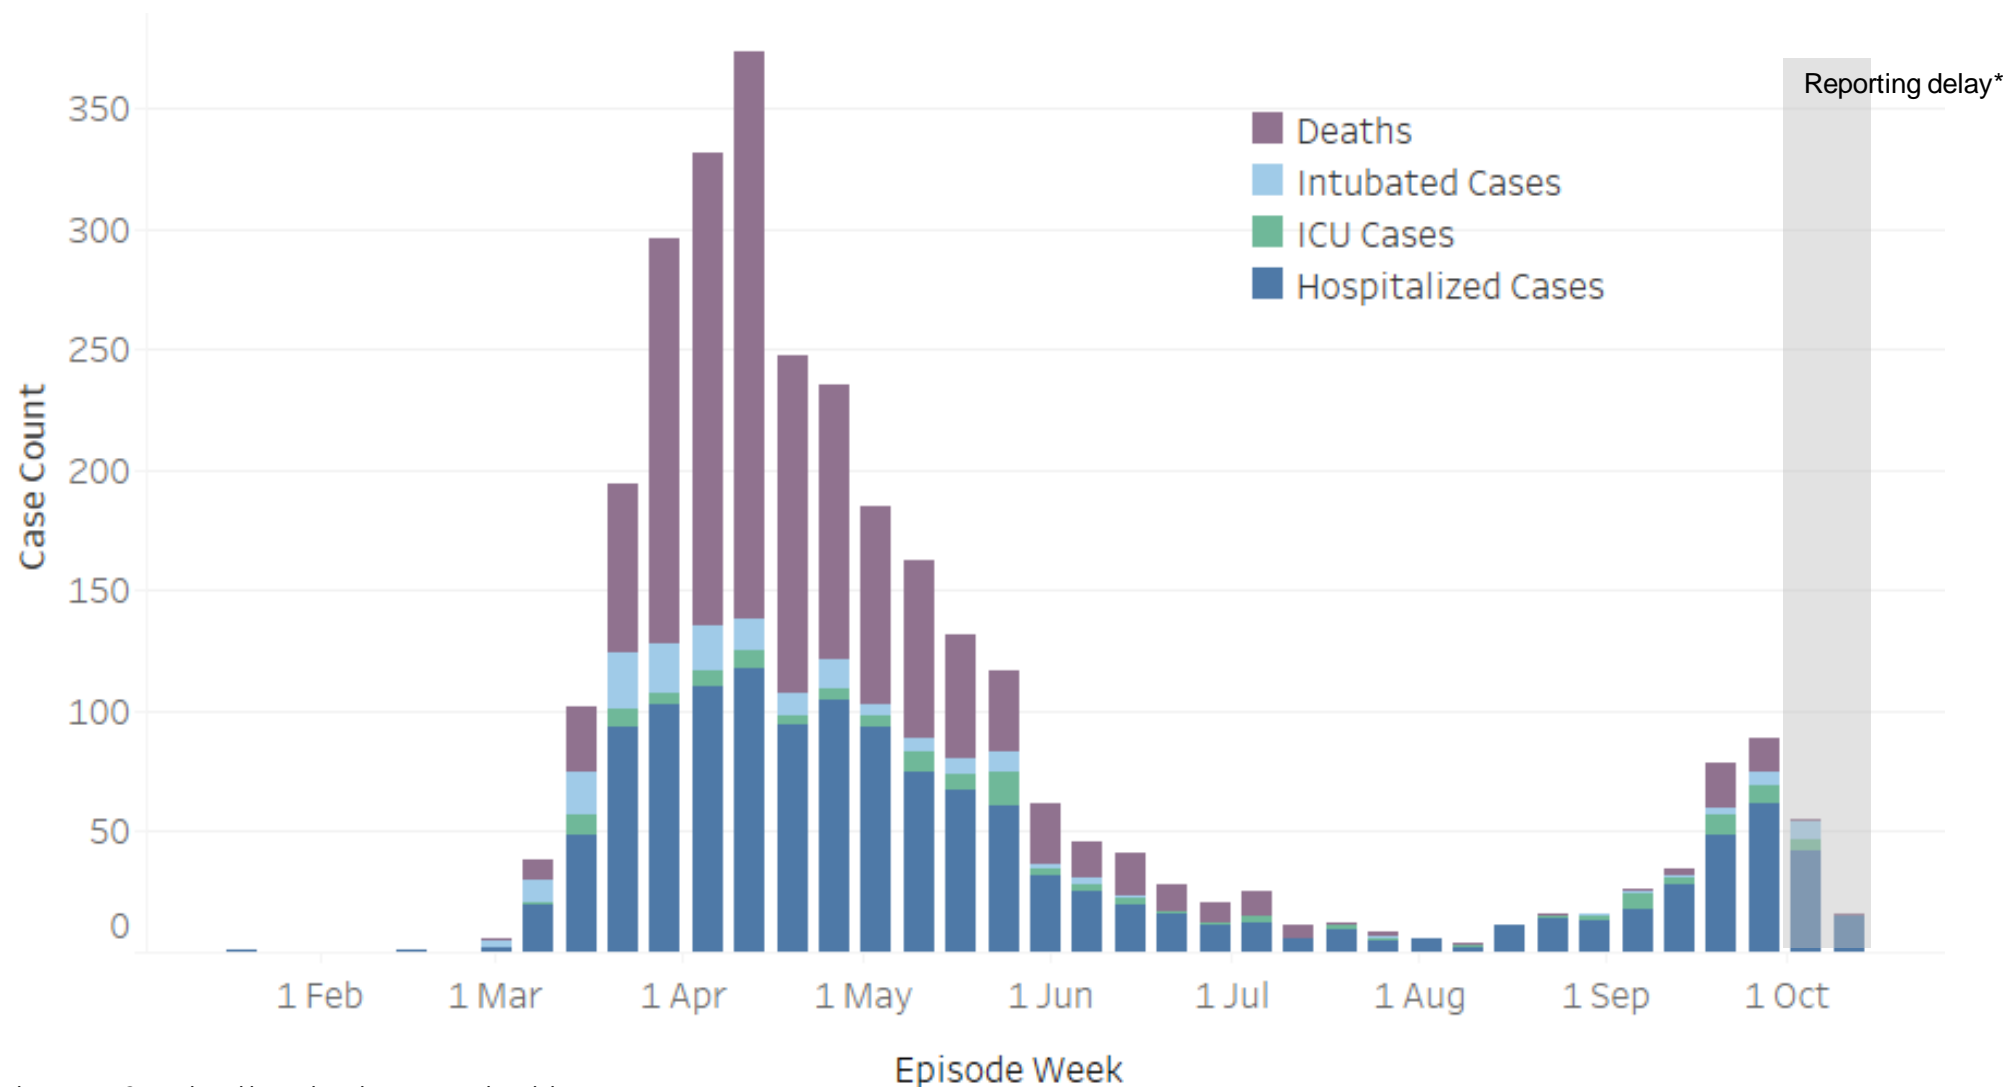

\*Interpret case reports for the recent 2 weeks with caution due to reporting delays.

\*\*Refers to first day of episode week.

**Data sources:** Ontario Ministry of Health, Integrated Public Health Information System (iPHIS), Toronto Public Health, Coronavirus Rapid Entry System (CORES), extracted October 13, 2020 (2PM).

# Epidemic curve of COVID-19 cases with severe illness, Toronto

\*Interpret case reports for the recent 2 weeks with caution due to reporting delays.

**Data sources:** Ontario Ministry of Health, Integrated Public Health Information System (iPHIS), Toronto Public Health, Coronavirus Rapid Entry System (CORES), extracted October 17, 2020 (2PM).

# COVID-19 outbreaks by setting, Toronto

# COVID-19 effective reproductive number estimates, Toronto

# Simulated COVID-19 infections at $R_t$ of 1.1 on Oct 26, 2020, followed by subsequent reductions to $R_t$ of 1.0 and 0.9, Toronto

# Complementary data to inform COVID-19 response

- Launching **Online Survey** of Behaviours and Beliefs tied to pandemic
- Initiating work on **Case-control study** to confirm association between activities/venues and significant risk of infection
- Analyzing anonymous **Mobility indicators** to better understand impacts of PH measures

