

September 19, 2012

2011 Census: Marital Status, Families, Households and Dwelling Characteristics

The 2011 Census Day was May 9, 2011. Today, Statistics Canada released its third set of data from this Census, on family structure, marital status, households and dwellings.

The 2011 population of Toronto is 2,615,060, an increase of 4.5% since 2006. The data is not adjusted for undercoverage which is discussed below.

Families

- In 2011 there were 690,340 families in Toronto (up 20,235 from 2006) and 1,665,205 in the Greater Toronto Area (GTA) – up 131,540 over 2006. Toronto housed 41.5% of the GTA total, more than any other regional municipality in the GTA (although the City's proportion of the GTA has declined slightly from 44.0% since the 2006 Census). York Region was next, home to 21.7% of GTA families, but still with 328,360 fewer families than Toronto.
- Family structure continues to change. Since 2006, the number of common-law families in Toronto increased by 13.6%, lone parent families by 8.0%, whereas married couples remained the same with a slight increase of 0.2%. The number of lone-parent families in the rest of the GTA, 148,290, has now surpassed the number in Toronto at 146,990.
- The number of couple families with children in Toronto continues to decline. In 2011, 57.4% of couples had children, down from 58.9% in 2006. In the rest of the GTA, the percentage of couple families with children stood at 66.0%, down from 67.1% in 2006.
- Couples without children rose 5.6% in Toronto and increased 10.6% in the GTA between 2006 and 2011.

Marital Status

- Within the GTA, Toronto is home to 38.5% of married couples, 49.8% of common-law couples, and 49.8% of lone-parent families. The number of married couples has remained stable in Toronto, but has increased significantly in the rest of the GTA over the past two decades.
- The number of legally married persons increased slightly by 11,190 (or 1.1%) in Toronto to 991,700, and rose by 163,485 (or 11.8%) in the rest of the GTA between 2006 and 2011. The number of common law persons increased by 15.7% in Toronto, and 17.2% in the rest of the GTA. Toronto now accounts for 39.0% share of legally married persons in the GTA (41.0% in 2006).

- Since 2006, the percentage of divorced persons in Toronto decreased by 0.6%, lower than the GTA regions which decreased by 1.0%. Single persons in Toronto decreased by 3.0% and widowed persons dropped by 0.4%.

Seniors Living Alone

- There were 95,205 seniors living alone in Toronto in 2011, an increase of 6.0% over the 2006 Census. Toronto continues to have the highest share of seniors living alone in the GTA (25.2% in Toronto, versus 16.1% in the rest of the GTA).

Children Living in their Parental Home

- The number of children aged 25 years and over living at home continues to rise in all of the GTA. In 2011, 141,885 children 25 years of age and over lived in their parental home, up from 131,710 in 2006 or by 7.7% and higher than any other municipality in the GTA.
- The average number of children at home per census family remains higher in the Rest of the GTA (1.3) than in Toronto (1.1).

Households

- In 2011, the number of Toronto households stood at 1,047,880, growing 7% since 2006. Toronto accounts for 48.2% of GTA households, a decrease from 49.8% in 2006.
- Toronto households consist of 37.3% non-family households, 59.7 % single-family households and 3.0% multiple-family households. Since 2006, non-family households increased by 13.5%, single-family households increased by 3.9% while multiple-family households dropped by 4.6%.
- As a percentage of all GTA households, the highest proportion of non-family households is in Toronto (65.5%) while the highest proportion of single-family (57.8%) and multiple-family (64.4%) households are in the rest of the GTA. The non-family household type was the fastest growing type of household across the GTA.
- As of 2011, the number of one-person households in Toronto was 331,180, an increase of 12.1% over 2006. Larger households of 4 to 5 persons increased 0.5% while households of 6 or more persons declined over this period by 0.2%.
- The average number of persons in private households is lowest in Toronto (2.5) and highest in York and Peel Regions (both 3.2).

Structure Type

- Total number of occupied private dwellings in Toronto grew from 979,310 in 2006 to 1,047,875 in 2011, a growth rate of 7.0% since 2006.
- Single and semi-detached houses, duplexes, and low-rise apartments decreased as a proportion of all dwellings in Toronto between 2006 and 2011, while the proportion of row/town houses and high-rise apartment units increased. In terms of percent change by type of structure since 2006:

- Single and semi-detached houses increased by 3.0% and 4.2% respectively;
 - Row and townhouses increased by 10.3%;
 - High-rise apartments increased by 13.0%;
 - Low-rise apartments increased by 0.6%;
 - Duplexes increased by 1.5%;
 - Moveable dwellings decreased by 31.3%.
- The increase in high-rise apartment units between 2006 and 2011 represents the largest absolute increase between Census years since 1991.
- The number of single and semi-detached homes rose throughout the GTA by 93,965 units or by 9.4%.

Tenure and Period of Construction

- Unexpectedly, Statistics Canada has not released at this time data regarding the tenure of households and the period of construction of the dwellings occupied by these households. Further releases of data by Statistics Canada regarding families, households and structural types of dwelling are now scheduled for October and November 2012.

Tables, Charts and Maps

- A variety of illustrative tables and charts are attached.
- Maps are attached which show the distribution of Seniors 65 Years and Over Living Alone, Average Number of Persons in Private Households, and Absolute Change in the Average Number of Persons in Private Households 2006-2011.

