

Traffic Management and Mitigation Study in the Leslieville Community

IBI Group has been retained by the City of Toronto for the Traffic Management and Mitigation Study within the Leslieville Community. Recent and proposed changes in development are impacting transportation. This will result in additional traffic, and potentially different types of traffic, within the study area. The objective is to identify the key congestion areas and propose innovative short and long-term projects to mitigate transportation issues.

Consultation with interested parties, including the public, businesses, and regulatory agencies will form an integral part of this study to identify and address interests and concerns. Two Community Consultation Meetings will be held during the study to provide opportunities to meet with the Project Team, learn about the study, and to share feedback. Upon completion of the study, a Traffic Management and Mitigation Study Report will be prepared and made available for public review and comment.

We want to hear from you. If you have any questions or concerns, would like to know more about the study, or join the project mailing list, please contact the Project Manager as noted below. You can also visit the study website for more information and updates at: www.toronto.ca/leslievilletrafficstudy.