# Update on percent positivity

# Percent positivity for COVID-19

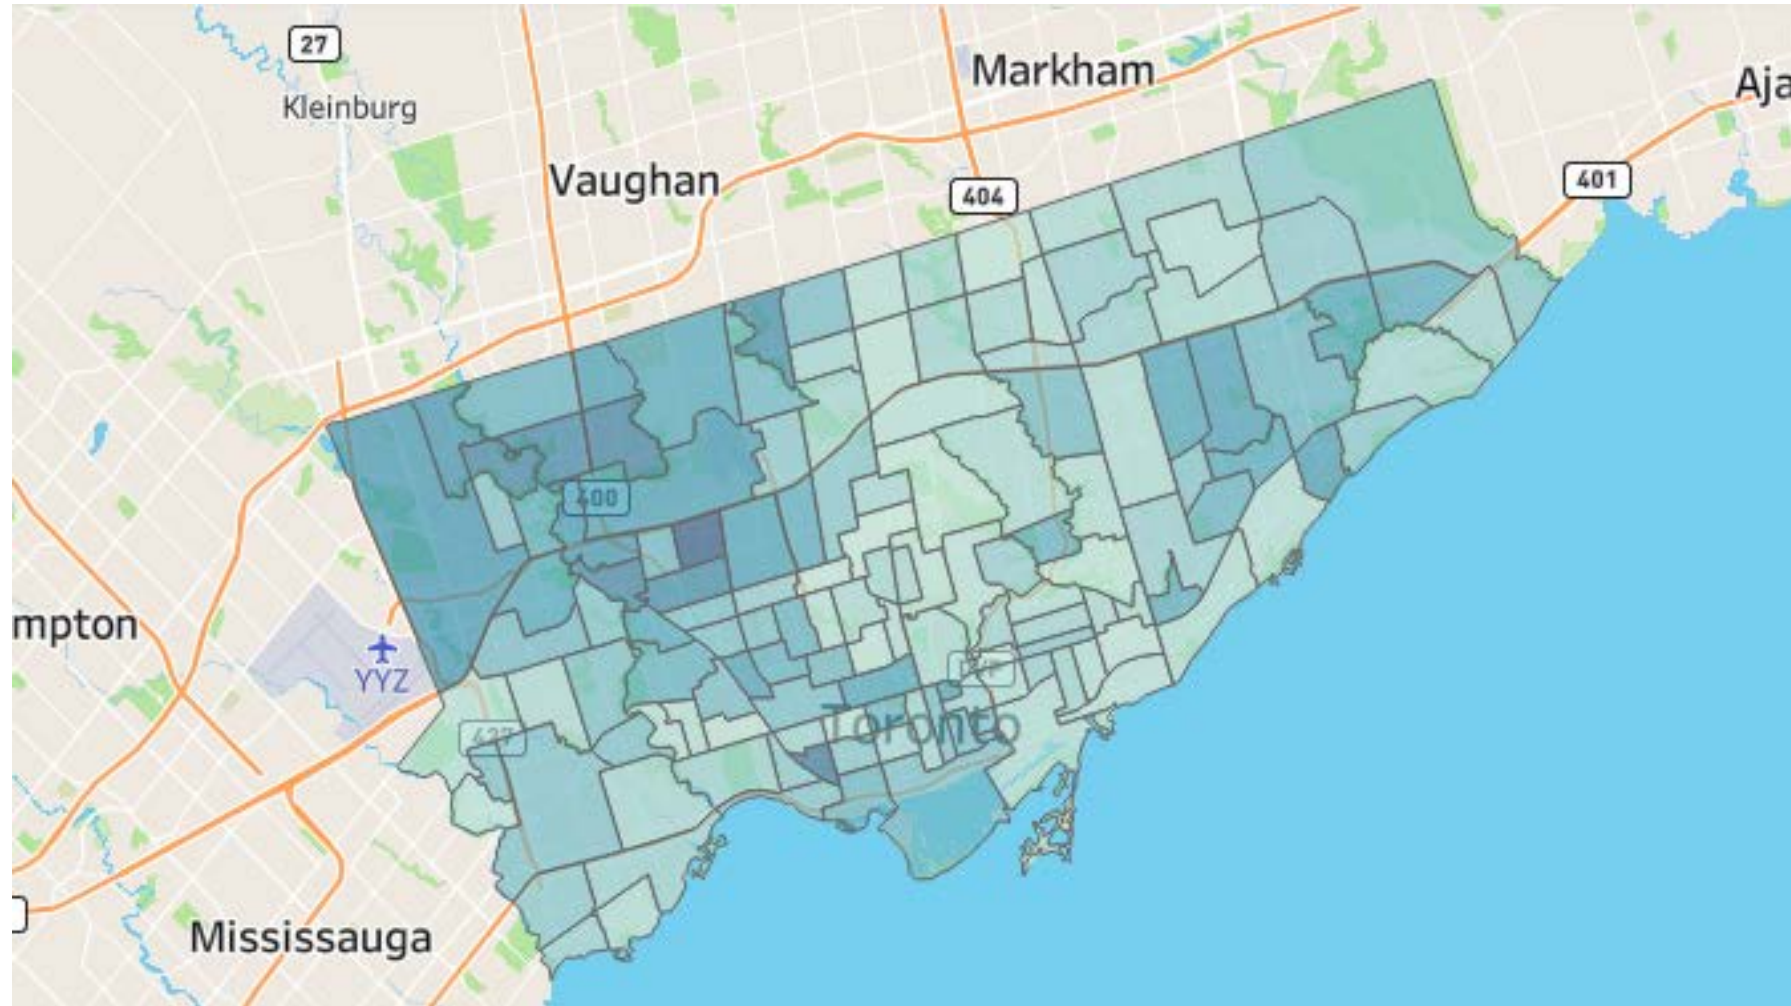

- Percent positivity measures the proportion of individuals testing positive out of the total number who were tested
- Percent positivity is most meaningful when combined with other COVID indicators such as case counts/rates and testing rates.
- In combination with a low testing rate, a high % positivity may signal insufficient testing and/or limited availability of testing.
- An area with high case rates, high percent positivity, and high testing rates suggests a high degree of virus transmission.

