## EXECUTIVE SUMMARY

MMM Group Limited (MMM), a WSP Global Inc. company, was retained by the City of Toronto to conduct a Phase One Environmental Site Assessment (ESA) for the Glen Road Pedestrian Bridge Environmental Assessment Study that will review options for the replacement of the aging infrastructure.

The Subject Property includes the existing Glen Road pedestrian bridge and the lands within 30 metres of the bridge and surrounding entry points. The pedestrian bridge spans across the Rosedale Ravine Lands and extends from Bloor Street East in the south to Glen Road in the north. The southern limit of the pedestrian bridge connects to Glen Road through a short tunnel which runs underneath Bloor Street East. The Study Area includes a 250 metre buffer surrounding the Subject Property and is comprised of primarily residential and commercial property use.

The objective of the Phase One ESA was to identify actual and potential sources of environmental liabilities associated with the current and historical operation of the properties within the Study Area. Through meeting this objective, properties within the Study Area were classified as being an Area of Potential Environmental Concern (APEC) with high, moderate or low potential for contamination on the Subject Property. As such, the need for additional environmental investigations was considered. The following classifications of properties within the Study Area were identified:

### APECs with High Potential for Contamination

Two APECs are considered to have a high potential for contamination to have migrated from their location within the Study Area to the Subject Property, because the contaminant is recognized to be mobile in the environment and the location is either adjacent to or upgradient of the Subject Property. The APECs are described as follows:

- ◆ 441 Bloor Street East is adjacent to the southwest boundary of the Subject Property. The Ecolog ERIS report indicated there are records of historical private USTs used for fuel storage, installed in 1990 and remaining in use as of 2008, the date of the last updated record. The database search also identified this property as a registered generator of subject wastes, including oil skimmings, sludges and light fuels. The property is occupied by a City of Toronto fire station and the noted activities are likely associated with the maintenance and re-fuelling of fire vehicles. Fuelling operations are potential sources of contamination and because this property is located adjacent to the southwest limit of the Subject property, it is considered to be a high potential for contamination.
- ◆ 40 Glen Road, adjacent to the northwest boundary of the Subject Property was identified through a record of a TSSA Variance indicating that a UST was abandoned at this property and the Ecolog ERIS report also indicates that the property registered as a generator of light fuels in 2009. No information was available regarding the variance that was issued to allow the UST to be abandoned in place. Storage and use of fuels is a potential source of contamination, and because this property is adjacent and upgradient to the Subject Property it is considered a high potential for contamination.

### APECs with Moderate Potential for Contamination

One APEC was identified to have a moderate potential for contamination on the Subject Property based on the activity and distance to the Subject Property. The APEC is described as the following:

- ◆ 1A Dale Avenue is adjacent to the northeast boundary of the Subject Property and is reported as a registered waste generator of light fuels from 2006 to 2008. Based on the historical uses at this address, the waste may have been associated with previous construction operations at the multi-tenant residential building. The use of fuels in quantities that generated waste is a potential source of contamination with a moderate potential to have migrated to the Subject Property.

### **APECs with Low Potential for Contamination**

APECs identified as having a low potential for contamination of the Subject Property are as follows:

- ◆ Historical fuel oil tanks, dated 1927 and 1928, were reported by Ecolog ERIS to be present at 14, 41 and 46 Glen Road. Any historical fuel oil spills from the filling/operation of the tank may have contributed to possible subsurface contamination within the limits of the Subject Property. Based on the age of the tanks there is the potential that any subsurface contamination related to the historical operation of the fuel oil tanks may have been remediated through subsequent land developments.
- ◆ Roadways, right-of-ways, parking lots or other open space/vacant areas that may have been subjected to the use of road salt but are not otherwise suspected to contribute to subsurface contamination.
- ◆ Several existing or historical dry cleaning facilities within the Study Area. Dry cleaning facilities generally represent a high potential for environmental contamination. Our review indicated that these operations were in the inferred downgradient direction of groundwater (and therefore contaminant) flow or were distant from the Subject Property. Because of these factors, the activity of dry cleaning that would normally result in a high concern was categorized as being APECs with low potential for contamination.

### **Recommendations**

High and moderate APECs are located adjacent to or near the Subject Property. As such, a subsurface investigation, including chemical analysis of soil and groundwater, is recommended to be completed in areas of future bridge foundations to define the environmental conditions that may be encountered during construction (for the purpose of health and safety) and to support excess material management.

## 1.0 INTRODUCTION

### 1.1 Background

MMM Group Limited (MMM), a WSP Global Inc. company, was retained by the City of Toronto to conduct a Phase One Environmental Site Assessment (ESA) for the Glen Road Pedestrian Bridge Environmental Assessment Study. The Environmental Assessment is considering options for the replacement of the aging bridge infrastructure. The ESA considered the Subject Property consisting of the existing pedestrian bridge and lands under and around it within 30 metres. This includes the Rosedale Ravine Lands under and around the bridge and 30 metres to the north on Glen Road and 30 metres east on Dale Avenue beyond the northern bridge access point, and 30 metres south on Glen Road beyond the southern bridge access point.

Both the Subject Property and lands within 250 meters of the Subject Property, referred to as the Study Area, were assessed as part of this ESA. The land use within the Study Area includes residential, commercial and vacant lands. The Subject Property and Study Area are shown on **Figures 1 and 2**.

### 1.2 Site Overview

The Subject Property includes several municipal parcels located within the areas of Rosedale Valley Road and Bloor Street East, generally extending from approximately Glen Road and Dale Avenue intersection in the north to south of Bloor Street East (**Figure 1**). The total area of the Subject Property is approximately 9,400 m<sup>2</sup> (0.94 ha). The approximate coordinates of the centre point of the Subject Property are NAD 83, Zone 17, UTM 631,002 E and 4,836,830 N. The boundary of the Subject Property is shown on **Figure 2**. Aerial photographs of the Subject Property and surroundings are included in **Appendix A**.

## 2.0 SCOPE OF INVESTIGATION

The objective of the Phase One ESA was to identify actual and potential sources of environmental liabilities associated with the current and historical operation of the properties within the Study Area. Where an environmental liability was identified, the properties or areas were identified as being an Area of Potential Environmental Concern (APEC) and the potential for contamination was classified as high, moderate or low, depending on the potential for contamination to be present in soil and groundwater within the Subject Property. Additional environmental investigations were recommended to characterize the presence or absence of contamination where the potential was moderate or high. **Figure 3** illustrates the properties within the Study Area that are identified as either a high or moderate potential for contamination.

The land use of the Subject Property will not be changing through the planned construction of a new pedestrian bridge. Therefore, the submission of a Record of Site Condition (RSC) to the Ministry of the Environment and Climate Change (MOECC), as regulated by Ontario Regulation (O. Reg.) 153/04 made under the Environmental Protection Act, is not mandatory and this Phase One ESA was conducted in accordance with the Canadian Standards Association (CSA) standard CSA Z768-01 (R2012) for Phase One ESA. This standard is in general accordance with O. Reg. 153/04 and is accepted by review agencies for the evaluation of environmental conditions at properties where the filing of a RSC is not required.

The scope of work included the following:

- ◆ Review historical environmental reports relating to the Subject Property;
- ◆ Review of historical aerial photographs available through the City of Toronto online archives and satellite imagery from Google Earth™. The aerial photographs were used to assist in the determination of the first developed use for the Subject Property, identify structures and buildings, and provide information with respect to changes in land use over time;
- ◆ Review of topographic, geologic, and physiographic maps for the Subject Property. These sources were reviewed to obtain information regarding the stratigraphy of the overburden and the depth and type of bedrock;
- ◆ Review of available information from the Ontario MOECC and other regulatory agencies (i.e., Technical Standards and Safety Authority (TSSA)), through the Freedom of Information and Protection of Privacy Act. These sources can provide information regarding the presence of fuel storage tanks, approval, permits, Certificates of Approval, MOECC administrative orders (such as control orders, stop orders, remedial orders), and reports submitted to the MOECC;
- ◆ Review of database information from EcoLog Environmental Risk Information Services Ltd. (ERIS). The comprehensive databases provided information with respect to above and underground storage tanks, waste disposal sites, polychlorinated biphenyl (PCB) storage information, water well inventories, compliance, convictions and spills, incidents recorded in the National Pollutant Release Inventory, the Inventory of Coal Gasification Plants, notices and instruments including RSCs, and landfill information. Additionally, to supplement the ERIS data, water well records were acquired through publicly accessible MOECC databases;
- ◆ Review of city directories and fire insurance plans (FIPs). This information was used to assess the historical presence of fuel storage tanks, industrial activities and development at the Subject Property;
- ◆ Visual inspection of the Subject Property and adjacent properties within the Study Area to assess current conditions and evaluate the potential for impacts to soil and groundwater at the Subject Property. Adjacent properties were assessed from publicly accessible boundaries to evaluate the potential for environmental impacts to the Subject Property. Photographs were taken to support pertinent observations;
- ◆ Conduct interviews with current owners to confirm site operations and development history of the Subject Property. It should be noted that no persons with historical knowledge of the Subject Property were made available for an interview and as such no interview was conducted;
- ◆ Prepare a Phase One ESA report documenting the findings, conclusions and recommendations for the evaluation of possible contamination of soil and groundwater at the Subject Property.

## **3.0 RECORDS REVIEW**

### **3.1 General**

#### **3.1.1 Phase One Study Area Determination**

The Study Area included the Subject Property and properties/areas within 250 m from the limits of the Subject Property. As the land use beyond the Study Area is similar in nature (i.e., consists mainly of commercial and residential properties), the Study Area was not extended beyond this distance. The Study Area is shown on the site plan provided on **Figure 2**.

### 3.1.2 First Developed Use Determination

Based on the review of the 1884 Fire Insurance Plan (FIP), obtained from the City of Toronto online archives, the first developed use of the Subject Property included the construction of a bridge, located in the same area as the current bridge, with residential and commercial buildings located in the southern portion of the Subject Property. Municipal roads such as Glen Road, Howard Street and Maple Avenue appear in the 1884 FIP. Earlier records were not available to confirm the exact date prior to 1884 at which the land of the Subject Property was developed. FIPs are included in **Appendix B**.

### 3.1.3 Fire Insurance Plans

A search of available FIPs through the City of Toronto online archives identified documentation from 1884, 1894, 1903, 1913 and 1924. The FIPs were reviewed to identify historical land uses with the potential for soil and groundwater contamination.

