

The map displays the Baby Point Heritage Conservation District Study Area, outlined in red. The area is divided into various colored zones: pink for 'Archaeological Potential Confirmed', yellow for 'Area Cleared of Archaeological Potential', and green for 'No Potential in AMP, Confirmed by Field Assessment'. The map also shows property parcels, some of which are marked with a cross-hatch pattern indicating they were previously assessed and cleared of further archaeological concern. Key streets include Kingsway, Old Mill Rd, Baby Point Rd, and various residential streets like St. Marks Rd, Humboldt Point, and Baby Point Dr. A legend on the right explains the symbols and colors used. An inset map in the top right corner shows the location of the study area within the City of Toronto. A scale bar indicates distances in metres (0 to 200). The map is dated 11/2/2017 and is part of the ASI Project No. 17PL66.

**Legend:**

- Baby Point Heritage Conservation District Study Area
- Baby Point Archaeologically Sensitive Area
- Property Parcel
- Parcel Previously Assessed and Cleared of Further Archaeological Concern

**Field Assessment Results**

- Archaeological Potential Confirmed
- Area Cleared of Archaeological Potential
- No Potential in AMP, Confirmed by Field Assessment

**BASE:** City of Toronto Data; Esri, DigitalGlobe, GeoEye, i-cubed, USDA, USGS, AEX, Getmapping, Aerogrid, IGN, IGP.

**Scale:** 0 to 200 Metres

The HCD study provided an opportunity to refine the original definitions of the extent of archaeological potential within the Baby Point ASA to provide a more accurate identification of where archaeological assessments will be required in advance of any redevelopment and where there should be no such requirement. This was carried out on a property-by-property basis. As a result of this additional review, which involved consideration of landscape changes seen on historical aerial photographs and observations made from the streets, 13 properties within the Baby Point neighbourhood were cleared of archaeological potential. Within the Old Millside neighbourhood, 47 properties, in whole or in part, were cleared of archaeological potential.

Outside of the HCD, any alterations that will affect properties still identified as having archaeological potential as part of the Baby Point ASA must be reviewed by City staff to determine whether or not a Stage 1-2 archaeological assessment is required. Alterations of properties outside of the HCD do not require a heritage permit.

- Additions to existing structures requiring subsurface disturbances subject to permit applications;
- New structures/installations subject to permit applications in open space areas within other part(s) of the property requiring subsurface disturbances;
- Foundation repair/alteration to existing buildings subject to permit applications;
- New or replacement service hook ups to buildings originating from the adjacent right-of-way subject to City approvals;
- Landscape alterations requiring subsurface excavation/grade changes (excluding minor or ongoing gardening activities);
- City tree planting operations within City-owned lands;
- Any other City initiatives or public/private utilities upgrades within City-owned lands