# Toronto COVID-19 percent positivity

We have been sharing the overall Toronto percent positivity on our monitoring dashboard.

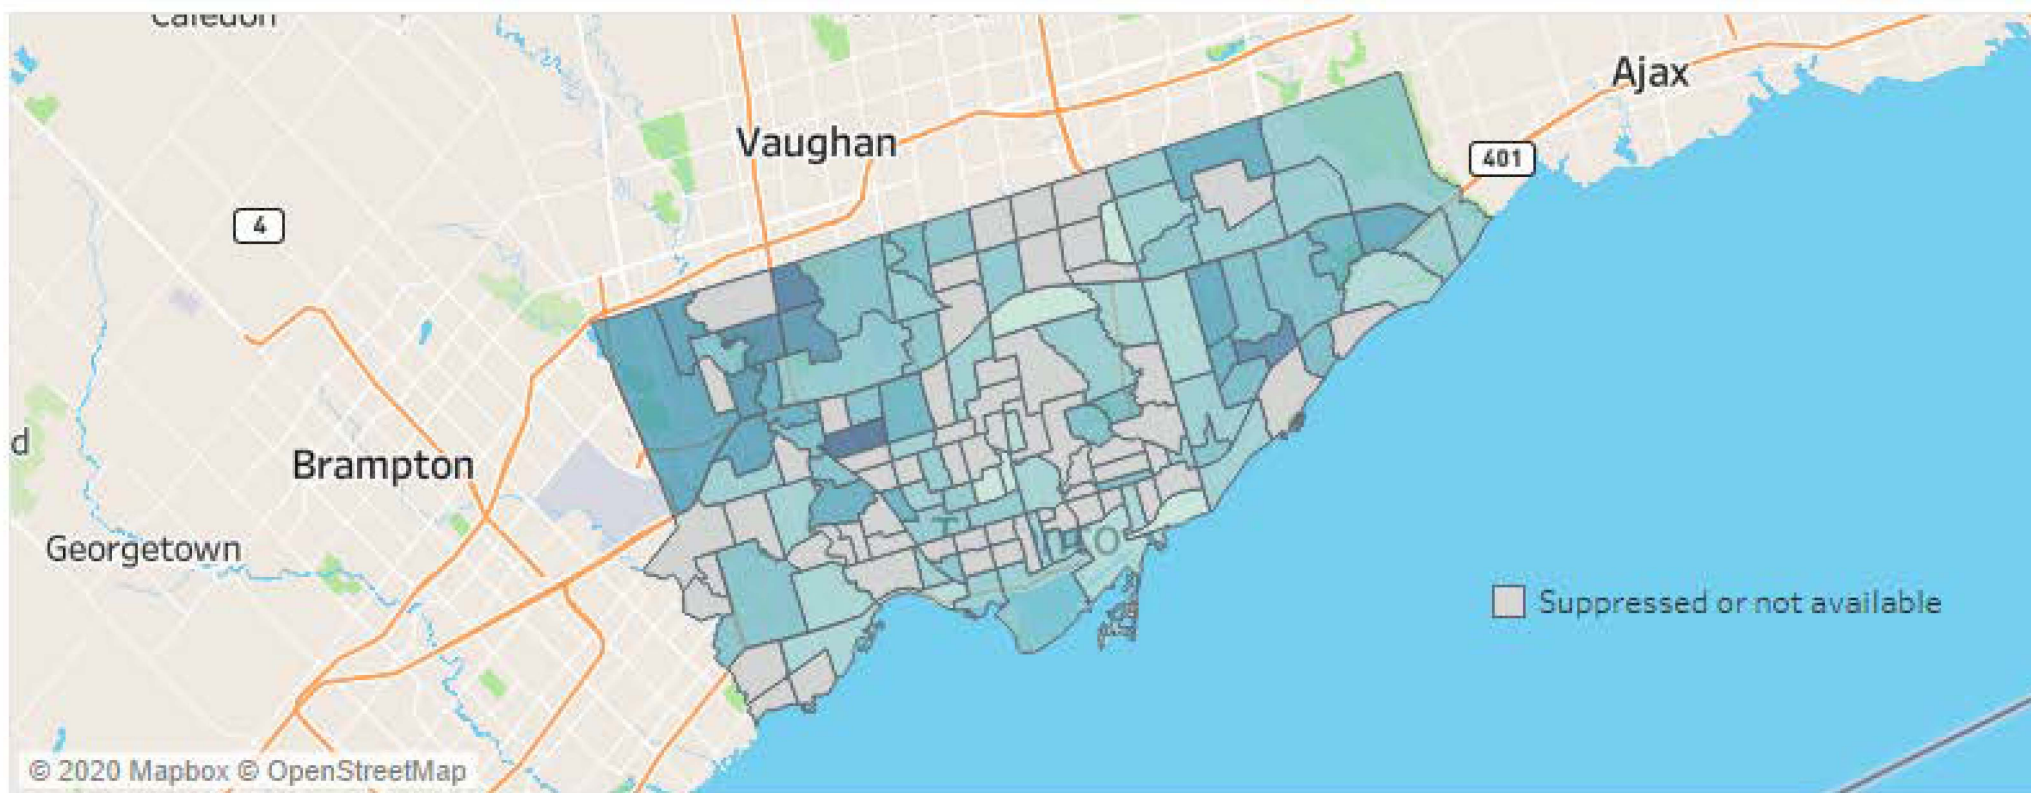

# COVID-19 case rates for Toronto neighbourhoods: September 25 to October 15, 2020

# COVID-19 percent positivity for Toronto neighbourhoods: Week October 