- ◆ 1884: Residential and/or commercial buildings are present, predominantly in the south to southwest portion of the Study Area. The municipal roads including Bloor Street East, Sherbourne Street, Glen Road, Maple Avenue, Dale Avenue and Howard Street were present. There is a bridge present in the same location as the current bridge. Rosedale Valley Road did not exist at the time;
- ◆ 1894: Increased residential and/or commercial developments in the north portion of the Study Area;
- ◆ 1903: No significant increases in development apparent in the 1903 when compared to the 1894 FIP;
- ◆ 1913: Rosedale Valley Road has been built. Residential and/or commercial developments are clearly visible within the Study Area;
- ◆ 1924: The Study Area remained largely unchanged since 1913.

### 3.1.4 City Directory Search

A city directory search was conducted by LGI Copy Services Canada for the Study Area on a five/ten year time interval between the years 1906 to 1999. The results of the city directory search were evaluated and businesses with operations regarded as having the high potential to contribute to subsurface contamination were included in **Table 1**. The complete city directory search documentation is included in **Appendix B**.

**Table 1: Summary of City Directory Search**

Property	Owner/Tenant	Years Active
366 Bloor Street East	Capital Cleaners Ltd.	1999
441 Bloor Street East	Toronto Fire Department	1970-1999
5 Howard Street	Ambassador Cleaners	1931-1999
565-610 Sherbourne Street	Yogi Cleaners	1995
565-610 Sherbourne Street	Taylor's Cleaners and Launderers	1985/86- 1990
17 Howard Street	Howard Dry Cleaning	1990-1995
417 Bloor Street East	Rosedale Cleaners & Dryers	1941-1960

Property	Owner/Tenant	Years Active
407 Bloor Street East	Spick & Span Cleaners	1946-1960
29 Howard Street	Chu Sing Laundry and Chinese Laundry	1906-1960

Results of the city directory indicated several properties within the Study Area have been historically used as dry cleaning facilities. Chlorinated solvents are typically associated with dry cleaning facilities.

### 3.1.5 Previous Environmental Reports

A request was made to the City of Toronto for any environmental reports or investigations available for the Study Area. The purpose of this review was to collect information on past activities that could have contributed to any site contamination.

To date, no response has been received from the City of Toronto.

## 3.2 Environmental Source Information

### 3.2.1 Databases

The ERIS report provides information from federal, provincial, and private source databases relating to a defined search area. Each database is divided into records that present information such as company names, addresses, descriptions, status, and other pertinent information. ERIS completed their search for records within 250 m of the Subject Property.

**Appendix B** contains the complete EcoLog database report. The search of the EcoLog databases complies with the requirements for documentation identified in O. Reg. 153/04 and the CSA standard. **Table 2** provides a summary of the EcoLog databases search.

**Table 2: EcoLog Search Results**

Database	Name	Onsite	Within 250 m

VAR	TSSA Variances for abatement of Underground Storage Tanks	0	1
WWIS	Water Well Information System	0	7
	<b>TOTAL</b>	2	269

Based on the Ecolog ERIS databases two (2) records for boreholes were identified on the Subject Property and two hundred and sixty nine (269) records were identified within a 250 m distance of the Subject Property. A detailed description of all the records can be found in **Appendix B**. A description of the records within the Study Area that may have resulted in environmental impacts to the Subject Property is provided below:

- ◆ One (1) record of commercial fuel oil tank related to an oil tank installed in 1985 at 5 Dale Avenue, northeast of the Subject Property;
- ◆ One (1) record for a fuel storage tank at a City of Toronto Fire station. This single wall UST was installed in 1990 at 441 Bloor Street East, adjacent to the southwest of the Subject Property;
- ◆ Two (2) records of historical fuel storage tanks for the Toronto Fire station at 441 Bloor Street East;
- ◆ Eighty seven (87) records for Ontario Regulation 347 Waste Generator Summary within the Study Area. These records belong to properties located at 345, 365, 387, 421, 441 Bloor Street East, 40, 45, 55 Glen Road, 565, 592, 600, 606, 619 and 633 Sherbourne Street, 1A Dale Avenue, 35 Howard Street and 25 Linden Street, and the waste materials are described as oil skimming and sludges, pathological wastes, light fuels, photo processing wastes and PCBs. The list of the properties generating the waste materials is included in the Ecolog ERIS in **Appendix B**;
- ◆ Two (2) records of TSSA historical incidents with both of these records related to natural gas releases from pipeline incidents at construction sites. The sites were at 35 Maple Avenue and the intersection of Maple Avenue and Powell Avenue, both located northeast of the Subject Property;
- ◆ Three (3) records of TSSA incidents also related to releases of vapours due to pipeline incidents at properties located at 16 Glen Road, 345 Bloor Street East (both southwest of the Subject Property) and 35 Maple Avenue located in the northeast of the Subject Property.
- ◆ Five (5) records of national PCB inventories all of which are for a property at 365 Bloor Street East, southwest of the Subject Property.
- ◆ Four (4) records for pesticide registration with two (2) of these records for National Grocers Co. Ltd. at 345 Bloor Street East and Shoppers Drug Mart, at 40-565 Sherbourne Street. The other two (2) records are for Tara Breckenridge Pharmacy Ltd located at 565 Sherbourne Street;
- ◆ One (1) record for a private and retail fuel storage tank for the fire station at 441 Bloor Street East;
- ◆ Six (6) records of site condition for 1570710 Ontario Limited located at 395, 401 and 403 Bloor Street East, 2262814 Ontario Limited located at 387 Bloor Street East, James Cooper

Mansion Inc. located at 28 Linden Street and 582 Sherbourne Street as well as 712953 Ontario Limited located at 555-556 Sherbourne Street;

- ◆ Twenty one (21) records for Scott's Manufacturing Directory within the Study Area. These records were for properties at 345, 365, 421 and 425 Bloor Street East, 600 Sherbourne Street, 20 Dale Avenue, 21 Maple Avenue, 77 Howard Street, 9 Selby Street and 25 Elm Street. The manufacturers included in this directory are related to book and magazine publishing and printing as well as the manufacturing of medical instruments and signs.
- ◆ Six (6) records for spills with five of these records related to natural gas releases to the air and the sixth related to a fuel oil spill at 400 Bloor Street East;
- ◆ Thirty two (32) records for Anderson Storage Tanks for fuel oil tanks at 14, 41, 46, 57, 60 and 64 Glen Road, 4, 9, 599 and 611 Sherbourne Street, 5 and 9 Dale Avenue, 7, 12, 31, 33, 35, 37, 39, 40, 46, 47, 62 Maple Avenue, 78 and 100 Howard Street, 597 Bloor Street East, 15 Powell Avenue and 25 Elm Avenue;
- ◆ One (1) record for TSSA variances for abandonment of an UST at 40 Glen Road, located adjacent to the northwest of the Subject Property;
- ◆ There are seven (7) records for wells installed within the Study Area with three (3) records for monitoring and test holes and no usage indicated for the other four wells.

### 3.2.2 Regulatory Information

A request was made to the MOECC for information the Spills Action Centre, Investigations and Enforcement Branch, Environmental Assessment and Approvals Branch, and the Environmental Monitoring and Reporting Branch may have on record pertaining to the properties located at 441 Bloor Street East and 40 Glen Road which have been considered as areas with high potential for environmental concern. To date, no response has been received from the MOECC.

A request for information was also made to the TSSA for any details related to the presence and operation of fuel storage tanks at 441 Bloor Street East and 40 Glen Road. The TSSA response identified one steel, single walled UST with a capacity of 2,274 litres of fuel at 441 Bloor Street East. Documentation provided by the TSSA suggests that regular maintenance and monitoring of the UST is undertaken on the property, however the TSSA also indicated they have limited information of private fuel outlets. Information received from the TSSA is included in **Appendix B**.

No information pertaining to the TSSA variance at 40 Glen Road was provided.

## 3.3 Physical Setting Sources

### 3.3.1 Aerial Photographs

Aerial photographs obtained from the City of Toronto online archives were reviewed for the years 1953, 1964, 1971, 1981 and 1992. In addition, satellite imagery from Google Earth™ for 2002 was reviewed. Aerial photographs were reviewed to identify APECs within the Study Area and are presented in **Appendix A**. A summary of the aerial photograph information is presented in **Table 3**.

**Table 3: Aerial Photograph Interpretation**

Year/ Scale	Activities on Subject Property	Adjacent Properties	Possible Contaminants
1953	Bloor Street East,	North- Predominantly occupied by	Petroleum hydrocarbons

Year/ Scale	Activities on Subject Property	Adjacent Properties	Possible Contaminants
	Rosedale Valley Road and Sherbourne Street are visible within the Study Area. In addition a bridge crossing the Rosedale Valley Road from north to south appears to be present at the Subject Property.	residential and/or commercial properties; East- Rosedale Valley Road with forested areas; West- Rosedale Valley Road with forested areas. Residential and/or commercial properties present mainly to west end of the Study Area; South- Predominantly occupied by residential and/or commercial properties. The fire station building currently present adjacent to the southwest portion of the Subject Property does not appear to be present.	from the use of heating oil products at the residential properties. Contaminants related to the use of road salt along the roadways.
1964	Disturbed vacant land appears to be present south of Bloor Street East.	North- A large building has been constructed adjacent to the northwest portion of the Subject Property. Land located northeast of Subject Property has been cleared (deforested). East- Same as above; West- Commercial developments are visible to the west end of the Study Area, south of Bloor Street East; South- Disturbed land is visible adjacent to the southwest of the Subject Property. Buildings appear to have been demolished in this area since the 1953 aerial photograph.	Same as above.
1971	Land development in the south portion of the Subject Property.	North- Same as above; East- Same as above; West- Same as above; South- A building has been built adjacent to the southwest of the Subject property and the disturbed land identified in 1964 aerial photo is not visible. It is assumed that this building is the current fire station.	Petroleum hydrocarbons related to the storage and use of fuel associated with the operation of the fire station.
1981	Same as above	North- The open land adjacent to the northeast of the Subject Property appears to have overgrown with vegetation; East- Same as above; West- Commercial properties appear to be developed to the southwest of Sherbourne Street and Bloor Street East intersection; South- Same as above.	Same as above.
1992	Same as above	North- Same as above;	Same as above.

Year/ Scale	Activities on Subject Property	Adjacent Properties	Possible Contaminants
		East- Same as above; West- Same as above; South- a building is visible to the southeast of Sherbourne Street and Bloor Street intersection.	
2002	Same as above	North- Same as above; East- Same as above; West- Same as above; South- Same as above with additional commercial developments.	Same as above.

### 3.3.2 Topography, Hydrology, Geology

#### **Topography**

Topographic mapping available through the Natural Resources of Canada Website (<http://atlas.nrcan.gc.ca>) was reviewed. Topographic map sheet 30M11 of the National Topographic Database at a scale of 1:15,000 was accessed to review topographic features in the general vicinity of the Study Area.

