1 Summary

This report was produced to provide information on 2014 energy consumption and greenhouse gas emissions from a select group of City of Toronto operations. It contains information provided to the Ontario Ministry of Energy based on the mandates of the Ontario Green Energy Act, Regulation 397/11. This report covers the energy consumption and GHG emissions of **1,070** City of Toronto sites and buildings.

The City of Toronto collects utility data and stores the information using an energy management system. The energy management team at the City uses this system to monitor energy bills, analyze the corresponding data and verify savings from energy retrofits. This system was used as the primary source of the 2014 energy data.

In addition to the mandated operation types required by the Green Energy Act, several additional operation types have been included in this report (see Appendix 'A'). The City has chosen to exceed minimum reporting requirements based on the fact that these additional operations contribute significantly to the energy consumption and greenhouse gas emissions within the City of Toronto. Some City locations may not have been included, such as the Toronto Zoo, Toronto Transit Commission, and Exhibition Place, due to incomplete data or other challenges.

Toronto Water's treatment and pumping facilities are among the largest consumers of energy in City operations. This is due to the energy intensive operations and equipment used in these facilities as well as their extensive operating schedules. Toronto Water continues to improve its energy efficiency through its own in-house programs. Among other reported City of Toronto facilities, the top three operations with the highest energy intensity (normalized for area and operating hours) are laboratories, animal centres and indoor swimming pools.

The Green Energy Act's regulation 397/11 mandated the completion of an Energy Conservation and Demand Management (ECDM) Plan. The City of Toronto has completed the first edition of this plan and facilities have been prioritized based on energy savings potential. The City aims to build on its previous energy efficiency achievements through use of the ECDM plan as a framework for the identification, implementation and verification of future energy saving projects.

2 Background

In 2009, the Ontario legislature passed the Green Energy and Green Economy Act (GEA). As one of its objectives, the GEA aims to increase conservation by introducing measures to help Ontarians manage energy use. The Green Energy Act Regulation 397/11, published in August 2012, requires all public agencies to prepare and publish:

1. Annually updated reports on the energy consumption and greenhouse gas (GHG) emissions for City's facilities.
2. A report outlining plans for further identification and implementation of energy conservation and demand management projects throughout City facilities. The first report was released in July 2014 and will be updated every five years thereafter.

3 Synergies with Existing Mandates

The creation and implementation of this report and the ECDM plan are within the context of the City's energy and environmental mandates based on:

1. Conservation and generation measures corresponding to the proposals made in "The Power to Live Green: Toronto's Sustainable Energy Strategy" and adopted by the Toronto City Council in November 2009. This strategy features a series of recommendations and measures to achieve higher energy and operational efficiencies within City facilities.
2. Efforts and actions by City staff to achieve the recommendations made in the "Climate Change, Clean Air and Sustainable Energy Action Plan" within the City owned facilities, adopted by Toronto City Council in July 2007.
3. TransformTO is a project to engage City residents and businesses in imagining the transformative changes we will need to reduce our greenhouse gas emissions by 80% by the year 2050 as mandated by City Council. TransformTO recognizes the key leadership role City facilities will need to play in demonstrating the potential for net-zero new construction, and deep-carbon reduction through retrofitting existing buildings.

4 Sources of Data, Uncertainty & Constraints

The Energy & Waste Management Office, within the Environment & Energy Division at the City of Toronto, is responsible for gathering energy and water consumption data from various utility providers for a multitude of facilities within the City's service agencies and divisions. This data is used for populating the City's energy management database and the information contained in this report. Based on the current reporting requirements by Regulation 397/11, the consumption data in this report contains information on building specific energy consumption.

Energy billing data used in this report is comprised of digital files received from the utility companies, consolidated billing files from a third-party and paper bills. Although every effort is made to audit all bill entries, with several thousand utility bills submitted each month there is a small potential for data entry errors. The City continues to work with our utility providers to further improve data accuracy and is working on plans for automated data acquisition where possible.

Specific building design and operations need to be taken into account when examining the results in this report. For example, low energy intensities do not always imply good efficiency. Examples of such cases are old buildings with limited ventilation, vacant buildings or those with malfunctioning heating, ventilation and cooling equipment. Some facilities, such as childcare centers and smaller administrative offices can be located in shared building spaces resulting in potential sources of error in corresponding energy consumption data.

5 Results & Analysis

5.1 Overall Energy Consumption and GHG Emissions

Energy is delivered to City facilities in two forms referred to as primary and secondary energy. Primary energy is raw fuel such as natural gas or fuel oil, delivered directly to the buildings to provide services. Secondary energy is the product created from raw fuel, such as electricity purchased from the grid or the chilled water received from a district energy system. Figure 1 illustrates City of Toronto's energy consumption by fuel type, which amounts to **5,726** terajoules on the reported facilities.

