

Cold Chain Incident - Vaccine Inventory Form

A cold chain incident refers to the temperature recordings in the vaccine fridge outside the 2° to 8° Celsius range. To protect the efficacy of the vaccines, report all cold chain incidents to Toronto Public Health immediately. See instructions for completing the form below. Fax the completed forms and the last three months of your temperature log book to Toronto Public Health at 416-338-2028.

Instructions

To assess the potency of the vaccines exposed to a cold chain incident, please complete columns **A** to **E** on the form. A nurse will contact you when the vaccine stability assessment has been completed. Do not use or dispose of any vaccines until it is advised by Toronto Public Health. For questions, please call our Immunization Nursing Line at 416-338-2030.

Column A: Vaccines

- identify **ALL** the vaccines in your fridge – include expired, opened vials
- do **not** include sterile water or patient purchased vaccines

Column B: Lot Numbers

- for each vaccine in your fridge, enter the lot number
- for vaccines with more than one lot number, enter each vaccine and lot number on a separate line. If there is not enough room with the corresponding vaccine name, use additional rows provided on page 4

Column C: Number of Doses

- enter the number of doses, for each row
- if a multi-dose vial is open estimate the remaining doses
- example: if vial of ten-dose influenza vaccine is half empty, enter 5 doses

Column D: Expiry Dates

- enter the expiry date for each lot number, for each row

Column E: Previous Exposure

- for each vaccine, check if it was previously exposed to a cold chain incident
- previous exposure is usually marked with red-dotted stickers

Columns F to J: For Toronto Public Health use only

- please do not write in these columns
- Toronto Public Health will complete the necessary information

Revised April 2014