The surface topography of the Study Area slopes to the south, approximately 114 metres above sea level (masl) in the northeastern portion of the Study Area near the intersection of Elm Avenue and Glen Road, to approximately 100 masl in the southwestern portion of the Study Area near the intersection of Sherbourne Street and Howard Street. A tributary of an unknown creek is present to the north and northeast of the Study Area (outside of the Study Area).

The principal direction of regional groundwater flow is inferred to be south towards Lake Ontario approximately 3.5 km from the Subject Property. It should be noted that local groundwater flow may be influenced by underground utilities (i.e., service trenches), building structures and the topographic differences of the Rosedale Valley Ravine. For example, the gravel pack used around utilities, such as underground utilities, can act as interceptors and redirect groundwater flow along the direction of the pipe.

#### **Surficial Geology**

Typical deposits found within the Study Area consist of fine and coarse-textured glaciolacustrine deposits (Ontario Geological Survey, 2010). Based on this description, the surficial soil is likely to have variable permeability, which would result in variable groundwater flow rates. The thickness of the overburden within the Study Area ranges between 27 and 32 m (Gao et al, 2006).

#### **Bedrock Geology**

Bedrock within the Study Area consists of shale, limestone, dolostone and siltstone of the Georgian Bay Formation, Blue Mountain Formation, Billings Formation, Collingwood Member, Eastview Member (Ontario Geological Survey, 2011).

#### **Physiography**

The Study Area is situated within the Iroquois Plain physiographic region of Southern Ontario, which is a lowland region bordering Lake Ontario. This region is characteristically flat and was

formed by the inundation of Lake Iroquois, a body of water that existed during the late Pleistocene period (Chapman, L.J and Putnam, D.F., 2007). The Physiographic Landforms within the Study Area include Sand Plains, with a band of Beach deposits.

### **3.3.3 Fill Materials**

No evidence of stockpiled fill materials or waste debris was identified during the site reconnaissance. The ERIS report, included in **Appendix B**, did not identify the presence of any closed or active landfills within the Study Area.

### **3.3.4 Well Records**

Water well records were obtained from the MOECC for the Study Area. A total of 10 water well records were identified, all of which are monitoring / observation wells.

Based on the identified records, the general stratigraphy within the Study Area is as follows:

- ◆ Brown sand fill to depths between 0.3 and 2.4 metres below ground surface (mbgs);
- ◆ Brown and grey sand and silt between 2.4 and 30 mbgs;
- ◆ Grey clay and silt.

Information pertaining to the static water levels within the Study Area was not available.

## **4.0 INTERVIEWS**

An interview was not completed as part of this Phase One ESA.

## **5.0 SITE RECONNAISSANCE**

### **5.1 General Site Conditions**

Properties within the Study Area were assessed from publicly accessible areas to document current conditions and evaluate the potential for environmental impacts to soil and groundwater. Photographs were taken to support pertinent observations.

It should be noted that the inspection did not include building inspections or comprehensive exterior inspections of the properties in the Study Area. Therefore, any inferences regarding the presence or absence of site contamination is strictly based on visual observations made from the roadside.

On June 6, 2016 between the hours of 11:00 AM and 4:00 PM, Sanam Rahmanian, an Environmental Scientist with MMM, visited the Study Area and conducted the site reconnaissance. The Study Area was assessed in a systematic manner by driving or walking around the Study Area and recording visual and olfactory observations that were noted from publicly accessible lands. The purpose of the inspection was to document land uses and/or business operations, which may represent a potential source of contamination within the Study Area (e.g., gas stations, auto repair facilities, industrial operations). The weather at the time of the site visit was sunny and a temperature of approximately 21°C. Photographs documenting current site conditions are presented on **Figure 3**, which identify (Areas of Potential Environmental Concerns) APECs.

## 5.2 Adjacent Lands

Current land use within the Study Area is predominantly residential and/or commercial. Residential areas are present mainly in the northern portion of the Study Area, between the intersection of Glen Road and Dale Avenue and the northern end of the Study Area, shown on **Figure 2**. The commercial land uses are predominantly present to the south portion of the Study Area, south of Bloor Street East and the intersection of Sherbourne Street and Bloor Street East, along Sherbourne Street. These commercial facilities include, but are not limited to, restaurants, offices, coffee shops, clinics and a bank.

The Sherburne subway station is southwest of the Subject Property and a fire station is on the south side of Bloor Street East, adjacent to the Subject Property.

Commercial businesses including a dry cleaning facility are present on Howard Street, south of the Subject Property, near the Sherburne Street intersection. The other commercial facilities on Howard Street consist of a convenience store, an office and a take-out restaurant.

## 5.3 Specific Observations at the Subject Property

The land use and site activities on the Subject Property and the properties within the Study Area were examined to determine if potentially contaminating activities (PCAs) are present within the Subject Property.

The Subject Property includes the existing Glen Road pedestrian bridge and the areas surrounding the bridge as shown on **Figure 2**. The Glen Road pedestrian bridge spans across the Rosedale Ravine Lands and extends from Bloor Street East in the south to Glen Road in the north. The pedestrian bridge connects to a short tunnel which runs underneath Bloor Street East and connects to Glen Road to the south. At the southern limit of the bridge there is access to the Sherbourne subway station.

The main municipal roads at the Subject Property include Rosedale Valley Road and Bloor Street East. The area to the south of Rosedale Valley Road, beneath the pedestrian bridge, is covered by trees.

It should be noted that no PCAs were located within the Subject Property. The APECs identified in this ESA pertain to PCAs on properties within the Study Area, located close to the boundaries of the Subject Property. These PCAs have been regarded as having a potential to impact the soil and/or groundwater quality within the Subject Property.

## 6.0 REVIEW AND EVALUATION OF INFORMATION

APECs have been identified in the Study Area where potential environmental contamination may be present and have been categorized by assessing the overall relative potential of contamination from the APECs to result in an environmental liability at the Subject Property. The findings presented in Section 3.0 through Section 5.0 have been considered in assigning a category to the APECs.

### APECs with High Potential for Contamination

Two APECs are considered to have a high potential for contamination to have migrated from their location within the Study Area to the Subject Property, because the contaminant is recognized to be mobile in the environment and the location is either adjacent to or upgradient of the Subject Property. The APECs are described as follows:

- ◆ 441 Bloor Street East is adjacent to the southwest boundary of the Subject Property. The Ecolog ERIS report indicated there are records of historical private USTs used for fuel storage, installed in 1990 and remaining in use as of 2008, the date of the last updated record. The database search also identified this property as a registered generator of subject wastes, including oil skimmings, sludges and light fuels. The property is occupied by a City of Toronto fire station and the noted activities are likely associated with the maintenance and re-fuelling of fire vehicles. Fuelling operations are potential sources of contamination and because this property is located adjacent to the southwest limit of the Subject property, it is considered to be a high potential for contamination.
- ◆ 40 Glen Road, adjacent to the northwest boundary of the Subject Property was identified through a record of a TSSA Variance indicating that a UST was abandoned at this property and the Ecolog ERIS report also indicates that the property registered as a generator of light fuels in 2009. No information was available regarding the variance that was issued to allow the UST to be abandoned in place. Storage and use of fuels is a potential source of contamination, and because this property is adjacent and upgradient to the Subject Property it is considered a high potential for contamination.

### **APECs with Moderate Potential for Contamination**

One APEC was identified to have a moderate potential for contamination on the Subject Property based on the activity and distance to the Subject Property. The APEC is described as the following:

- ◆ 1A Dale Avenue is adjacent to the northeast boundary of the Subject Property and is reported as a registered waste generator of light fuels from 2006 to 2008. Based on the historical uses at this address, the waste may have been associated with previous construction operations at the multi-tenant residential building. The use of fuels in quantities that generated waste is a potential source of contamination with a moderate potential to have migrated to the Subject Property.

### **APECs with Low Potential for Contamination**

APECs identified as having a low potential for contamination of the Subject Property are as follows:

- ◆ Historical fuel oil tanks, dated 1927 and 1928, were reported by Ecolog ERIS to be present at 14, 41 and 46 Glen Road. Any historical fuel oil spills from the filling/operation of the tank may have contributed to possible subsurface contamination within the limits of the Subject Property. Based on the age of the tanks there is the potential that any subsurface contamination related to the historical operation of the fuel oil tanks may have been remediated through subsequent land developments and as such these properties are considered to be of low potential for contamination.
- ◆ Roadways, right-of-ways, parking lots or other open space/vacant areas that may have been subjected to the use of road salt but are not otherwise suspected to contribute to subsurface contamination.
- ◆ Several existing or historical dry cleaning facilities within the Study Area. Dry cleaning facilities generally represent a high potential for environmental contamination. Our review indicated that these operations were in the inferred downgradient direction of groundwater (and therefore contaminant) flow or were distant from the Subject Property. Because of these factors, the activity of dry cleaning that would normally result in a high concern was categorized as being an APEC with low potential for contamination.

## 7.0 CONCLUSIONS AND RECOMMENDATIONS

Based on the records review and reconnaissance, the following conclusions and recommendations are provided:

- ◆ A review of historical and current records and land uses identified activities and operations within the Study Area, but not within the Subject Property. These were considered as APECs and based on the nature of potential contaminants and proximity to the Subject Property, APECs were categorized as having high, moderate or low potential for contamination;
- ◆ Two APECs with high potential for contamination were identified immediately adjacent to the Subject Property, at 441 Bloor Street East and 40 Glen Road.
  - ◆ The City of Toronto fire station at 441 Bloor Street East has a record of a private fuel storage tank and is a registered waste generator. The use and storage of fuel at an adjacent property represents a high potential for contamination.
  - ◆ According to the EcoLog ERIS report, the property at 40 Glen Road has a record for a TSSA Variance, indicating that a fuel storage tank has been abandoned in place on the property. The presence of abandoned fuel storage tanks represents a high potential for contamination.
- ◆ One APEC with moderate potential for contamination was identified within the Study Area.
  - ◆ According to the EcoLog ERIS report, the property at 1A Dale Avenue was registered as a generator of light fuels from the period of 2006 to 2008. The use of fuels is a recognized source of contamination, however because this property is not located within or immediately adjacent to the Subject Property it has been categorized as a moderate potential for contamination.
- ◆ High and moderate APECs are located adjacent to or near the Subject Property. As such, a subsurface investigation, including chemical analysis of soil and groundwater, is recommended to be completed in areas of future bridge foundations to define the environmental conditions that may be encountered during construction (for the purpose of health and safety) and to support excess material management.