4 to 10, 2020

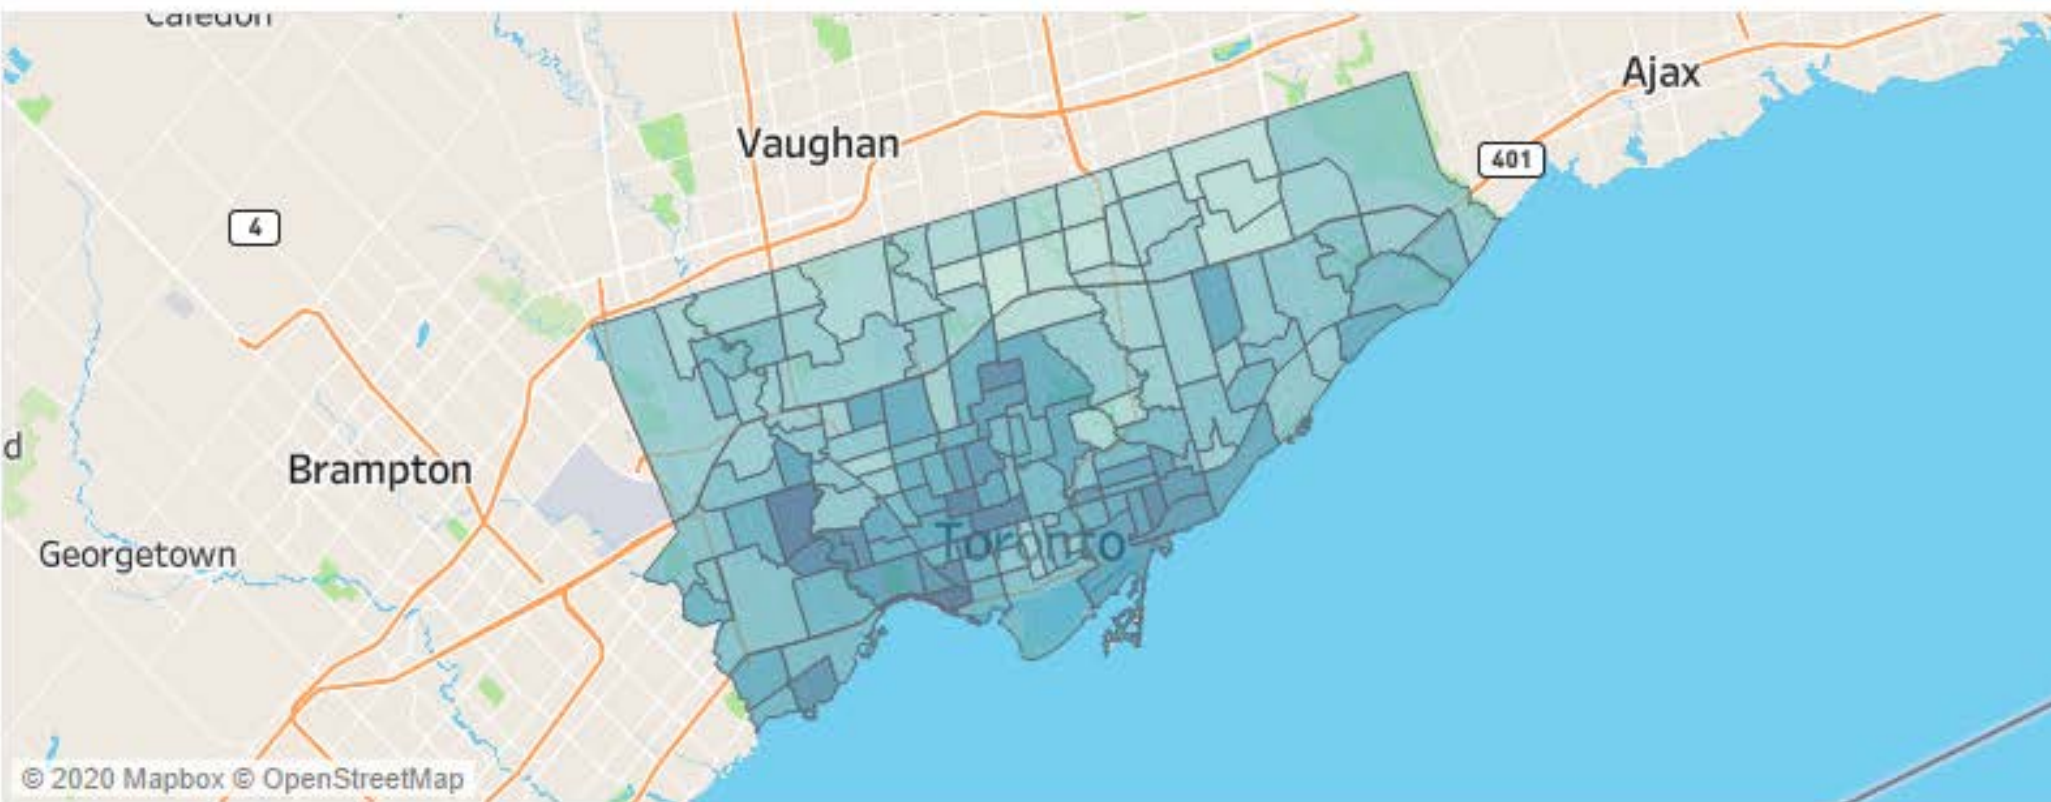

Map of COVID-19 Percent Positivity by Neighbourhood - Week of October 4, 2020\* (Incomplete Data)

# Testing rates for Toronto neighbourhoods: Week October 4 – 10, 2020

Map of COVID-19 Testing Rates by Neighbourhood - Week of October 4, 2020\* (Incomplete Data)