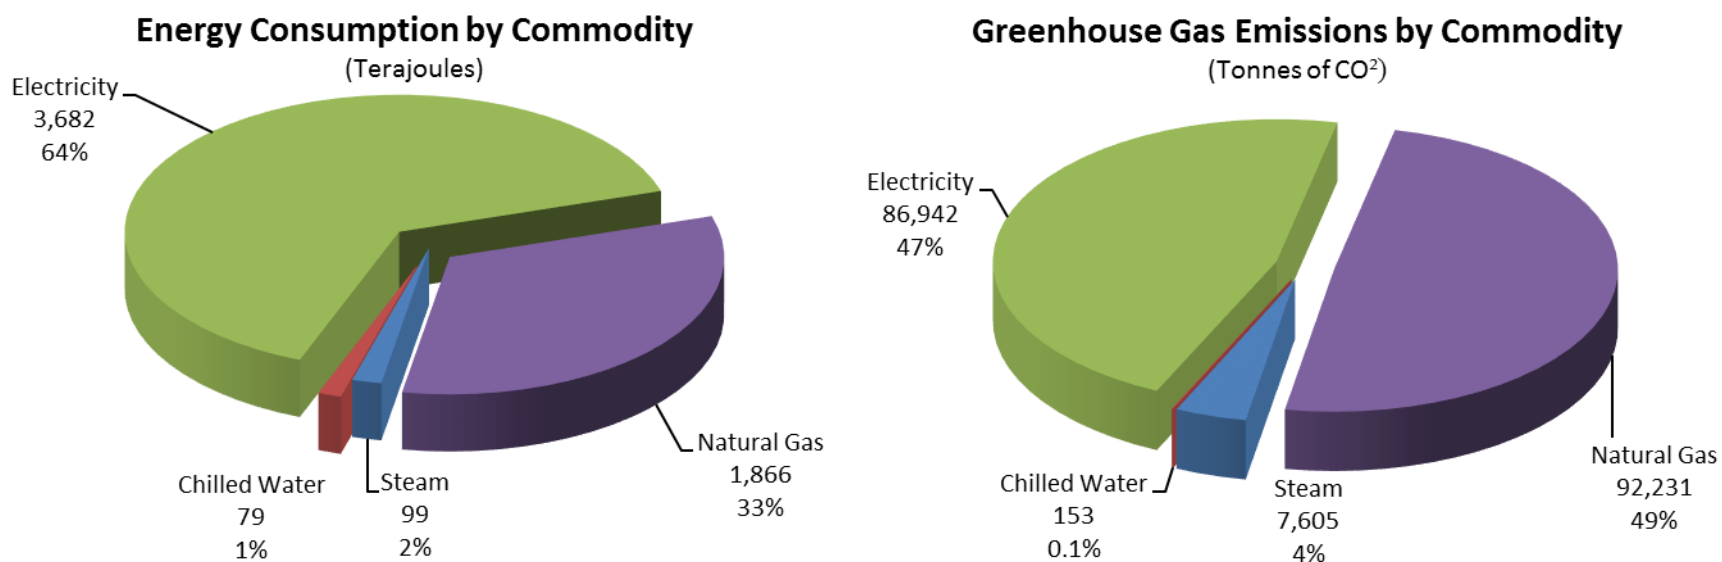

Figure 1: Energy Consumption and GHG Emissions by Energy Type

Of the reported facilities, electricity consumption far exceeds other energy sources at nearly **3,682** terajoules or **64%** of the overall energy use. A large portion of this energy use goes towards cooling, ventilation and lighting. Natural gas makes up more than **1,866** terajoules or approximately **33%** of the reported energy use. The majority of the natural gas consumption at City facilities is used for domestic hot water and space heating needs. Natural gas is also used for process heating applications such as heating water at public swimming pools.

Chilled water from the Enwave district cooling system (also known as deep lake water cooling) is used for air-conditioning in some City facilities such as City Hall, Metro Hall and most recently Union Station. This renewable source of energy supports efforts to reduce greenhouse gas emissions at the associated facilities. Many of the same facilities utilize steam, provided by the Enwave district heating system for space heating and domestic hot water heating.

Greenhouse gas emissions in City facilities are measured based on amount and type of energy used. Emission factors for the energy sources above come from two sources. Chilled Water and Steam emission factors are provided by Enwave Energy Corporation. Electricity and Natural Gas emission factors are extracted from Environment Canada's GHG National Inventory Report to the United Nations Framework Convention on Climate Change (UNFCCC).

5.2 Operational Level Energy and Greenhouse Gas Emissions

The following figures illustrate energy consumption and GHG emissions from various operations at City facilities. Water pumping, sewage treatment and water treatment plants consume the most amount of energy among city operations. This is mainly due to their continuous operation, energy intensive equipment and regulatory requirements. At the City of Toronto, a large amount of electricity is used to pump fresh water uphill in order to service businesses and residents in the north end of the City. Sewage treatment plants require energy intensive equipment to meet regulatory compliance related to effluent and odour control. Next on the list are administrative buildings which include City Hall, Metro Hall, Civic Centres and other office locations. With over 4.5 million square feet, these facilities require significant amounts of energy to operate.

Energy Consumption by Operation Type (GigaJoules)

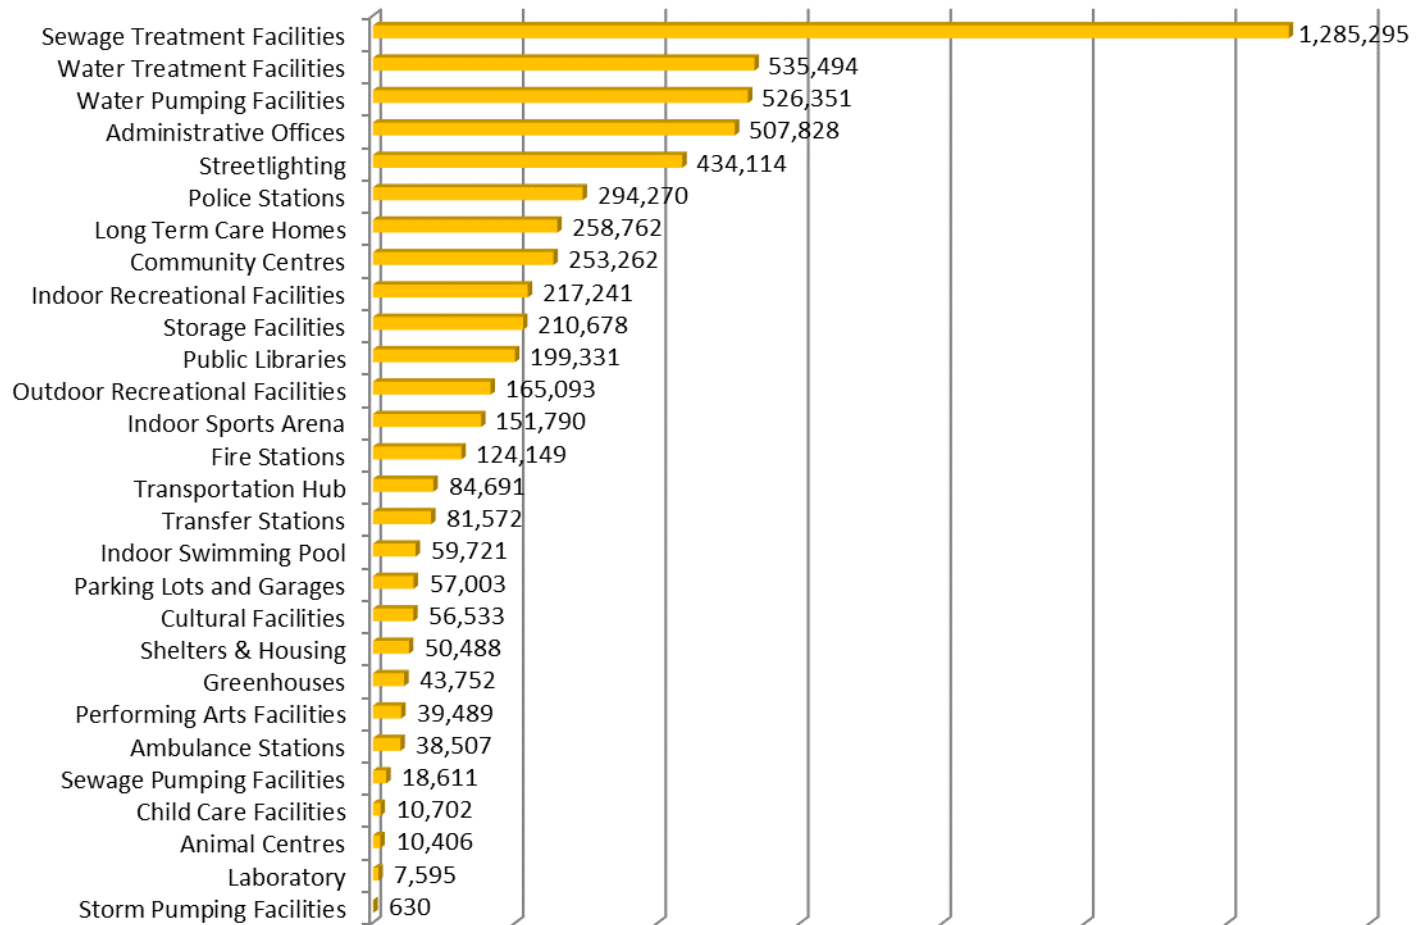

Figure 2: Energy Consumption by Operation Type (Gigajoules)

Figure 3 illustrates the percentage of energy from each utility by operation type. Some operations use far more of one utility due to their unique operations. Greenhouses use proportionally more natural gas than any other operation type due to heating needs during colder months and reduced artificial lighting needs within the glass enclosures.