## 8.0 ASSESSOR QUALIFICATIONS

The Phase One ESA report was reviewed by Carolyn I. Adams, M.A.Sc., P.Eng., Manager of Environmental Management. She is a chemical engineer with 26 years of experience in the conduct of environmental investigations. She is a registered Qualified Person under Ontario Regulation 153/04 and has conducted hundreds of Phase One and Phase Two ESAs at industrial, commercial and residential properties. She has the experience and knowledge to identify PCAs based on current and historical land use.

The Phase One ESA was managed and reviewed by Sarah Murray, B.Sc. (Env.), C.E.T. Sarah has eight years' experience working with MMM in the Environmental Management Department successfully fulfilling the role of project manager, field/project coordinator, mentor to junior field staff, and field technician. Sarah has experience completing numerous Phase One and Two Environmental Site Assessments, Designated Substance and Hazardous Material Surveys, water well surveys, hydrogeological investigations, contaminant remediation projects involving bulk material disposals, groundwater treatment and in-situ injections, as well as excess soil management during construction projects.

Site reconnaissance and reporting was completed by Ms. Sanam Rahmanian, M.Sc. Sanam Rahmanian is an Environmental Scientist in MMM Group's Environmental Management Department, she has more than five years of experience completing environmental investigations for private-and public-sector clients. She has provided expertise to numerous investigations including brownfield remediation; environmental site assessment; designated substance surveys; groundwater monitoring; contamination overview studies, preliminary site assessments and landfill monitoring.

## 9.0 STANDARD LIMITATIONS

Standard limitations are presented in **Appendix C** as they apply to this report.

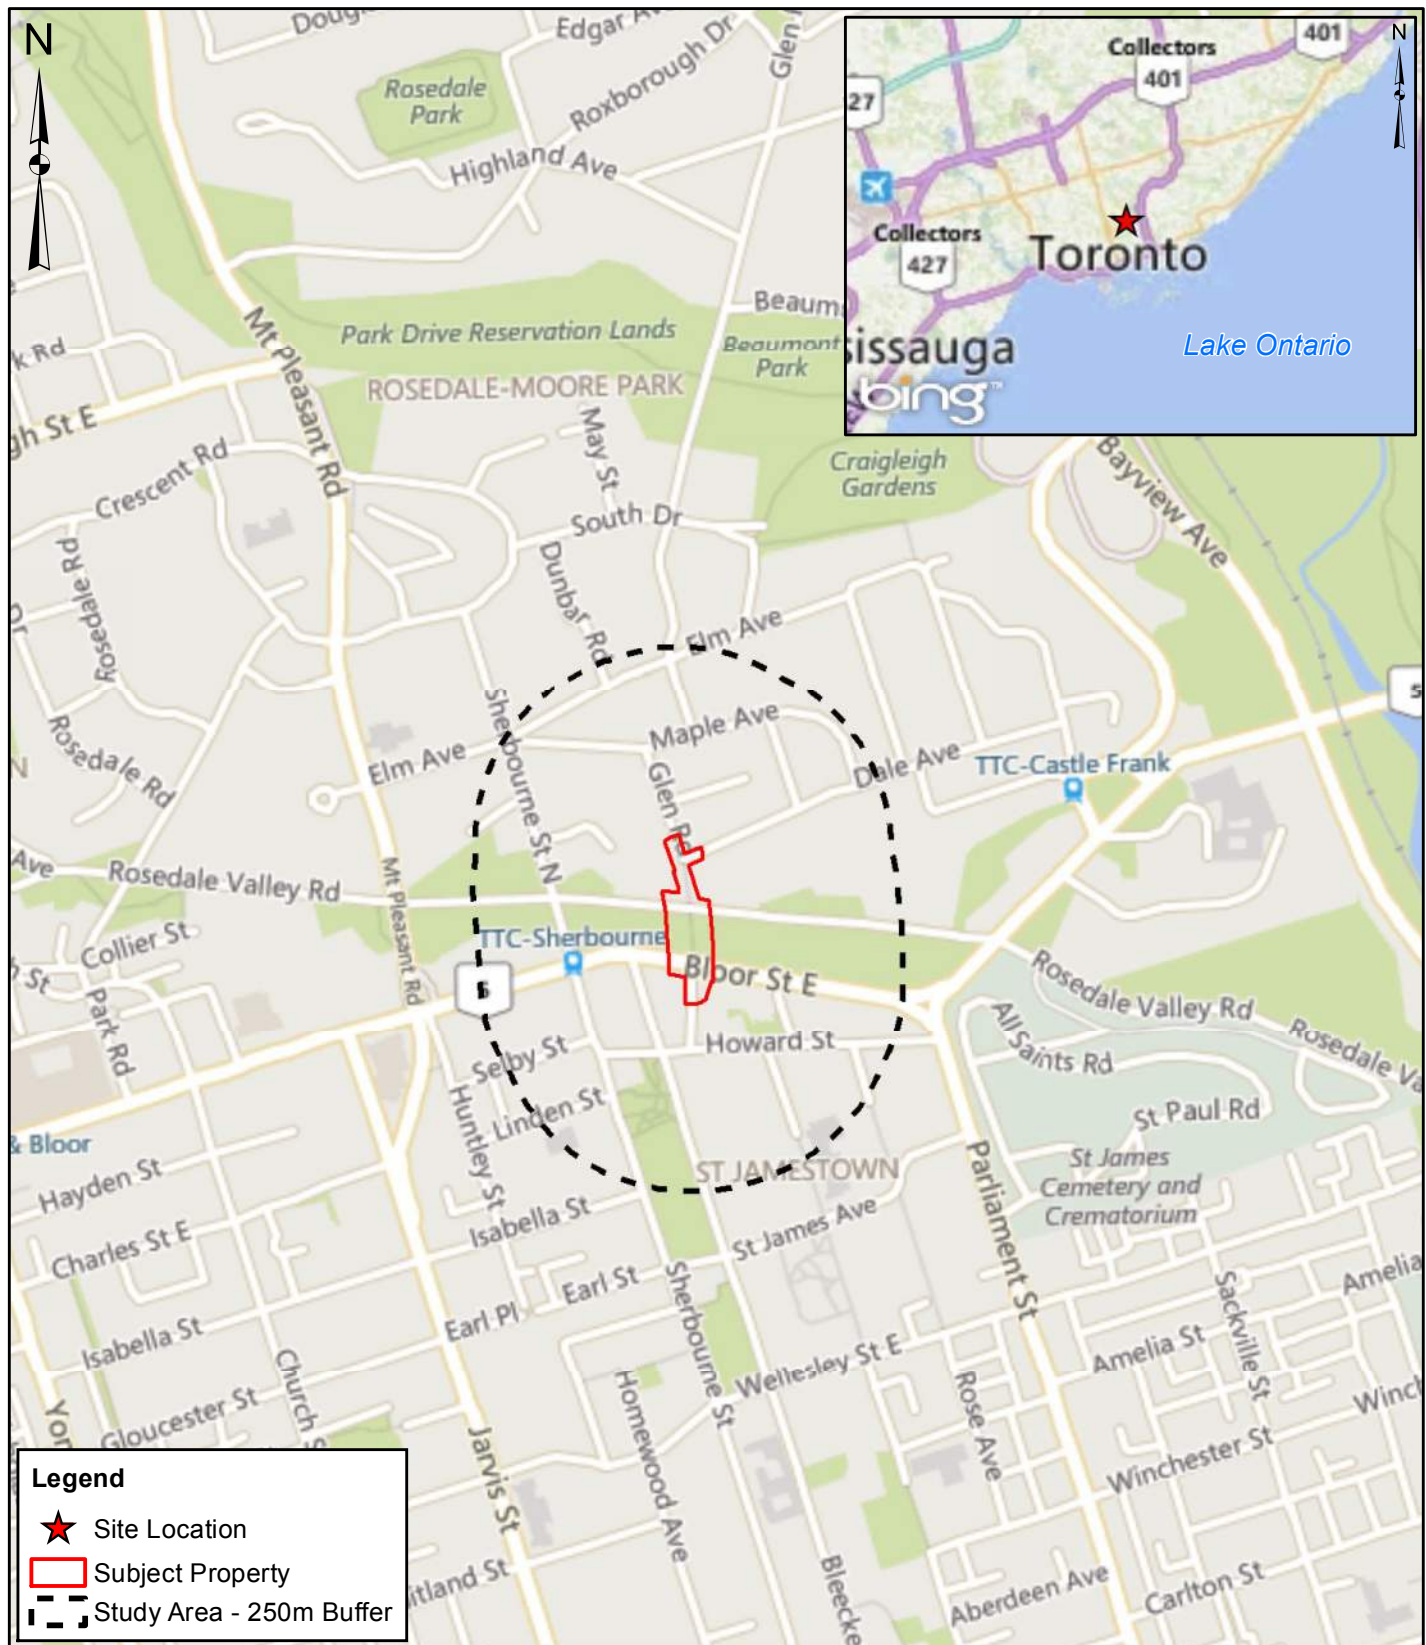

This report has been prepared for use The City of Toronto in accordance with generally accepted environmental investigation practices at the time of the assessment within the scope suggested by Canadian Standard Association's Phase I Environmental Site Assessment document (CSA Z768-01 – R2012).

## **Notice: IMPORTANT LIMITATIONS and YOUR LIABILITY**

**Reliance on information in Report:** This report DOES NOT replace a full Phase I Environmental Site Assessment but is solely intended to be used as a database review of environmental records.

**License for use of information in Report:** No page of this report can be used without this cover page, this notice and the project property identifier. The information in Report(s) may not be modified or re-sold.

**Your Liability for misuse:** Using this Service and/or its reports in a manner contrary to this Notice or your agreement will be in breach of copyright and contract and ERIS may obtain damages for such mis-use, including damages caused to third parties, and gives ERIS the right to terminate your account, rescind your license to any previous reports and to bar you from future use of the Service.

**No warranty of Accuracy or Liability for ERIS:** The information contained in this report has been produced by EcoLog Environmental Risk Information Services Ltd ("ERIS") using various sources of information, including information provided by Federal and Provincial government departments. The report applies only to the address and up to the date specified on the cover of this report, and any alterations or deviation from this description will require a new report. This report and the data contained herein does not purport to be and does not constitute a guarantee of the accuracy of the information contained herein and does not constitute a legal opinion nor medical advice. Although ERIS has endeavored to present you with information that is accurate, EcoLog ERIS disclaims, any and all liability for any errors, omissions, or inaccuracies in such information and data, whether attributable to inadvertence, negligence or otherwise, and for any consequences arising therefrom. Liability on the part of EcoLog ERIS is limited to the monetary value paid for this report.

