

Attachment 1: Climate Change and Health Impacts Surveillance Framework Development Process

Action	Related Activities	Outcomes
Initial Research	Completed review of key reports, publications from leading authorities	Successfully identified objectives, guiding principles, surveillance framework conceptual model and areas of focus
	Ongoing systematic monitoring of published evidence on climate change impacts on health and well-being	
Consultations	Completed consultations across TPH teams and with other City divisions	Enhanced the framework, confirming its utility and areas of focus; Formulated preliminary and new indicators
	Ongoing consultations with peer public health units, Public Health Ontario and academic researchers	Identified need to source or gather qualitative data that is meaningful to residents
Assessment	Drawing from initial research and consultations, assess availability, feasibility, quality and relevance of indicators	Identify initial list of focused indicators
	Identify gaps and required partnership, consultation or data gathering to address gaps	Identify feasible phased approach to guide implementation of climate change-related health surveillance