Percent of Energy Consumption by Utility and Operation Type

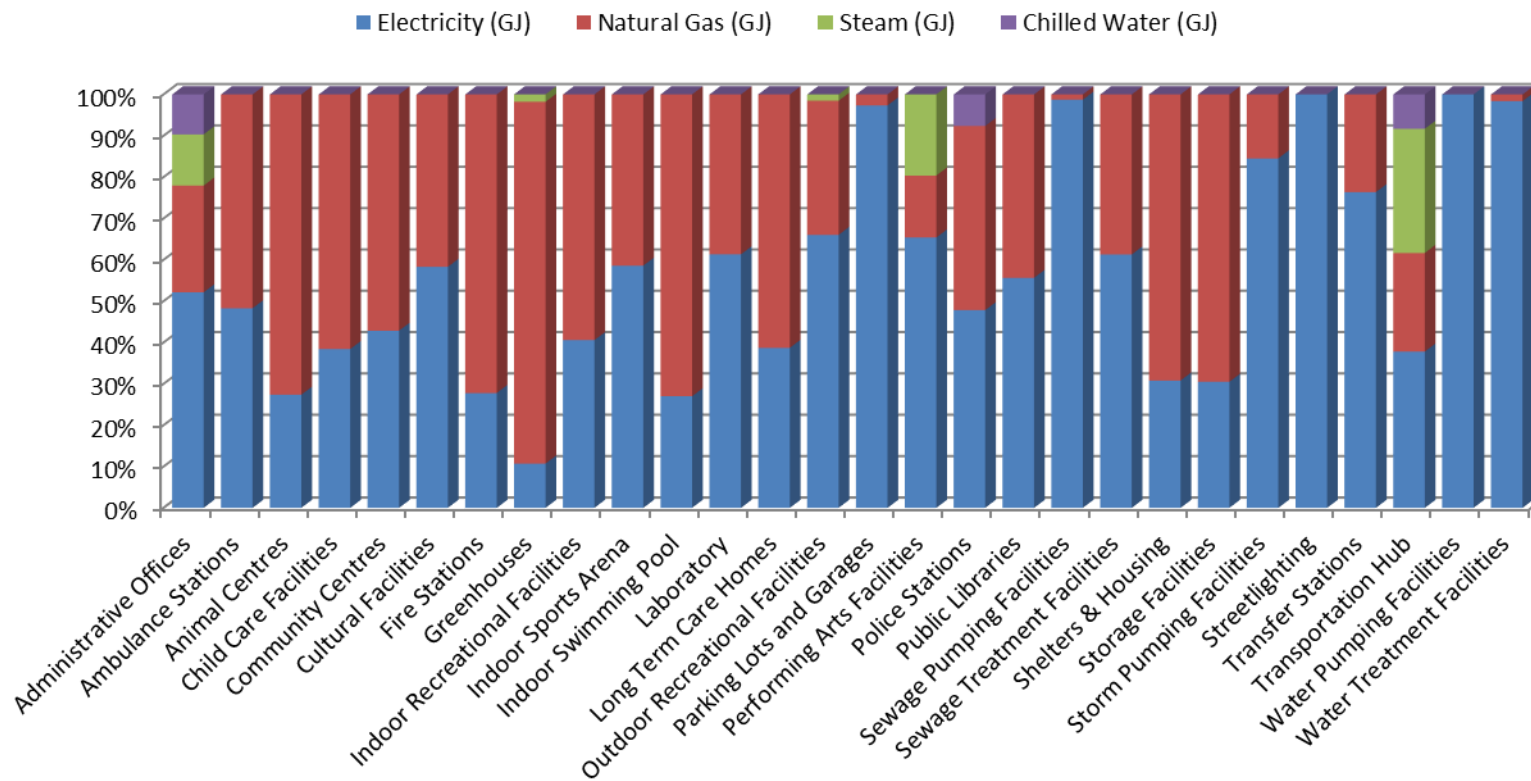

Figure 3: Energy Consumption by Utility and Operation Type

Greenhouse Gas Emissions by Building Type

(Tonnes of CO₂)

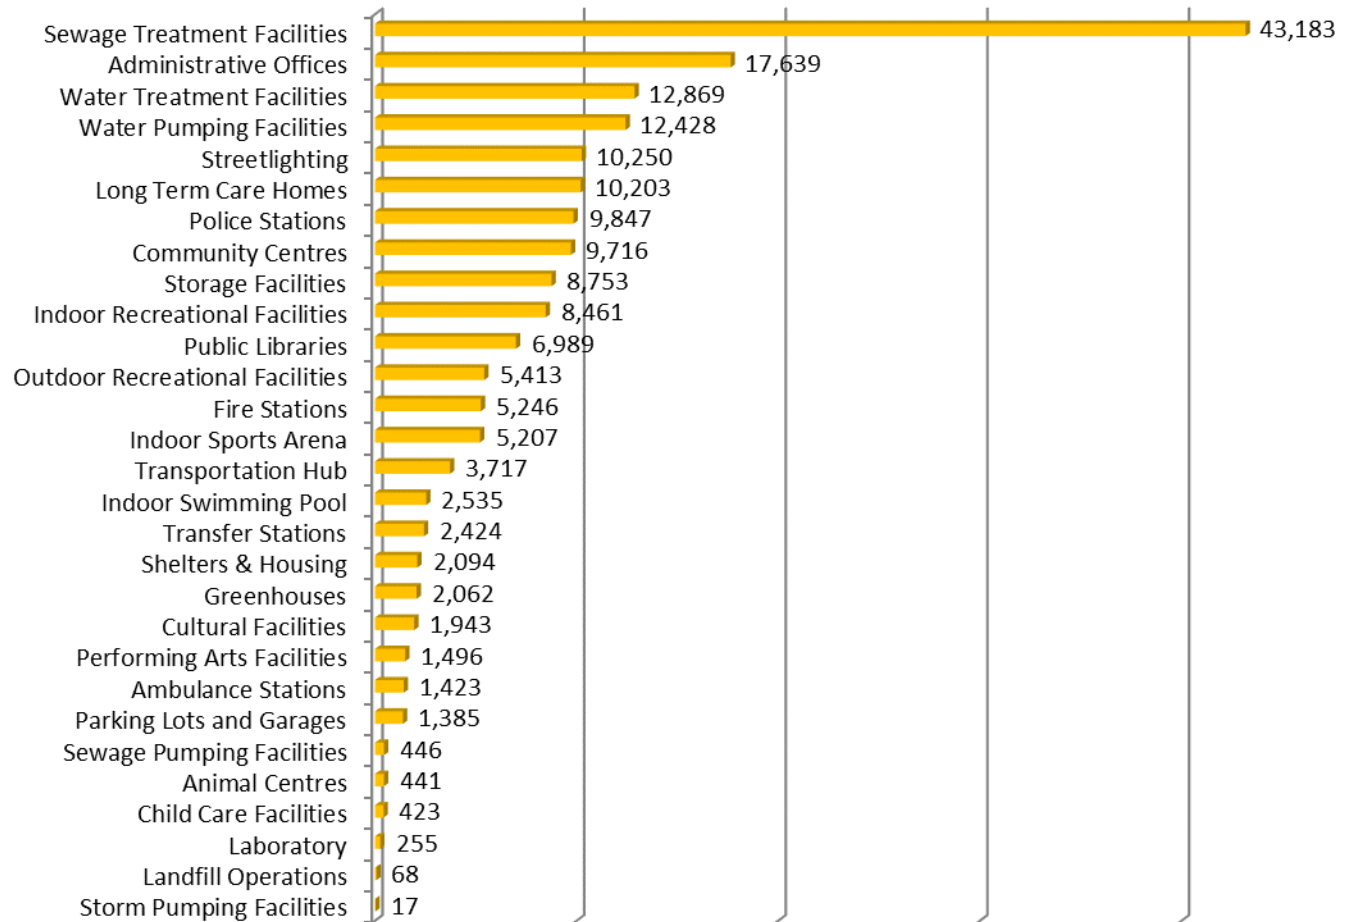

Figure 4: Greenhouse Gas Emissions by Operation Type (Tonnes CO₂)