**Trademark and Copyright:** You may not use the ERIS trademarks or attribute any work to ERIS other than as outlined above. This Service and Report(s) are protected by copyright owned by EcoLog ERIS Ltd. Copyright in data used in the Service or Report(s) (the "Data") is owned by EcoLog ERIS or its licensors. The Service, Report(s) and Data may not be copied or reproduced in whole or in any substantial part without prior written consent of EcoLog ERIS.

**Crown Brief No.:**  
**Ministry District:**  
**Region:**  
**Description:** On July 19, 2012, Joseph Robertson Foundries Limited pleaded guilty to one violation under the Environmental Protection Act for a discharge of used moulding sand, causing damage to property. The Court heard that the company operates a foundry in Toronto. The ministry received a complaint from a neighbour about black particulate on a vehicle and their property. The ministry collected samples that revealed the black material was moulding sand from the company. It was determined that holes in the sand elevator of a silo led to the discharge of the sand. The exterior paint on the complainant's car was damaged from the sand and required the vehicle to be re-painted. The company repaired the damaged equipment and cleaned up the accumulated sand on their facilities roof as requested by the ministry. The company was charged following an investigation by the ministry's Investigations and Enforcement Branch. The company was fined \$10,000 plus a victim fine surcharge and was given six months to pay the fine.

--- Details ---

**Date Charged:** July 19, 2012  
**Fine:** \$10,000

# Appendix: Database Descriptions

*EcoLog Environmental Risk Information Services Ltd (ERIS) can search the following databases. The extent of historical information varies with each database and current information is determined by what is publicly available to ERIS at the time of update. **Note:** Databases denoted with " \* " indicates that the database will no longer be updated. See the individual database description for more information.*

## **Abandoned Aggregate Inventory:**

Provincial [AAGR](#)

The MAAP Program maintains a database of all abandoned pits and quarries. Please note that the database is only referenced by lot and concession and city/town location. The database provides information regarding the location, type, size, land use, status and general comments.\*

*Government Publication Date: Sept 2002\**

## **Aggregate Inventory:**

Provincial [AGR](#)

The Ontario Ministry of Natural Resources maintains a database of all active pits and quarries. The database provides information regarding the registered owner/operator, location name, operation type, approval type, and maximum annual tonnage.

*Government Publication Date: Up to Mar 2015*

## **Abandoned Mine Information System:**

Provincial [AMIS](#)

The Abandoned Mines Information System contains data on known abandoned and inactive mines located on both Crown and privately held lands. The information was provided by the Ministry of Northern Development and Mines (MNDM), with the following disclaimer: "the database provided has been compiled from various sources, and the Ministry of Northern Development and Mines makes no representation and takes no responsibility that such information is accurate, current or complete". Reported information includes official mine name, status, background information, mine start/end date, primary commodity, mine features, hazards and remediation.

*Government Publication Date: 1800-Oct 2014*

## **Anderson's Waste Disposal Sites:**

Private [ANDR](#)

The information provided in this database was collected by examining various historical documents which aimed to characterize the likely position of former waste disposal sites from 1860 to present. The research initiative behind the creation of this database was to identify those sites that are missing from the Ontario MOE Waste Disposal Site Inventory, as well as to provide revisions and corrections to the positions and descriptions of sites currently listed in the MOE inventory. In addition to historic waste disposal facilities, the database also identifies certain auto wreckers and scrap yards that have been extrapolated from documentary sources. Please note that the data is not warranted to be complete, exhaustive or authoritative. The information was collected for research purposes only.

*Government Publication Date: 1860s-Present*

## **Automobile Wrecking & Supplies:**

Private [AUWR](#)

This database provides an inventory of known locations that are involved in the scrap metal, automobile wrecking/recycling, and automobile parts & supplies industry. Information is provided on the company name, location and business type.

*Government Publication Date: 2001-Jul 2014*

**Borehole:**Provincial [BORE](#)

A borehole is the generalized term for any narrow shaft drilled in the ground, either vertically or horizontally. The information here includes geotechnical investigations or environmental site assessments, mineral exploration, or as a pilot hole for installing piers or underground utilities. Information is from many sources such as the Ministry of Transportation (MTO) boreholes from engineering reports and projects from the 1950 to 1990's in Southern Ontario. Boreholes from the Ontario Geological Survey (OGS) including The Urban Geology Analysis Information System (UGAIS) and the York Peel Durham Toronto (YPDT) database of the Conservation Authority Moraine Coalition. This database will include fields such as location, stratigraphy, depth, elevation, year drilled, etc. For all water well data or oil and gas well data for Ontario please refer to WWIS and OOGW.

*Government Publication Date: 1875-Jul 2014*

**Certificates of Approval:**Provincial [CA](#)

This database contains the following types of approvals: Air & Noise, Industrial Sewage, Municipal & Private Sewage, Waste Management Systems and Renewable Energy Approvals. The MOE in Ontario states that any facility that releases emissions to the atmosphere, discharges contaminants to ground or surface water, provides potable water supplies, or stores, transports or disposes of waste, must have a Certificate of Approval before it can operate lawfully. Fields include approval number, business name, address, approval date, approval type and status. This database will no longer be updated, as CofA's have been replaced by either Environmental Activity and Sector Registry (EASR) or Environmental Compliance Approval (ECA). Please refer to those individual databases for any information after Oct.31, 2011.

*Government Publication Date: 1985-Oct 30, 2011\**

**Commercial Fuel Oil Tanks:**Provincial [CFOT](#)

Since May 2002, Ontario developed a new act where it became mandatory for fuel oil tanks to be registered with Technical Standards & Safety Authority (TSSA). This data would include all commercial underground fuel oil tanks in Ontario with fields such as location, registration number, tank material, age of tank and tank size.

*Government Publication Date: 1948-Dec 2015*

**Chemical Register:**Private [CHEM](#)

This database includes information from both a one time study conducted in 1992 and private source and is a listing of facilities that manufacture or distribute chemicals. The production of these chemical substances may involve one or more chemical reactions and/or chemical separation processes (i.e. fractionation, solvent extraction, crystallization, etc.).

*Government Publication Date: 1992, 1999-Jul 2014*

**Inventory of Coal Gasification Plants and Coal Tar Sites:**Provincial [COAL](#)

This inventory includes both the "Inventory of Coal Gasification Plant Waste Sites in Ontario-April 1987" and the Inventory of Industrial Sites Producing or Using Coal Tar and Related Tars in Ontario-November 1988) collected by the MOE. It identifies industrial sites that produced and continue to produce or use coal tar and other related tars. Detailed information is available and includes: facility type, size, land use, information on adjoining properties, soil condition, site operators/occupants, site description, potential environmental impacts and historic maps available. This was a one-time inventory.\*

*Government Publication Date: Apr 1987 and Nov 1988\**

**Compliance and Convictions:**Provincial [CONV](#)

This database summarizes the fines and convictions handed down by the Ontario courts beginning in 1989. Companies and individuals named here have been found guilty of environmental offenses in Ontario courts of law.

*Government Publication Date: 1989-Feb 2014*

**Certificates of Property Use:**Provincial [CPU](#)

This is a subset taken from Ontario's Environmental Registry (EBR) database. It will include all CPU's on the registry such as (EPA s. 168.6) - Certificate of Property Use.

*Government Publication Date: 1994-Jan 2016*

**Drill Hole Database:**Provincial [DRL](#)

The Ontario Drill Hole Database contains information on more than 113,000 percussion, overburden, sonic and diamond drill holes from assessment files on record with the department of Mines and Minerals. Please note that limited data is available for southern Ontario, as it was the last area to be completed. The database was created when surveys submitted to the Ministry were converted in the Assessment File Research Image Database (AFRI) project. However, the degree of accuracy (coordinates) as to the exact location of drill holes is dependent upon the source document submitted to the MNDM. Levels of accuracy used to locate holes are: centering on the mining claim; a sketch of the mining claim; a 1:50,000 map; a detailed company map; or from submitted a "Report of Work".

*Government Publication Date: 1886-Jun 2014*

**Environmental Activity and Sector Registry:**Provincial [EASR](#)

On October 31, 2011, a smarter, faster environmental approvals system came into effect in Ontario. The EASR allows businesses to register certain activities with the ministry, rather than apply for an approval. The registry is available for common systems and processes, to which preset rules of operation can be applied. The EASR is currently available for: heating systems, standby power systems and automotive refinishing. Businesses whose activities aren't subject to the EASR may apply for an ECA (Environmental Compliance Approval), Please see our ECA database.

*Government Publication Date: Oct 31 2011-Oct 2015*

**Environmental Registry:**Provincial [EBR](#)

The Environmental Registry lists proposals, decisions and exceptions regarding policies, Acts, instruments, or regulations that could significantly affect the environment. Through the Registry, thirteen provincial ministries notify the public of upcoming proposals and invite their comments. For example, if a local business is requesting a permit, license, or certificate of approval to release substances into the air or water; these are notified on the registry. Data includes: Approval for discharge into the natural environment other than water (i.e. Air) - EPA s. 9, Approval for sewage works - OWRA s. 53(1), and EPA s. 27 - Approval for a waste disposal site. For information regarding Permit to Take Water (PTTW), Certificate of Property Use (CPU) and (ORD) Orders please refer to those individual databases.

*Government Publication Date: 1994-Jan 2016*

**Environmental Compliance Approval:**Provincial [ECA](#)

On October 31, 2011, a smarter, faster environmental approvals system came into effect in Ontario. In the past, a business had to apply for multiple approvals (known as certificates of approval) for individual processes and pieces of equipment. Today, a business either registers itself, or applies for a single approval, depending on the types of activities it conducts. Businesses whose activities aren't subject to the EASR may apply for an ECA. A single ECA addresses all of a business's emissions, discharges and wastes. Separate approvals for air, noise and waste are no longer required. This database will also include Renewable Energy Approvals. For certificates of approval prior to Nov 1st, 2011, please refer to the CA database. For all Waste Disposal Sites please refer to the WDS database.

*Government Publication Date: Oct 31, 2011-Jun 2015*

**Environmental Effects Monitoring:**Federal [EEM](#)

The Environmental Effects Monitoring program assesses the effects of effluent from industrial or other sources on fish, fish habitat and human usage of fisheries resources. Since 1992, pulp and paper mills have been required to conduct EEM studies under the Pulp and Paper Effluent Regulations. This database provides information on the mill name, geographical location and sub-lethal toxicity data.

*Government Publication Date: 1992-2007\**

**ERIS Historical Searches:**Private [EHS](#)

ERIS has compiled a database of all environmental risk reports completed since March 1999. Available fields for this database include: site location, date of report, type of report, and search radius. As per all other databases, the ERIS database can be referenced on both the map and "Statistical Profile" page.

