

## STOP 5 – THE RADIATOR

We now consider this radiator unsightly and old fashioned. In 1899, this was the height of heating technology. The original system was called the one pipe overhead low pressure system, in which steam is forced in the Safford Patent Radiators. It was noted in *The Canadian Architect and Builder* that more progress has been made in heating technology in the last five to six years than in the previous 25 years.