The greenhouse gas emissions of the City's operations are mostly in line with their corresponding energy consumption. This generally implies that more energy consumption leads to higher GHG emissions. However, at the building level, emissions are influenced by the type of energy used. Figure 5 illustrates the proportionate amount of greenhouse gas emissions by commodity for all of the operation types.

Percent of GHG Emissions by Utility and Operation Type

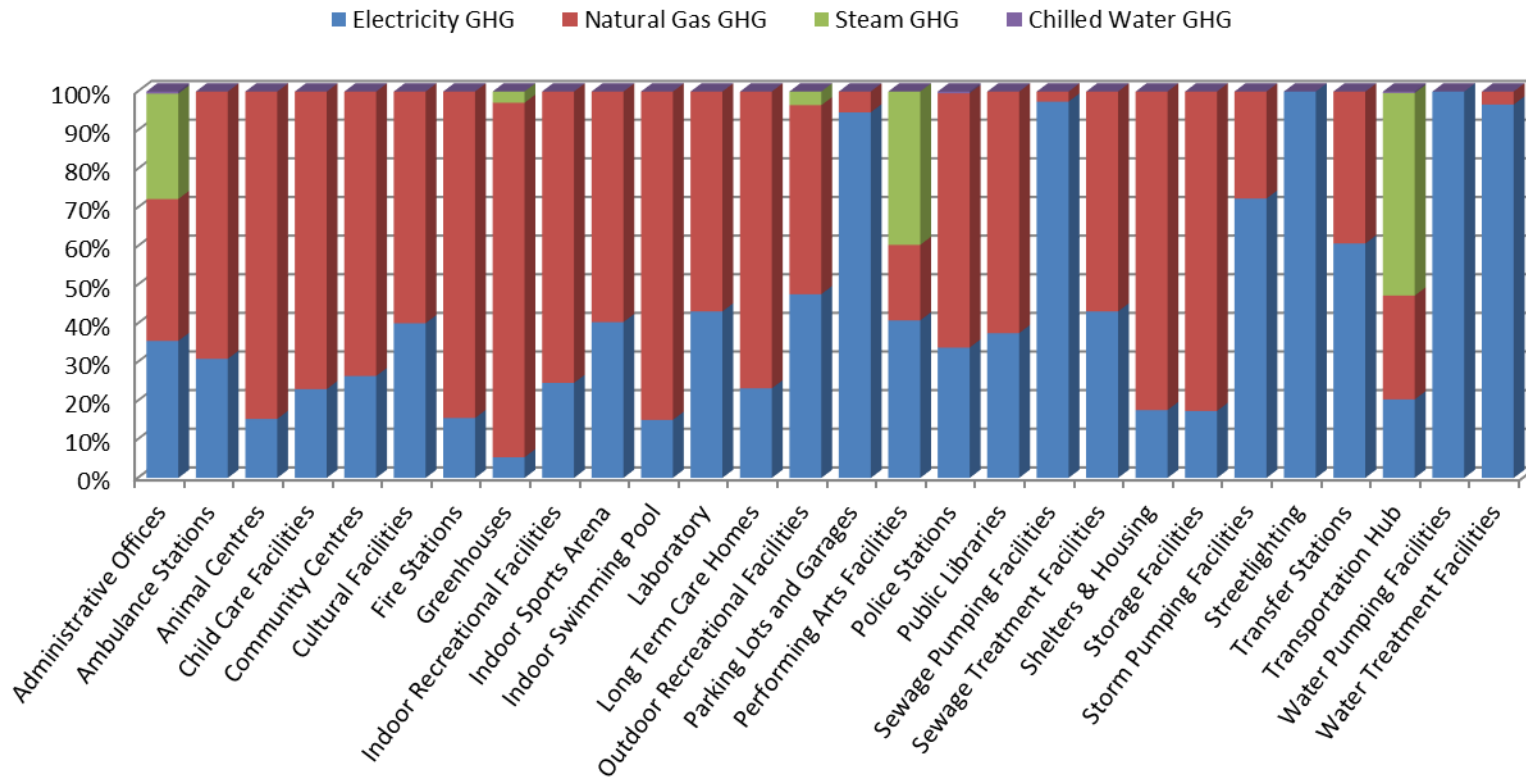

Figure 5: Greenhouse Gas Emissions by Utility and Operation Type

In Ontario, consuming natural gas as a fossil fuel compared to electricity leads to approximately 50% more GHG emissions. Accordingly, sewage treatment and administrative offices are near the top of the list due to the large amount of steam and natural gas consumed at these facilities. A good example of this is seen in Transfer Stations where natural gas accounts for only 28% of the energy consumed and nearly 42% of GHG emissions.

5.3 Energy Intensity & Analysis

Energy intensity is defined as energy consumption over a given area. It is an alternative for comparing similar facilities as it normalizes energy use per unit area. Energy intensity is used for benchmarking energy use performance and can help identify facilities with high energy consumption, justifying the need for a closer look at conservation opportunities. It is important to recognize that using energy intensity alone may be misleading due to other influencing factors such as operating hours.

Figure 6 illustrates that laboratories, indoor swimming pools and animal centres have much higher energy intensities compared to other City facilities. The high energy intensity within the laboratory category is due to the extensive equipment and HVAC systems. Indoor pools consume large amounts of energy due to their operational needs such as heating, ventilation and dehumidification processes. Based on the similar logic, public libraries, cultural facilities and performing arts facilities tend to use the least amount of energy per square foot. This is due to the lack of large energy intensive equipment within these facilities. Given the fact that these operations have varying operating hours, it is sensible to further normalize the energy intensities as illustrated in Figure 7.