*Government Publication Date: 1999-Aug 2014*

**Environmental Issues Inventory System:**

Federal EIS

The Environmental Issues Inventory System was developed through the implementation of the Environmental Issues and Remediation Plan. This plan was established to determine the location and severity of contaminated sites on inhabited First Nation reserves, and where necessary, to remediate those that posed a risk to health and safety; and to prevent future environmental problems. The EIS provides information on the reserve under investigation, inventory number, name of site, environmental issue, site action (Remediation, Site Assessment), and date investigation completed.

*Government Publication Date: 1992-2001\**

**Emergency Management Historical Event:**

Provincial EMHE

The Emergency Management Historical Event data class will store the locations of historical occurrences of emergency events. Events captured will include those assigned to the Ministry of Natural Resources by Order-In-Council (OIC) under the Emergency Management and Civil Protection Act as well as events where MNR provided requested emergency response assistance. Many of these events will have involved community evacuations, significant structural loss, and/or involvement of MNR emergency response staff. These events fall into one of ten (10) type categories: Dam Failure; Drought / Low Water; Erosion; Flood; Forest Fire; Soil and Bedrock Instability; Petroleum Resource Center Event, EMO Requested Assistance, Continuity of Operations Event, Other Requested Assistance.

*Government Publication Date: May 31, 2014*

**List of TSSA Expired Facilities:**

Provincial EXP

This is a list of all expired facilities that fall under the TSSA (TSSA Act & Safety Regulations), including the six regulations that exist under the Fuels Safety Division. It will include facilities such as private fuel outlets, bulk plants, fuel oil tanks, gasoline stations, marinas, propane filling stations, liquid fuel tanks, piping systems, etc. These tanks have been removed and automatically fall under the expired facilities inventory held by TSSA.

*Government Publication Date: Current to Nov 2015*

**Federal Convictions:**

Federal FCON

Environment Canada maintains a database referred to as the "Environmental Registry" that details prosecutions under the Canadian Environmental Protection Act (CEPA) and the Fisheries Act (FA). Information is provided on the company name, location, charge date, offence and penalty.

*Government Publication Date: 1988-Jun 2007\**

**Contaminated Sites on Federal Land:**

Federal FCS

The Federal Contaminated Sites Inventory includes information on known federal contaminated sites under the custodianship of departments, agencies and consolidated Crown corporations as well as those that are being or have been investigated to determine whether they have contamination arising from past use that could pose a risk to human health or the environment. The inventory also includes non-federal contaminated sites for which the Government of Canada has accepted some or all financial responsibility. It does not include sites where contamination has been caused by, and which are under the control of, enterprise Crown corporations, private individuals, firms or other levels of government.

*Government Publication Date: June 2000-Oct 2015*

**Fisheries & Oceans Fuel Tanks:**

Federal FOFT

Fisheries & Oceans Canada maintains an inventory of aboveground & underground fuel storage tanks located on Fisheries & Oceans property or controlled by DFO. Our inventory provides information on the site name, location, tank owner, tank operator, facility type, storage tank location, tank contents & capacity, and date of tank installation.

*Government Publication Date: 1964-Sept 2003*

**Fuel Storage Tank:**

Provincial FST

The Technical Standards & Safety Authority (TSSA), under the Technical Standards & Safety Act of 2000 maintains a database of registered private and retail fuel storage tanks in Ontario with fields such as location, tank status, license date, tank type, tank capacity, fuel type, installation year and facility type.

*Government Publication Date: 2010-Nov 2015*

**Fuel Storage Tank - Historic:**Provincial [FSTH](#)

The Technical Standards & Safety Authority (TSSA), under the Technical Standards & Safety Act of 2000 maintains a database of registered private and retail fuel storage tanks in Ontario with fields such as location, tank status, license date, tank type, tank capacity, fuel type, installation year and facility type.

*Government Publication Date: Pre-Jan 2010\**

**Ontario Regulation 347 Waste Generators Summary:**Provincial [GEN](#)

Regulation 347 of the Ontario EPA defines a waste generation site as any site, equipment and/or operation involved in the production, collection, handling and/or storage of regulated wastes. A generator of regulated waste is required to register the waste generation site and each waste produced, collected, handled, or stored at the site. This database contains the registration number, company name and address of registered generators including the types of hazardous wastes generated. It includes data on waste generating facilities such as: drycleaners, waste treatment and disposal facilities, machine shops, electric power distribution etc. This information is a summary of all years from 1986 including the most currently available data. Some records may contain, within the company name, the phrase "See & Use..." followed by a series of letters and numbers. This occurs when one company is amalgamated with or taken over by another registered company. The number listed as "See & Use", refers to the new ownership and the other identification number refers to the original ownership. This phrase serves as a link between the 2 companies until operations have been fully transferred.

*Government Publication Date: 1986-May 2015*

**Greenhouse Gas Emissions from Large Facilities:**Federal [GHG](#)

List of greenhouse gas emissions from large facilities made available by Environment Canada. Greenhouse gas emissions in kilotonnes of carbon dioxide equivalents (kt CO<sub>2</sub> eq).

*Government Publication Date: Dec 31, 2013*

**TSSA Historic Incidents:**Provincial [HINC](#)

This database will cover all incidences recorded by TSSA with their older system, before they moved to their new management system. TSSA's Fuels Safety Program administers the Technical Standards & Safety Act 2000, providing fuel-related safety services associated with the safe transportation, storage, handling and use of fuels such as gasoline, diesel, propane, natural gas and hydrogen. Under this Act, TSSA regulates fuel suppliers, storage facilities, transport trucks, pipelines, contractors and equipment or appliances that use fuels. The TSSA works to protect the public, the environment and property from fuel-related hazards such as spills, fires and explosions. This database will include spills and leaks from pipelines, diesel, fuel oil, gasoline, natural gas, propane and hydrogen recorded by the TSSA.

*Government Publication Date: 2006-June 2009\**

**Indian & Northern Affairs Fuel Tanks:**Federal [IAFT](#)

The Department of Indian & Northern Affairs Canada (INAC) maintains an inventory of aboveground & underground fuel storage tanks located on both federal and crown land. Our inventory provides information on the reserve name, location, facility type, site/facility name, tank type, material & ID number, tank contents & capacity, and date of tank installation.

*Government Publication Date: 1950-Aug 2003\**

**TSSA Incidents:**Provincial [INC](#)

TSSA's Fuels Safety Program administers the Technical Standards & Safety Act 2000, providing fuel-related safety services associated with the safe transportation, storage, handling and use of fuels such as gasoline, diesel, propane, natural gas and hydrogen. Under this Act, TSSA regulates fuel suppliers, storage facilities, transport trucks, pipelines, contractors and equipment or appliances that use fuels. Includes incidents from fuel-related hazards such as spills, fires and explosions. This database will include spills and leaks from diesel, fuel oil, gasoline, natural gas, propane and hydrogen recorded by the TSSA.

*Government Publication Date: June 2009 - Nov 2015*

**Landfill Inventory Management Ontario:**Provincial [LIMO](#)

The Landfill Inventory Management Ontario (LIMO) database is updated every year, as the ministry compiles new and updated information. The inventory will include small and large landfills. Additionally, each year the ministry will request operators of the larger landfills complete a landfill data collection form that will be used to update LIMO and will include the following information from the previous operating year. This will include additional information such as estimated amount of total waste received, landfill capacity, estimated total remaining landfill capacity, fill rates, engineering designs, reporting and monitoring details, size of location, service area, approved waste types, leachate of site treatment, contaminant attenuation zone and more. The small landfills will include information such as site owner, site location and certificate of approval # and status.

*Government Publication Date: 2012***Canadian Mine Locations:**Private [MINE](#)

This information is collected from the Canadian & American Mines Handbook. The Mines database is a national database that provides over 290 listings on mines (listed as public companies) dealing primarily with precious metals and hard rocks. Listed are mines that are currently in operation, closed, suspended, or are still being developed (advanced projects). Their locations are provided as geographic coordinates (x, y and/or longitude, latitude). As of 2002, data pertaining to Canadian smelters and refineries has been appended to this database.

*Government Publication Date: 1998-2009\****Mineral Occurrences:**Provincial [MNR](#)

In the early 70's, the Ministry of Northern Development and Mines created an inventory of approximately 19,000 mineral occurrences in Ontario, in regard to metallic and industrial minerals, as well as some information on building stones and aggregate deposits. Please note that the "Horizontal Positional Accuracy" is approximately +/- 200 m. Many reference elements for each record were derived from field sketches using pace or chain/tape measurements against claim posts or topographic features in the area. The primary limiting factor for the level of positional accuracy is the scale of the source material. The testing of horizontal accuracy of the source materials was accomplished by comparing the plan metric (X and Y) coordinates of that point with the coordinates of the same point as defined from a source of higher accuracy.

*Government Publication Date: 1846-Apr 2013***National Analysis of Trends in Emergencies System (NATES):**Federal [NATE](#)

In 1974 Environment Canada established the National Analysis of Trends in Emergencies System (NATES) database, for the voluntary reporting of significant spill incidents. The data was to be used to assist in directing the work of the emergencies program. NATES ran from 1974 to 1994. Extensive information is available within this database including company names, place where the spill occurred, date of spill, cause, reason and source of spill, damage incurred, and amount, concentration, and volume of materials released.

*Government Publication Date: 1974-1994\****Non-Compliance Reports:**Provincial [NCPL](#)

The Ministry of the Environment provides information about non-compliant discharges of contaminants to air and water that exceed legal allowable limits, from regulated industrial and municipal facilities. A reported non-compliance failure may be in regard to a Control Order, Certificate of Approval, Sectoral Regulation or specific regulation/act.

*Government Publication Date: 1994-2013***National Defense & Canadian Forces Fuel Tanks:**Federal [NDFT](#)

The Department of National Defense and the Canadian Forces maintains an inventory of all aboveground & underground fuel storage tanks located on DND lands. Our inventory provides information on the base name, location, tank type & capacity, tank contents, tank class, date of tank installation, date tank last used, and status of tank as of May 2001. This database will no longer be updated due to the new National Security protocols which have prohibited any release of this database.

*Government Publication Date: Up to May 2001\**

**National Defense & Canadian Forces Spills:**

Federal

[NDSP](#)

The Department of National Defense and the Canadian Forces maintains an inventory of spills to land and water. All spill sites have been classified under the "Transportation of Dangerous Goods Act - 1992". Our inventory provides information on the facility name, location, spill ID #, spill date, type of spill, as well as the quantity of substance spilled & recovered.

*Government Publication Date: Mar 1999-Aug 2010*

**National Defence & Canadian Forces Waste Disposal Sites:**

Federal

[NDWD](#)

The Department of National Defence and the Canadian Forces maintains an inventory of waste disposal sites located on DND lands. Where available, our inventory provides information on the base name, location, type of waste received, area of site, depth of site, year site opened/closed and status.