# COVID-19 neighbourhood indicators combined: Rustic neighbourhood example

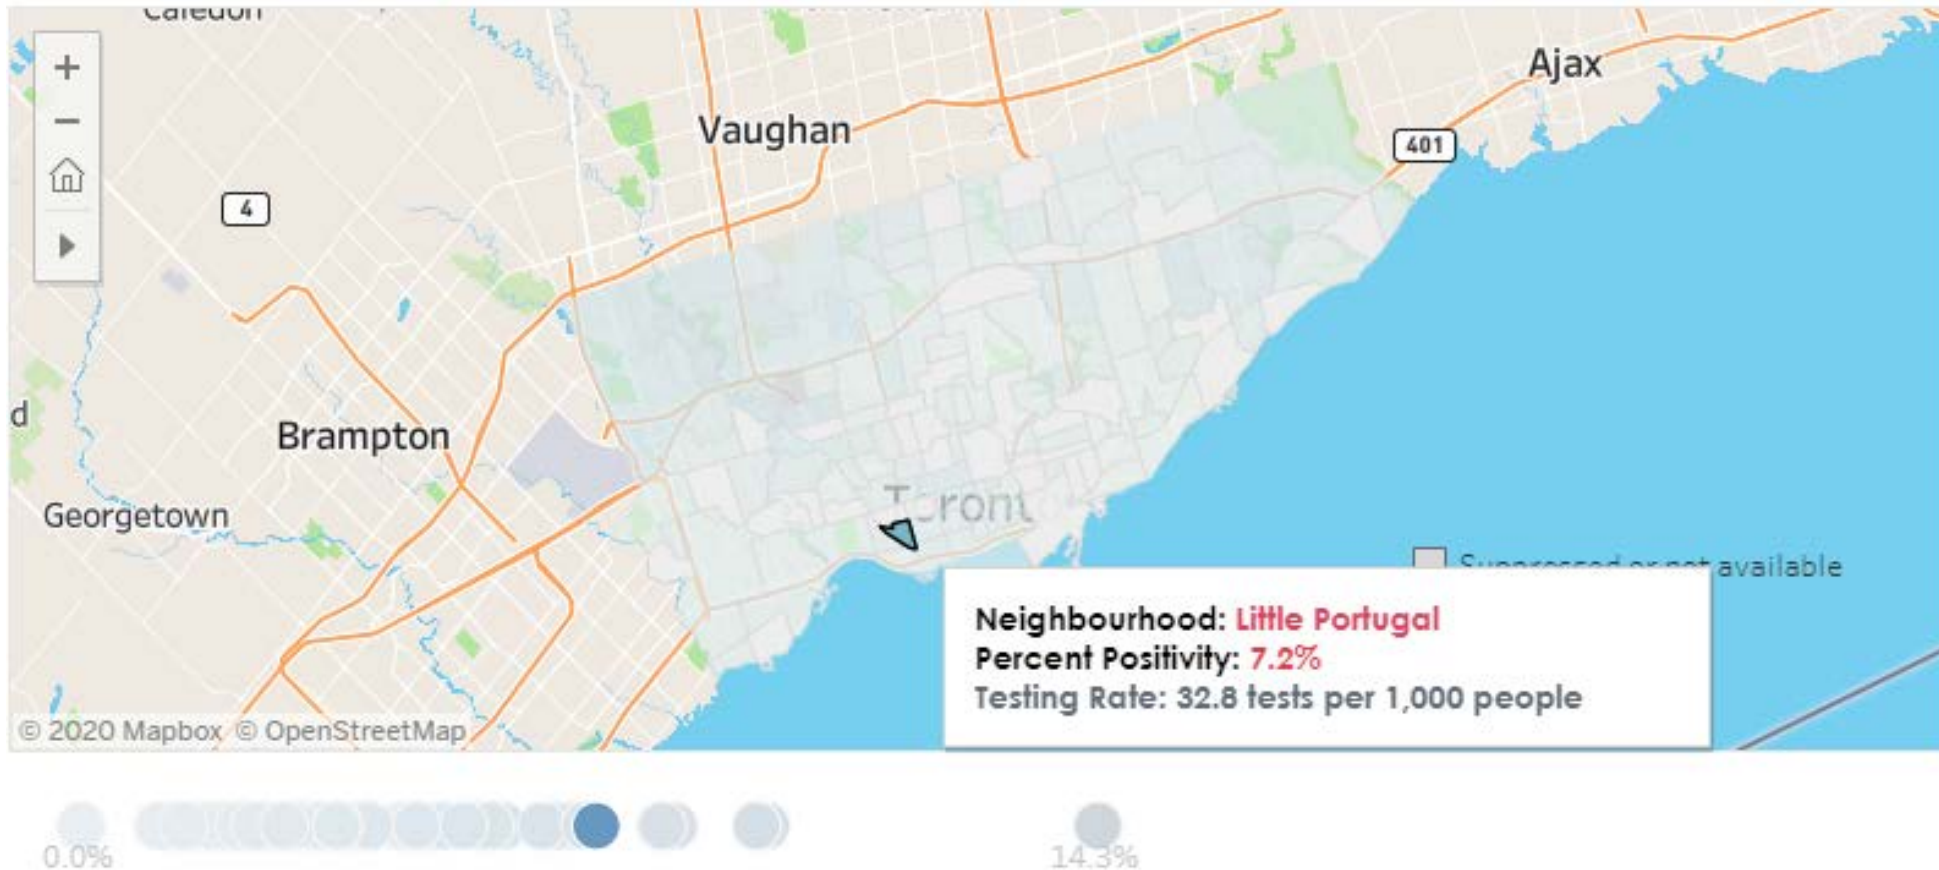

Recent Case Rate (Sept 25 to Oct 15) (rate per 100,000): **191**

Recent Case Count (Sept 25 to Oct 15): **19**

Percent positivity: **14.3%**

Testing Rate: **9.9 tests per 1,000 people**

# COVID-19 neighbourhood indicators combined: Little Portugal neighbourhood example

Recent Cases (Sept 25 to Oct 15) (rate per 100,000): **360**

Recent Case Count (Sept 25 to Oct 15): **56**

Percent positivity: **7.2%**

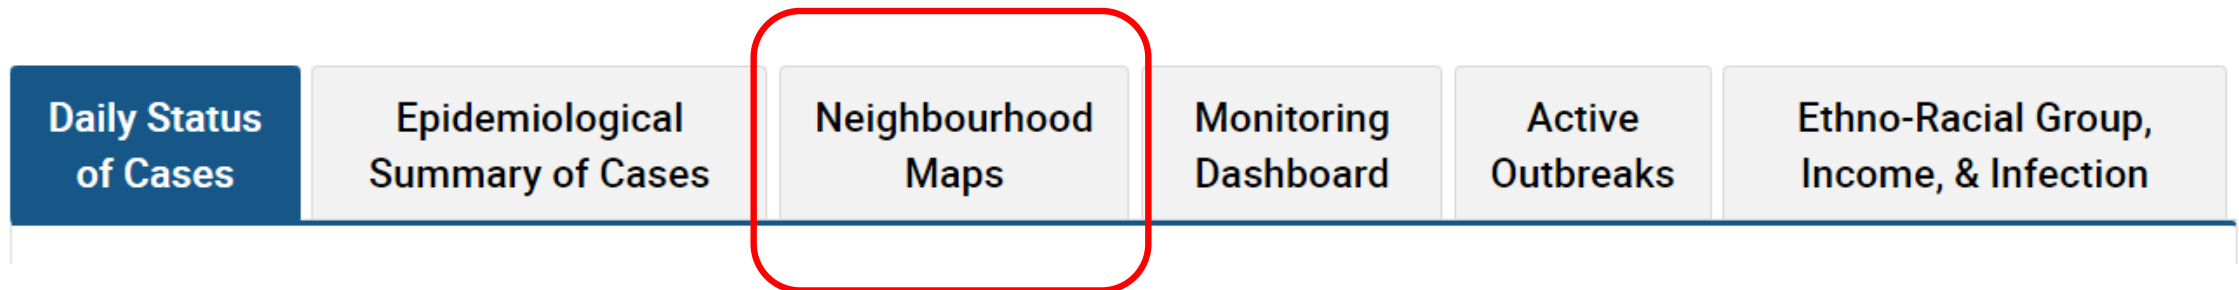

Testing Rate: **32.8 tests per 1,000 people**

# Percent positivity and testing rate data update weekly on Toronto Status of Cases dashboard

## COVID-19: Status of Cases in Toronto

If you think you have COVID-19 symptoms or have been in close contact with someone who has it, find out if you should visit an [assessment centre](#) and where to go.

# Report Recommendations

# Report Recommends

1. City Council and the Board of Health urge the Ontario Ministry of Health to ensure that the new provincial software, Case and Contact Management (CCM), meets all the needs of Toronto Public Health as determined by the Medical Officer of Health and facilitates cluster identification to target interventions and restrictions.
2. City Council and the Board of Health urge the Ontario Ministry of Health to conduct case control studies using the data collected by public health units across the province to inform decision-making through the pandemic going forward.