Energy Intensity by Operation Type (Equivalent kWh per Square Foot)

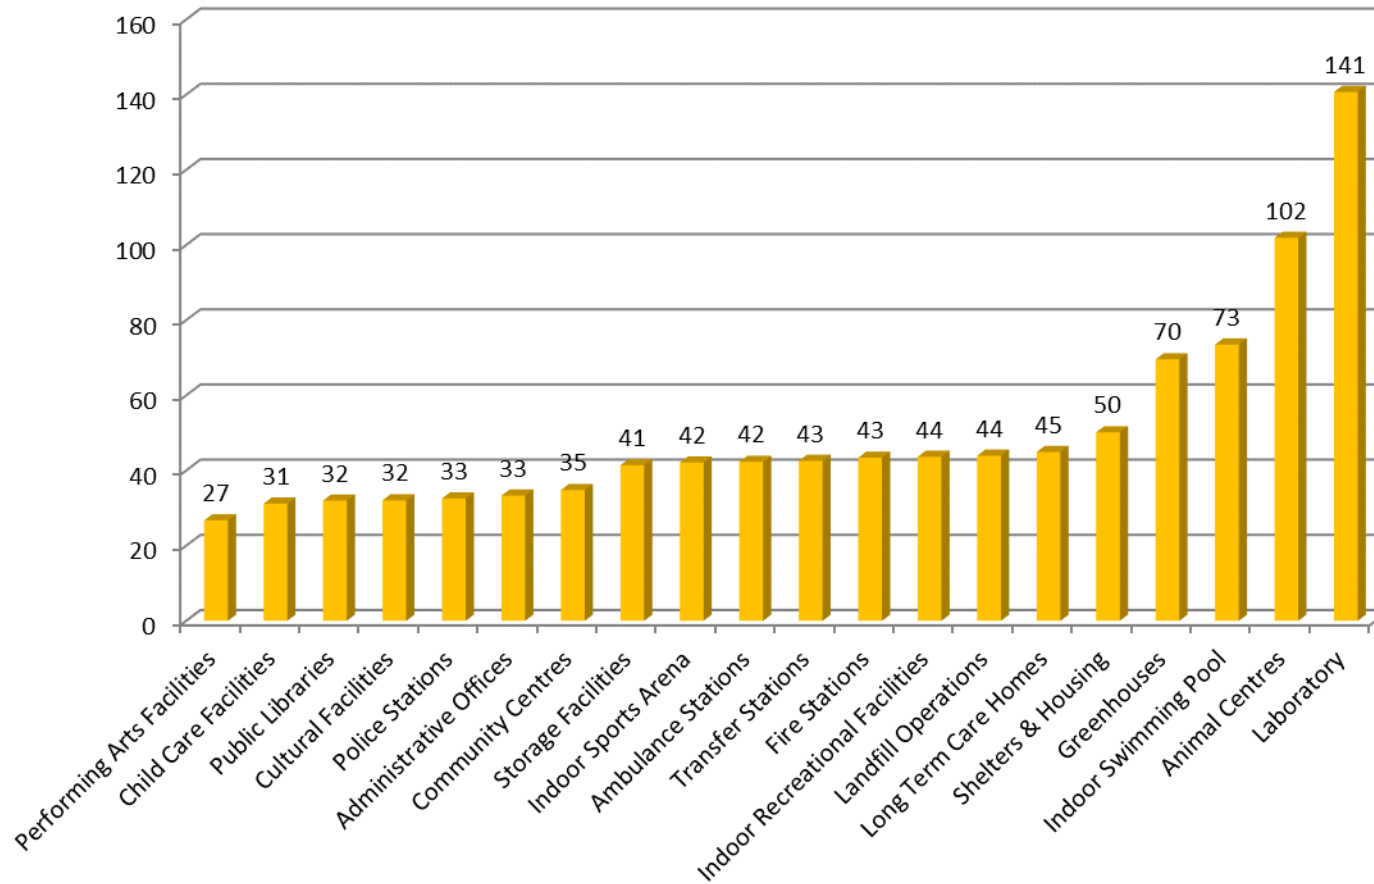

Figure 6: Energy Intensity per Operation Type

Energy Intensity per Weekly Operating Hours by Operation Type (Equivalent kWh/ft²/Hour)

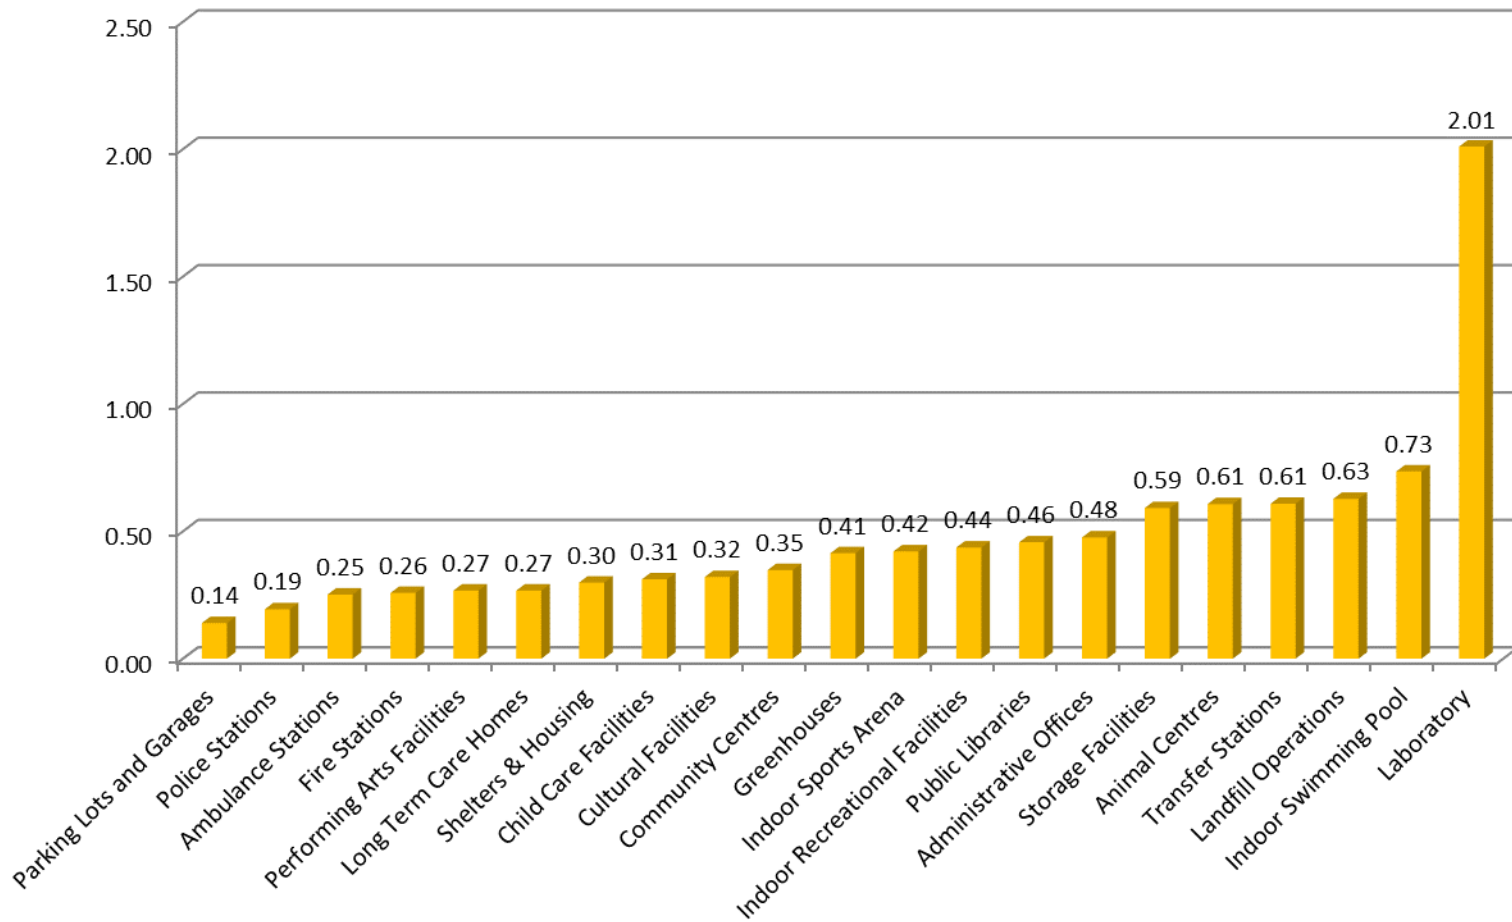

Figure 7: Average Energy Intensity per Operating Hours

Figure 7 illustrates an interesting fact about administrative offices and public libraries. Once normalized for operating hours, these facilities show higher energy intensities than others such as police and emergency services stations which run continuously. Accounting for operating hours, indoor pools as well as the laboratory remain the highest energy consuming facilities.