FREQUENTLY ASKED QUESTIONS:**Why do the totals vary from table to table?**

The totals vary due to rounding of some of the totals by Statistics Canada to the nearest 5. Also, the sum of a characteristic may not precisely match the total number of households.

What is meant by the term “undercoverage”?

Statistics Canada's numbers upon release and as reported above do not account for undercoverage. Although Statistics Canada makes a great effort to count every person, in each Census a notable number of people are left out for a variety of reasons. For example, people may be traveling, some dwellings are hard to find, and some people simply refuse to participate. Statistics Canada takes this into account and estimates an 'undercoverage' rate for the urban region (CMA) every Census, but not for the City. The 2006 net undercoverage rate for the Toronto CMA is 4.94% ± 0.56%.

Net undercoverage also varies by age and sex and is highest for those between 15 and 44 years of age. In 2006, net undercoverage peaked at 9.91% for males and 6.08% for females 24-34 years of age, per the *2006 Census Technical Report: Coverage*, Cat. No. 92-567-X, released March 2010.

Is Toronto on track with the anticipated population and household growth?

The City's population is on track with the population forecast in the Provincial Growth Plan for the Greater Golden Horseshoe. The *Growth Plan* anticipated a 2011 population of 2,760,000, including Census undercoverage. The City's 2011 Census population is reported as 2,615,060. Given the 2006 net undercoverage rate for the Toronto CMA of 4.94% \pm 0.56%, the City's estimated actual population in 2011 is 2,744,000 \pm 15,000. This is very close to the level anticipated by the Growth Plan.

The average number of persons per household (PPH) in Toronto declined by 0.13 between 2001 and 2011, from 2.63 to 2.50. The City's projections (see [Flashforward](#)), based on the 1996 Census, correctly projected the 2001 average PPH but anticipated only a slight decline to 2.62 by 2011. By comparison, [The Growth Outlook for the Greater Golden Horseshoe](#) forecasted that the average PPH would decline from a high of 2.76 to 2.58 during the same timeframe, or by 0.18. Because the *Growth Outlook* anticipated a greater decline in average PPH than actually took place, this forecast anticipated a far higher rate of household growth than actually occurred.

The City's household growth is below that anticipated by the *Growth Outlook*, even though the population growth is on track with that forecast. The actual rate of household growth from 2001 to 2011 was between the rates anticipated by *Flashforward* and the *Growth Outlook*. In 2011, there were 1,047,877 households in the City of Toronto, an increase of 11.1% from 2001. The City's projections (without undercoverage) anticipated a growth of 10.6% and are within 7,000 households of the Census result while the *Growth Outlook* forecasted a faster rate of household growth at 13.8% and 20,000 more households than actually occurred.

Overall, the City's population growth is on track with the regional forecast, and the projected household growth has proven to be a good estimate of future households.

How do the changes in the 2011 Census methodology affect this release?

There have been changes in the way information has been collected for portions of the 2011 Census. This will impact the extent to which comparisons can be made with previous Census periods on some Census variables. The information previously collected by the long-form Census questionnaire was collected in 2011 as part of the new voluntary National Household Survey (NHS). The numbers in this particular release are from questions that are part of both the 2006 and 2011 Censuses and can be compared.

Why are some data not mapped in this report at smaller geographies?

Not all of the data at the Census Tract and Dissemination Area were released on September 19th by Statistics Canada. Other variables about Families at these smaller geographies will be released in stages in October and November 2012.

Where are other data such as income, education, and ethnicity?

The City of Toronto will be preparing Backgrounders coinciding with each release of data from the 2011 Census and the National Household Survey.

The 2011 Census release schedule is as follows:

- Population and Dwellings – February 8, 2012 (Backgrounder: <http://www.toronto.ca/demographics/pdf/2011-census-backgrounder.pdf>)
- Age and Sex – May 29, 2012 (Backgrounder: http://www.toronto.ca/demographics/pdf/censusbackgrounder_ageandsex_2011.pdf)
- Families, Households and Marital Status – September 19, 2012
- Structural Type of Dwelling and Collectives – September 19, 2012
- Language – October 24, 2012

The results of the new voluntary National Household Survey (NHS) will be released in 2013:

- Immigration, Citizenship, Language, Ethnic Origin, Visible Minorities, Religion, Aboriginal Peoples – May 8, 2013
- Labour, Education, Place of Work, Commuting, Mobility, Migration, Language of Work – June 26, 2013
- Income, Earnings, Housing and Shelter Costs – August 14, 2013

When are the City's Ward Profiles and Neighbourhood Profiles being released?

The Ward Profiles are based on a series of custom tabulations from what are now the Census and the NHS. City Planning staff will update the Ward Profiles when Statistics Canada can provide the necessary custom tabulations based on 2011 data from each Survey, beginning in late 2012 and subsequently in late 2013. The current Ward Profiles can be found at:

<http://app.toronto.ca/wards/jsp/wards.jsp>

The Neighbourhood Profiles will be released through the Social Development Finance & Administration Division a few weeks after each Census and NHS release. These profiles are released sooner than the Ward Profiles because the data are not based on custom tabulations. The current Neighbourhood Profiles can be found at:

<http://www.toronto.ca/demographics/neighbourhoods.htm>