# Report Recommends

3. City Council and the Board of Health urge the Federal and Provincial Governments to mitigate the impacts of COVID-19 on groups that have been disproportionately affected by COVID-19 by funding and accelerating the implementation of existing strategies related to the social determinants of health, including affordable housing, eliminating homelessness, poverty reduction, food security, overdose prevention, anti-Black racism, and Indigenous health and well-being, as recommended in Attachment 1.

4. The Board of Health request the Medical Officer of Health to review and action the full set of recommendations in Attachment 1, as appropriate.

# Attachment 1

## Community Consultation Report

On July 2, 2020, the Toronto Board of Health requested the Medical Officer of Health to:

- Consult with groups that have been disproportionately affected by COVID-19
- Identify the detailed impacts experienced by these groups
- Recommend actions to reduce these impacts

July and August 2020, TPH conducted a series of consultation sessions with Toronto's 13 COVID-19 Community Cluster tables.

Cluster tables bring together a cross-section of non-profit organizations to identify urgent community needs and coordinate rapid solutions.

Consultations focused on four topic areas:

1. Adverse impacts of COVID-19 on diverse communities in Toronto;
2. Short and long-term solutions to address these impacts;
3. Social needs assessments for those getting COVID tests; and
4. Communicating socio-demographic data in ways that promote action.

# What We Heard: Adverse Impacts of COVID-19

1. Create more accessible public health information
2. Build community agency support;
3. Increase community testing and health access
4. Advocate for income supports and eviction protection
5. Support effective isolation
6. Overdose prevention and harm reduction
7. Supporting people experiencing homelessness

# Recommendations: Long-Term Actions

1. Comprehensive poverty reduction, including universal guaranteed basic income
2. Safe, high quality, and affordable housing, including supportive housing
3. Food security, including access to healthy and culturally appropriate food
4. Better wages, benefits, and protections for workers, including migrant workers
5. Equity for Black and Indigenous communities, as well as other populations that experience systemic discrimination

- Collaborate with community organizations and health care partners in developing a "social needs assessment" process with appropriate funding and resources to ensure wrap-around supports
- Continue to release disaggregated COVID-19 socio-demographic data and include information on how the City plans to take action in collaboration with impacted communities
- Conduct additional consultation with the Indigenous Serving Organizations cluster table on the impacts of COVID-19

- TPH resumed collection of individual level SDD as of October 9 (after pausing this on October 2 to address the surge of cases)
- Next refresh of Social Determinants of Health Dashboard will include complete month of data (up until September 30)

# Going Forward