A breakdown of each operation can be found in Appendix 'B'. The figures presented list each facility based on operation type and average energy intensity.

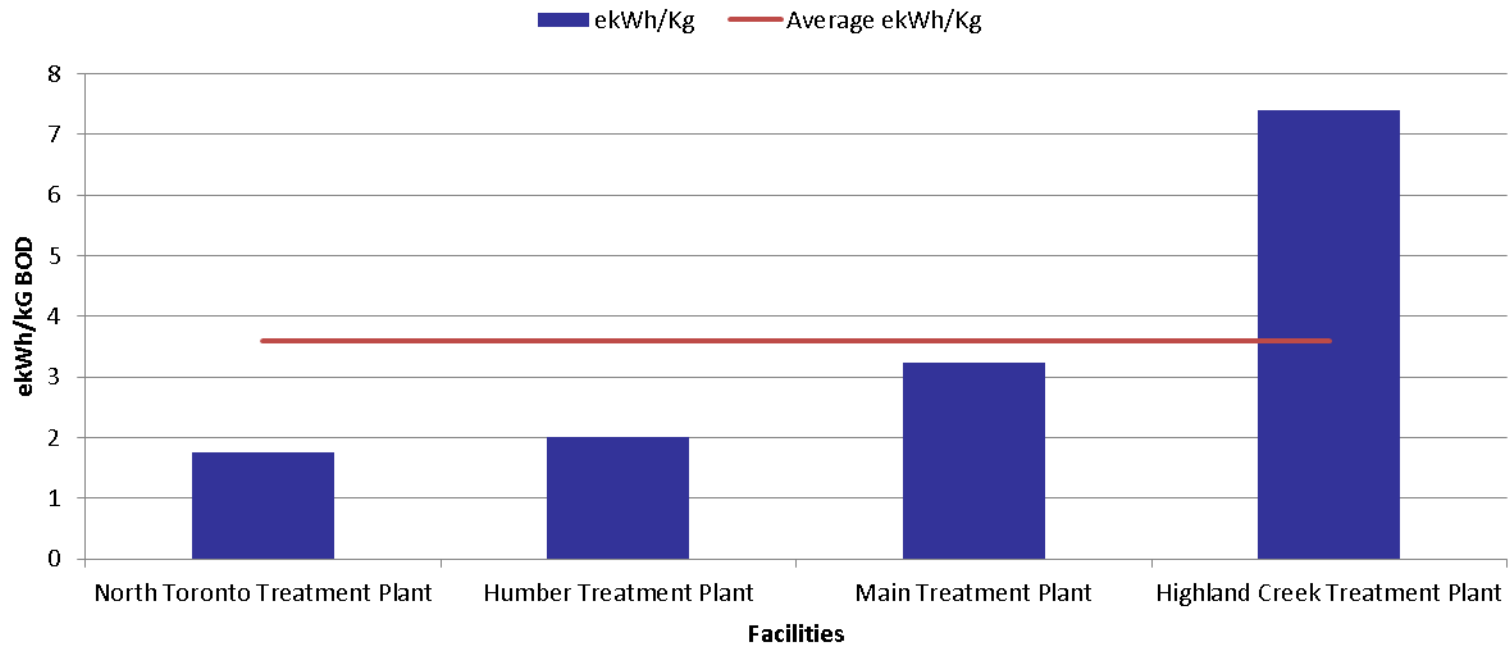

5.3.1 Energy Intensity for Sewage Treatment Facilities

Sewage treatment facilities are a unique operation type and thus require a unique approach in energy management. The focus of these facilities is to remove solid waste from the sewage, treat the remaining water and release the treated water back to the environment. Because the volume of water consumed is influenced by the quantity and type of solid waste, sewage treatment facilities should not be analyzed on the amount of water moving through the plant but by the amount of waste removed. This waste is known as biological oxygen demand (BOD) and is measured in kilograms. Biological oxygen demand refers to the make-up of the waste, which has the ability to deplete oxygen levels in surrounding water.

The following graph shows the energy intensity based on Kg of BOD Removed for each of the four sewage treatment plants. In order to comply with the legislative requirements of the Green Energy Act, these buildings have been reported to the Ontario Ministry of Energy using equivalent kilowatt-hours per megalitres (ekWh/ML) of water that flowed through the plants. The corresponding graph and table are included in Appendix 'B'.

Sewage Treatment Plant Energy Intensity

(Equivalent kWh / Kg of BOD Removed)

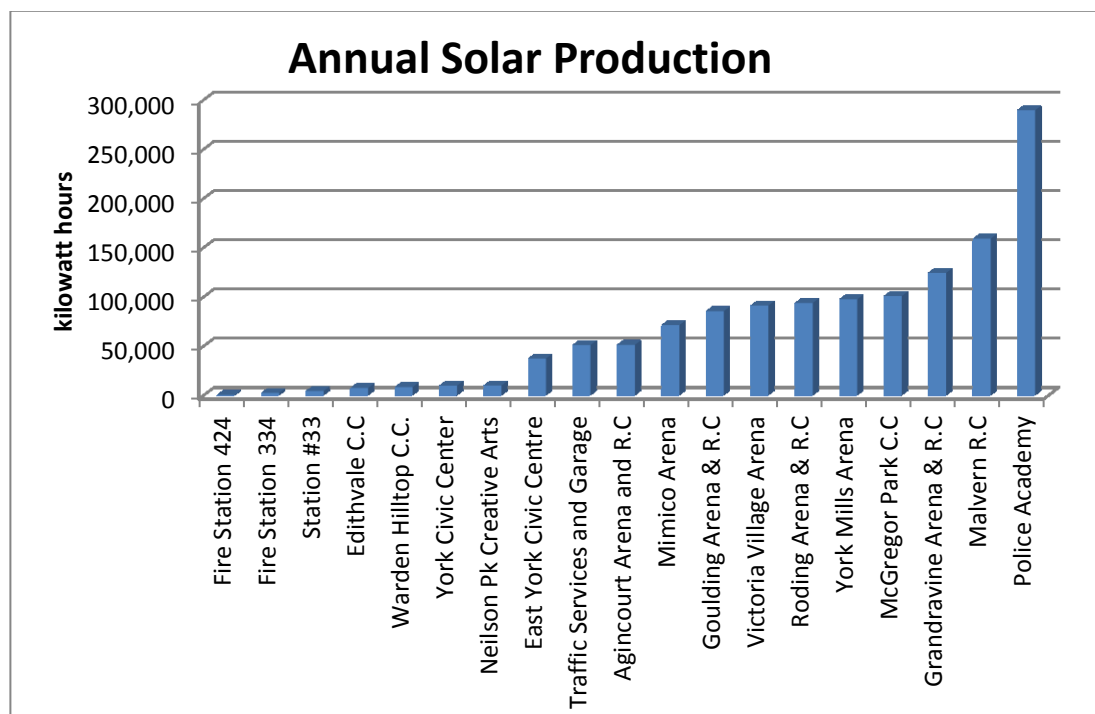

| Sewage Treatment Plants | Total Energy (ekWh) | Kg of BOD Removed | ekWh/Kg |
|--------------------------------|---------------------|-------------------|---------|
| North Toronto Treatment Plant | 2,481,769 | 1,413,782 | 1.76 |
| Humber Treatment Plant | 59,487,881 | 29,706,032 | 2.00 |
| Main Treatment Plant | 190,781,890 | 59,094,848 | 3.23 |
| Highland Creek Treatment Plant | 104,274,867 | 14,079,140 | 7.41 |