*Government Publication Date: 2001-Apr 2007\**

**National Energy Board Wells:**

Federal

[NEBW](#)

The NEBW database contains information on onshore & offshore oil and gas wells that are outside provincial jurisdiction(s) and are thereby regulated by the National Energy Board. Data is provided regarding the operator, well name, well ID No./UWI, status, classification, well depth, spud and release date.

*Government Publication Date: 1920-Feb 2003\**

**National Environmental Emergencies System (NEES):**

Federal

[NEES](#)

In 2000, the Emergencies program implemented NEES, a reporting system for spills of hazardous substances. For the most part, this system only captured data from the Atlantic Provinces, some from Quebec and Ontario and a portion from British Columbia. Data for Alberta, Saskatchewan, Manitoba and the Territories was not captured. However, NEES is also a repository for previous Environment Canada spill datasets. NEES is composed of the historic datasets ' or Trends ' which dates from approximately 1974 to present. NEES Trends is a compilation of historic databases, which were merged and includes data from NATES (National Analysis of Trends in Emergencies System), ARTS (Atlantic Regional Trends System), and NEES. In 2001, the Emergencies Program determined that variations in reporting regimes and requirements between federal and provincial agencies made national spill reporting and trend analysis difficult to achieve. As a consequence, the department has focused efforts on capturing data on spills of substances which fall under its legislative authority only (CEPA and FA). As such, the NEES database will be decommissioned in December 2004.

*Government Publication Date: 1974-2003\**

**National PCB Inventory:**

Federal

[NPCB](#)

Environment Canada's National PCB inventory includes information on in-use PCB containing equipment in Canada including federal, provincial and private facilities. Federal out-of-service PCB containing equipment and PCB waste owned by the federal government or by federally regulated industries such as airlines, railway companies, broadcasting companies, telephone and telecommunications companies, pipeline companies, etc. are also listed. Although it is not Environment Canada's mandate to collect data on non-federal PCB waste, the National PCB inventory includes some information on provincial and private PCB waste and storage sites. Some addresses provided may be Head Office addresses and are not necessarily the location of where the waste is being used or stored.

*Government Publication Date: 1988-2008\**

**National Pollutant Release Inventory:**

Federal

[NPRI](#)

Environment Canada has defined the National Pollutant Release Inventory ("NPRI") as a federal government initiative designed to collect comprehensive national data regarding releases to air, water, or land, and waste transfers for recycling for more than 300 listed substances.

*Government Publication Date: 1993-2013*

**Oil and Gas Wells:**

Private

[OGW](#)

The Nickle's Energy Group (publisher of the Daily Oil Bulletin) collects information on drilling activity including operator and well statistics. The well information database includes name, location, class, status and depth. The main Nickle's database is updated on a daily basis, however, this database is updated on a monthly basis. More information is available at [www.nickles.com](http://www.nickles.com).

*Government Publication Date: 1988-2015*

**Ontario Oil and Gas Wells:**

Provincial OOGW

In 1998, the MNR handed over to the Ontario Oil, Gas and Salt Resources Corporation, the responsibility of maintaining a database of oil and gas wells drilled in Ontario. The OGSR Library has over 20,000+ wells in their database. Information available for all wells in the ERIS database include well owner/operator, location, permit issue date, and well cap date, license No., status, depth and the primary target (rock unit) of the well being drilled. All geology/stratigraphy table information, plus all water table information is also provide for each well record.

*Government Publication Date: 1800-Aug 2015*

**Inventory of PCB Storage Sites:**

Provincial OPCB

The Ontario Ministry of Environment, Waste Management Branch, maintains an inventory of PCB storage sites within the province. Ontario Regulation 11/82 (Waste Management - PCB) and Regulation 347 (Generator Waste Management) under the Ontario EPA requires the registration of inactive PCB storage equipment and/or disposal sites of PCB waste with the Ontario Ministry of Environment. This database contains information on: 1) waste quantities; 2) major and minor sites storing liquid or solid waste; and 3) a waste storage inventory.

*Government Publication Date: 1987-Oct 2004; 2012-Dec 2013*

**Orders:**

Provincial ORD

This is a subset taken from Ontario's Environmental Registry (EBR) database. It will include all Orders on the registry such as (EPA s. 17) - Order for remedial work, (EPA s. 18) - Order for preventative measures, (EPA s. 43) - Order for removal of waste and restoration of site, (EPA s. 44) - Order for conformity with Act for waste disposal sites, (EPA s. 136) - Order for performance of environmental measures.

*Government Publication Date: 1994-Jan 2016*

**Canadian Pulp and Paper:**

Private PAP

This information is part of the Pulp and Paper Canada Directory. The Directory provides a comprehensive listing of the locations of pulp and paper mills and the products that they produce.

*Government Publication Date: 1999, 2002, 2004, 2005, 2009*

**Parks Canada Fuel Storage Tanks:**

Federal PCFT

Canadian Heritage maintains an inventory of known fuel storage tanks operated by Parks Canada, in both National Parks and at National Historic Sites. The database details information on site name, location, tank install/removal date, capacity, fuel type, facility type, tank design and owner/operator.

*Government Publication Date: 1920-Jan 2005\**

**Pesticide Register:**

Provincial PES

The Ontario Ministry of Environment maintains a database of all manufacturers and vendors of registered pesticides.

*Government Publication Date: 1988-Jun 2013*

**TSSA Pipeline Incidents:**

Provincial PINC

TSSA's Fuels Safety Program administers the Technical Standards & Safety Act 2000, providing fuel-related safety services associated with the safe transportation, storage, handling and use of fuels such as gasoline, diesel, propane, natural gas and hydrogen. Under this Act, TSSA regulates fuel suppliers, storage facilities, transport trucks, pipelines, contractors and equipment or appliances that use fuels. This database will include spills, strike and leaks from recorded by the TSSA.

*Government Publication Date: June 2009-2014*

**Private and Retail Fuel Storage Tanks:**

Provincial PRT

The Fuels Safety Branch of the Ontario Ministry of Consumer and Commercial Relations maintained a database of all registered private fuel storage tanks and licensed retail fuel outlets. This database includes an inventory of locations that have gasoline, oil, waste oil, natural gas and/or propane storage tanks on their property. The MCCR no longer collects this information. This information is now collected by the Technical Standards and Safety Authority (TSSA).

*Government Publication Date: 1989-1996\**

**Permit to Take Water:**Provincial [PTTW](#)

This is a subset taken from Ontario's Environmental Registry (EBR) database. It will include all PTTW's on the registry such as OWRA s. 34 - Permit to take water.

*Government Publication Date: 1994-Jan 2016*

**Ontario Regulation 347 Waste Receivers Summary:**Provincial [REC](#)

Part V of the Ontario Environmental Protection Act ("EPA") regulates the disposal of regulated waste through an operating waste management system or a waste disposal site operated or used pursuant to the terms and conditions of a Certificate of Approval or a Provisional Certificate of Approval. Regulation 347 of the Ontario EPA defines a waste receiving site as any site or facility to which waste is transferred by a waste carrier. A receiver of regulated waste is required to register the waste receiving facility. This database represents registered receivers of regulated wastes, identified by registration number, company name and address, and includes receivers of waste such as: landfills, incinerators, transfer stations, PCB storage sites, sludge farms and water pollution control plants. This information is a summary of all years from 1986 including the most currently available data.

*Government Publication Date: 1986-2013*

**Record of Site Condition:**Provincial [RSC](#)

The Record of Site Condition (RSC) is part of the Ministry of the Environment's Brownfields Environmental Site Registry. Protection from environmental cleanup orders for property owners is contingent upon documentation known as a record of site condition (RSC) being filed in the Environmental Site Registry. In order to file an RSC, the property must have been properly assessed and shown to meet the soil, sediment and groundwater standards appropriate for the use (such as residential) proposed to take place on the property. The Record of Site Condition Regulation (O. Reg. 153/04) details requirements related to site assessment and clean up.

RSCs filed after July 1, 2011 will also be included as part of the new (O.Reg. 511/09).

*Government Publication Date: 1997-Sept 2001, Oct 2004-Jan 2016*

**Retail Fuel Storage Tanks:**Private [RST](#)

This database includes an inventory of retail fuel outlet locations (including marinas) that have on their property gasoline, oil, waste oil, natural gas and / or propane storage tanks.

*Government Publication Date: 1999-Jul 2014*

**Scott's Manufacturing Directory:**Private [SCT](#)

Scott's Directories is a data bank containing information on over 200,000 manufacturers across Canada. Even though Scott's listings are voluntary, it is the most comprehensive database of Canadian manufacturers available. Information concerning a company's address, plant size, and main products are included in this database.

*Government Publication Date: 1992-Mar 2011\**

**Ontario Spills:**Provincial [SPL](#)

This database identifies information such as location (approximate), type and quantity of contaminant, date of spill, environmental impact, cause, nature of impact, etc. Information from 1988-2002 was part of the ORIS (Occurrence Reporting Information System). The SAC (Spills Action Centre) handles all spills reported in Ontario. Regulations for spills in Ontario are part of the MOE's Environmental Protection Act, Part X.

*Government Publication Date: 1988-Jun 2015*

**Wastewater Discharger Registration Database:**Provincial [SRDS](#)

Information under this heading is combination of the following 2 programs. The Municipal/Industrial Strategy for Abatement (MISA) division of the Ontario Ministry of Environment maintained a database of all direct dischargers of toxic pollutants within nine sectors including: Electric Power Generation; Mining; Petroleum Refining; Organic Chemicals; Inorganic Chemicals; Pulp & Paper; Metal Casting; Iron & Steel; and Quarries. All sampling information is now collected and stored within the Sample Result Data Store (SRDS).

*Government Publication Date: 1990-2013*

**Anderson's Storage Tanks:**

Private TANK

The information provided in this database was collected by examining various historical documents, which identified the location of former storage tanks, containing substances such as fuel, water, gas, oil, and other various types of miscellaneous products. Information is available in regard to business operating at tank site, tank location, permit year, permit & installation type, no. of tanks installed & configuration and tank capacity. Data contained within this database pertains only to the city of Toronto and is not warranted to be complete, exhaustive or authoritative. The information was collected for research purposes only.

*Government Publication Date: 1915-1953\**

**Transport Canada Fuel Storage Tanks:**

Federal TCFT

List of fuel storage tanks currently or previously owned or operated by Transport Canada. This inventory also includes tanks on The Pickering Lands, which refers to 7,530 hectares (18,600 acres) of land in Pickering, Markham, and Uxbridge owned by the Government of Canada since 1972; properties on this land has been leased by the government since 1975, and falls under the Site Management Policy of Transport Canada, but is administered by Public Works and Government Services Canada. This inventory provides information on the site name, location, tank age, capacity and fuel type.