6 Solar Energy Production

As of 2014, the City had 18 solar photovoltaic installations under Feed-in-Tariff (FIT) and microFIT contracts with Toronto Hydro. These systems generate electricity using solar panels and this energy is sent directly to the Toronto Hydro electrical grid. These 18 systems produced nearly 1.3 million kWh's of clean electricity.

| Facility Name | Solar Production |
|-----------------------------|------------------|
| Fire Station 424 | 460 |
| Fire Station 334 | 2,550 |
| Station #33 | 4,530 |
| Edithvale C.C | 7,575 |
| Warden Hilltop C.C. | 8,473 |
| York Civic Center | 9,955 |
| Neilson Park Creative Arts | 10,079 |
| East York Civic Centre | 37,470 |
| Traffic Services and Garage | 51,153 |
| Agincourt Arena and R.C | 51,349 |
| Mimico Arena | 71,426 |
| Goulding Arena & R.C | 85,588 |
| Victoria Village Arena | 91,251 |
| Roding Arena & R.C | 93,920 |
| York Mills Arena | 97,674 |
| McGregor Park C.C | 100,917 |
| Grandravine Arena & R.C | 124,494 |
| Malvern R.C | 159,149 |
| Police Academy | 289,618 |
| Grand Total | 1,297,631 |

7 Appendices

Appendix A – Operation Types

Green Energy Act, Regulation 397/11

| Item | Type of Public Agency | Operation |
|------|-----------------------|---|
| 1. | Municipality | 1. Administrative offices and related facilities, including municipal council chambers. |
| | | 2. Public libraries. |
| | | 3. Cultural facilities, indoor recreational facilities and community centres, including art galleries, performing arts facilities, auditoriums, indoor sports arenas, indoor ice rinks, indoor swimming pools, gyms and indoor courts for playing tennis, basketball or other sports. |
| | | 4. Ambulance stations and associated offices and facilities. |
| | | 5. Fire stations and associated offices and facilities. |
| | | 6. Police stations and associated offices and facilities. |
| | | 7. Storage facilities where equipment or vehicles are maintained repaired or stored. |
| | | 8. Buildings or facilities related to the treatment or pumping of water or sewage. |
| | | 9. Heated Parking garages. |
| | | 10. Street lighting |
| | | 11. Long-Term Care Homes |
| | | 12. Social Housing |

Additional Operation Types Included by the City of Toronto

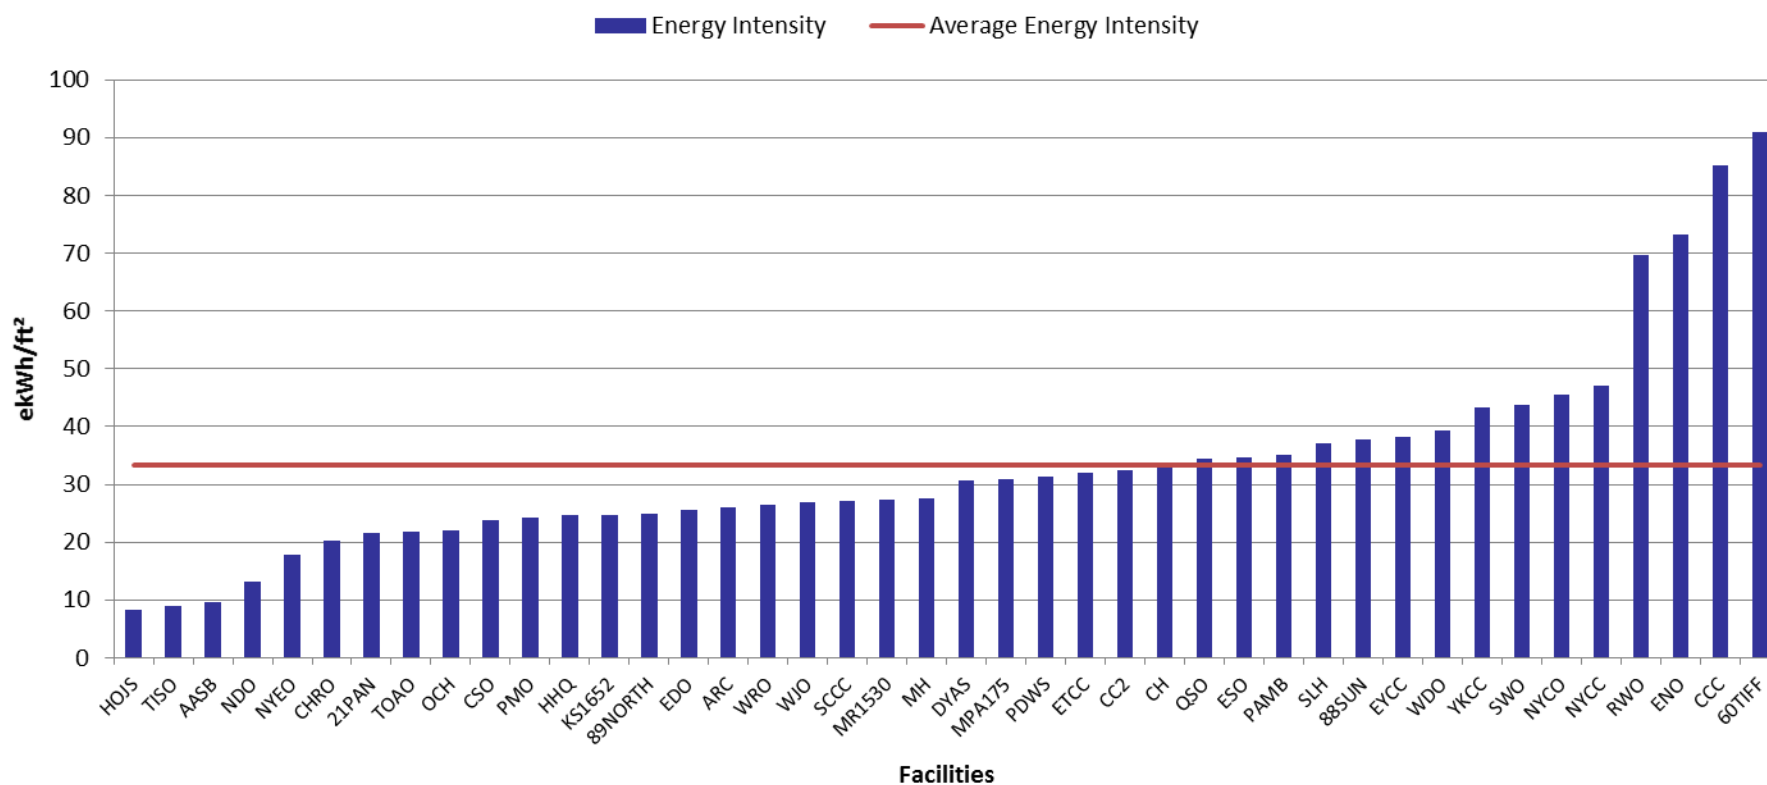

| Operation Type |
|---------------------------------|
| Storm Water Pumping Facilities |
| Landfill Sites |
| Laboratory |
| Child Care Facilities |
| Animal Centres |
| Greenhouses |
| Shelters and Housing |
| Waste Transfer Stations |
| Transportation Hub |
| Outdoor Recreational Facilities |
| Parking Lots and Garages |