*Government Publication Date: 1970-Mar 2007*

**TSSA Variances for Abandonment of Underground Storage Tanks:**

Provincial VAR

The TSSA, under the Liquid Fuels Handling Code and the Fuel Oil Code, all underground storage tanks must be removed within two years of disuse. If removal of a tank is not feasible, you may apply to seek a variance from this code requirement. This is a list of all variances granted for abandoned tanks.

*Government Publication Date: Current to Nov 2015*

**Waste Disposal Sites - MOE CA Inventory:**

Provincial WDS

The Ontario Ministry of Environment, Waste Management Branch, maintains an inventory of known open (active or inactive) and closed disposal sites in the Province of Ontario. Active sites maintain a Certificate of Approval, are approved to receive and are receiving waste. Inactive sites maintain Certificate(s) of Approval but are not receiving waste. Closed sites are not receiving waste. The data contained within this database was compiled from the MOE's Certificate of Approval database. Locations of these sites may be cross-referenced to the Anderson database described under ERIS's Private Source Database section, by the CA number. All new Environmental Compliance Approvals handed out after Oct 31, 2011 for Waste Disposal Sites will still be found in this database.

*Government Publication Date: 1970-Jun 2015*

**Waste Disposal Sites - MOE 1991 Historical Approval Inventory:**

Provincial WDSH

In June 1991, the Ontario Ministry of Environment, Waste Management Branch, published the "June 1991 Waste Disposal Site Inventory", of all known active and closed waste disposal sites as of October 30st, 1990. For each "active" site as of October 31st 1990, information is provided on site location, site/CA number, waste type, site status and site classification. For each "closed" site as of October 31st 1990, information is provided on site location, site/CA number, closure date and site classification. Locations of these sites may be cross-referenced to the Anderson database described under ERIS's Private Source Database section, by the CA number.

*Government Publication Date: Up to Oct 1990\**

**Water Well Information System:**

Provincial WWIS

This database describes locations and characteristics of water wells found within Ontario in accordance with Regulation 903. It includes such information as coordinates, construction date, well depth, primary and secondary use, pump rate, static water level, well status, etc. Also included are detailed stratigraphy information, approximate depth to bedrock and the approximate depth to the water table.

*Government Publication Date: 1955-Mar 2014*

# Definitions

**Database Descriptions:** This section provides a detailed explanation for each database including: source, information available, time coverage, and acronyms used. They are listed in alphabetic order.

**Detail Report:** This is the section of the report which provides the most detail for each individual record. Records are summarized by location, starting with the project property followed by records in closest proximity.

**Distance:** The distance value is the distance between plotted points, not necessarily the distance between the sites' boundaries". All values are an approximation.

**Direction:** The direction value is the compass direction of the site in respect to the project property and/or center point of the report.

**Elevation:** The elevation value is taken from the location at which the records for the site address have been plotted. All values are an approximation. Source: Google Elevation API.

**Executive Summary:** This portion of the report is divided into 3 sections:

'Report Summary'- Displays a chart indicating how many records fall on the project property and, within the report search radii.

'Site Report Summary'-Project Property'- This section lists all the records which fall on the project property. For more details, see the 'Detail Report' section.

'Site Report Summary-Surrounding Properties'- This section summarizes all records on adjacent properties, listing them in order of proximity from the project property. For more details, see the 'Detail Report' section.

**Map Key:** The map key number is assigned according to closest proximity from the project property. Map Key numbers always start at #1. The project property will always have a map key of '1' if records are available. If there is a number in brackets beside the main number, this will indicate the number of records on that specific property. If there is no number in brackets, there is only one record for that property.

The symbol and colour used indicates 'elevation': the red inverted triangle will dictate 'ERIS Sites with Lower Elevation', the yellow triangle will dictate 'ERIS Sites with Higher Elevation' and the orange square will dictate 'ERIS Sites with Same Elevation.'

**Unplottables:** These are records that could not be mapped due to various reasons, including limited geographic information. These records may or may not be in your study area, and were included as reference.

Sanam Rahmanian  
MMM GROUP LIMITED  
2655 North Sheridan Way  
Suite 300  
MISSISSAUGA ON L5K 2P8

Dear Sanam:

**RE: 441 Bloor Street East, Station 11, Toronto, Ontario**

This is with reference to your request and fee of \$50.00 + HST, for information on the above location.

Enclosed are computerised print screens showing an active private fuel outlet along with equipment details showing underground fuel storage tank details. Copies of inspection reports are also enclosed.

The *Technical Standards and Safety Act* and associated regulations do not require the registration of private fuel outlets. Nor does it require that any documentation on these facilities be submitted to, or reviewed or approved by TSSA. As a result TSSA has limited information on these facilities. TSSA cautions that any information provided may be inaccurate, incomplete or out of date.

After a search of our files, TSSA has no record of any further outstanding instructions, incident reports, fuel oil spills or contamination records respecting the above-mentioned property.

This is all the information the Fuels Safety Division has on this property at this time.

***It should be noted that the Fuels Safety Division did not register private fuel underground/ aboveground storage tanks prior to January of 1990 or furnace oil tanks prior to May 1, 2002. Also note that the Fuels Safety Division does not register private waste oil tanks in apartments, office buildings, residences etc. or ABOVEGROUND gas or diesel tanks.***

TSSA does not make any representations or warranties with respect to the accuracy or completeness of any records released by TSSA, and the user assumes all risk in using or relying on released records.

Yours truly,

Ruchi Chohan  
Public Information Services

**Subject:** RE: Request for information

Hello,

# 56292

✓ Thanks for your email. I would like to request for more information regarding the active underground storage tanks at 441 Bloor Street East in Toronto, ON. Please call my office number: 905 823 8500 x 1362 or my cell phone number: 647 297 8639, so I can provide you my credit card information.

Thanks,

**Sanam Rahmanian, M.Sc.**

**From:** Ruchi Chohan [mailto:rchohan@tssa.org] **On Behalf Of** Public Information Services  
**Sent:** June-16-16 9:47 AM  
**To:** Rahmanian, Sanam  
**Subject:** RE: Request for information

Good morning Sanam,

Thank you for your inquiry.

I have searched the below noted address (addresses) and I have located the following record:

441 Bloor Street East, Station 11 , Toronto has record of 1 active underground fuel tank

For a more detailed report including underground fuel storage tank details and copies of all inspection reports, please submit your request in writing to Public Information Services via e-mail ([publicinformationsservices@tssa.org](mailto:publicinformationsservices@tssa.org)) or through mail along with a fee of \$56.50 (including HST) per location. The fee is payable with credit card (Visa or MasterCard) or with a cheque made payable to TSSA.

*Due to a significant increase in the volume of Release of Information (ROI) requests, and TSSA's move to 345 Carlingview in June, the processing of your request will be delayed. We apologize for any inconvenience.*

Thank you and have a great day!

Ruchi

**DRAFT**

## **STANDARD LIMITATIONS PHASE I ENVIRONMENTAL SITE ASSESSMENT (PHASE I ESA)**

---

*These Standard Limitations form part of the Report to which they are appended and any use of the Report is subject to them.*

### **1. EXCLUSIVE USE BY CLIENT**

This Report was prepared for the exclusive use of the client identified as the intended recipient. Any use of the Report by any other party without the written consent of MMM Group Limited is the sole responsibility of such party. MMM Group Limited accepts no responsibility for damages that may be suffered by any third party as a result of decisions made or actions taken based on the Report.

### **2. SCOPE, TERMS AND CONDITIONS OF CONTRACT**

The observations, investigations and interviews (hereinafter referred to as the "Work") upon which this Report is based were carried out in accordance with the scope, terms and conditions of the contract or the proposal pursuant to which the Work was commissioned. The conclusions presented in the Report are based solely upon the scope of services described in the contract or the proposal and governed by the time and budgetary constraints imposed by them.

### **3. STANDARD OF CARE**

The Phase I ESA was carried out in accordance with generally accepted environmental study and/or professional practices, industry standards and applicable environmental regulations. No other warranties are either expressed or implied with respect to the professional services provided under the terms of the contract or proposal and represented in this Report.

### **4. SCOPE OF THE PHASE I ESA**

A Phase I ESA is conducted as a preliminary determination of the likelihood that contaminants may affect soil or water on the subject property. It is based on a visual assessment of the property and review of existing information as it is reasonably accessible. Sample collection and analyses are not elements of a Phase I ESA. The nature of the Work dictates that findings and conclusions in the Report may not be definitive, and may include qualitative statements based on professional judgement, the observations made and the data reviewed.

### **5. AVAILABILITY OF SITE**

The Work performed was based, in part, on visual observations of the subject property and attendant structures. Findings cannot be extended to portions of the property or structures that were not available for observation at the time of our site reconnaissance due to objects or coverings, or inaccessibility for reasons beyond the control of

MMM Group Limited. The methods of evaluation employed, while intended to minimize the potential for environmental concerns to go undetected, cannot guarantee that such concerns are, in fact, absent. For instance, the absence of contamination in soil can only be confirmed based on a soil sampling and analytical program.

### **6. INFORMATION SUPPLIED BY OTHERS**

The research performed for a Phase I ESA considers information supplied by others (e.g., local, provincial and federal agencies, property owner and/or occupant). All information supplied by others was considered based on professional judgement; however, MMM Group Limited did not verify its accuracy unless specifically noted in the Report. MMM Group Limited does not assume any obligation to update information supplied by others or to confirm that it constitutes all that exists and pertains to the property.

### **7. REASONABLE CONCLUSIONS**

The conclusions of the Phase I ESA regarding the likelihood of contaminant effects on the subject property are based on observations and a review of information from other sources as identified in the Report. The possibility remains that unexpected environmental conditions may be encountered at the property; in which case, MMM Group Limited should be notified in order that we may determine if modifications to the conclusions presented in this Report are necessary.

### **8. REPORT AS A COMPLETE DOCUMENT**

This Report must be read as a whole and sections taken out of context may be misleading. If discrepancies exist between the preliminary (draft) and final versions of the Report, the final version of the Report shall take precedence.

### **9. LIMITATION OF LIABILITY**

MMM Group Limited's liability with respect to the Phase I ESA is limited to re-performing, without cost, any part of the Work that is unacceptable solely as a result of failure to comply with industry standards. MMM Group Limited's maximum liability is limited in accordance with terms in the original contract, provided that notice of claim is made within regulated timelines as of the date of delivery of the Report.