Appendix B - Facility Energy Consumption & GHG Emission Templates

| | |
|---------------------------------------|-----|
| Administrative Offices | 24 |
| Ambulance Centres | 27 |
| Animal Centres | 30 |
| Child Care Facilities | 32 |
| Community Centres | 34 |
| Cultural Facilities | 39 |
| Fire Stations | 41 |
| Greenhouses | 46 |
| Indoor Recreational Facilities | 48 |
| Indoor Sports Arenas | 51 |
| Indoor Swimming Pools | 54 |
| Laboratory | 56 |
| Landfill Sites | 58 |
| Long Term Care Homes | 60 |
| Outdoor Recreational Facilities | 62 |
| Parking Lots and Garages | 70 |
| Performing Arts Facilities | 73 |
| Police Stations | 75 |
| Public Libraries | 78 |
| Sewage Pumping Facilities | 83 |
| Sewage Treatment Facilities | 86 |
| Shelters & Housing | 88 |
| Storage Facilities | 90 |
| Storm Pumping Facilities | 94 |
| Street Lighting | 96 |
| Transportation Hub | 99 |
| Waste Transfer Stations | 97 |
| Water Pumping Facilities | 101 |
| Water Treatment Facilities | 103 |

Administrative Offices

Energy Intensity by Building
(Equivalent kWh per Square Foot)

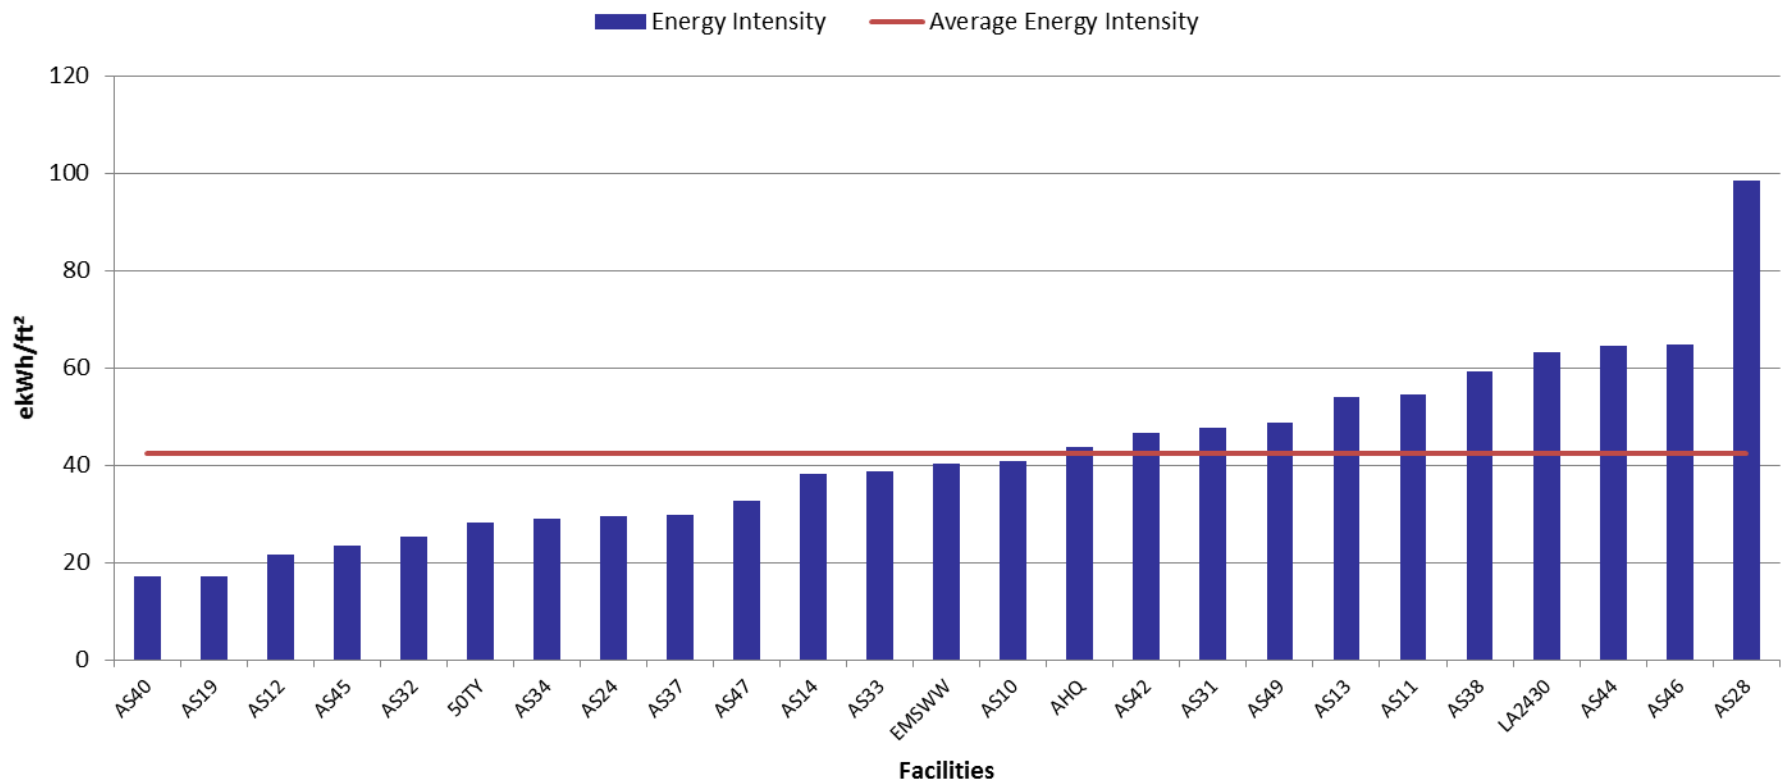

See tables on following pages for the name and address corresponding to building codes

| Building Code | Operation Name | Address | Total Floor Area (ft²) | Avg Hours / Week | Electricity (kWh) | Natural Gas (m3) | Steam (GJ) | Chilled Water (GJ) | GHG Emissions (Kg) | Total Energy (GJ) | Energy Intensity (ekWh/ft²) |
|---------------|---------------------------------|-----------------------|------------------------|------------------|-------------------|------------------|------------|--------------------|--------------------|-------------------|-----------------------------|
