

St. Clair Reservoir Rehabilitation

Project Update: Re-Opening of Sir Winston Churchill Park

Work on the St. Clair Reservoir Rehabilitation Project including the restoration of Sir Winston Churchill Park is nearing completion. The northwest and northeast sections of the park re-opened in late 2018 and summer 2019 respectively, and the remaining parts of the park are now open. Some final landscaping work will be completed in spring 2020.

Tennis Courts

For information on re-opening dates for the tennis club, please contact the Sir Winston Churchill Park Tennis Club at info@winstonchurchilltennis.ca.

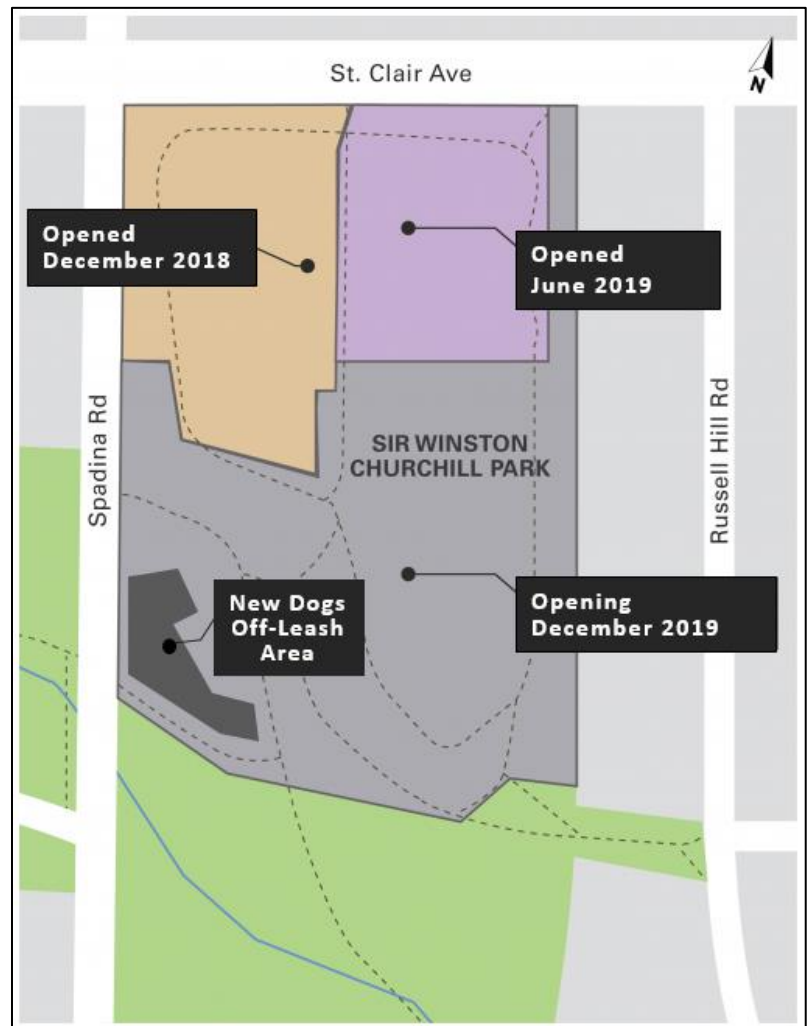

Dogs Off-Leash Area

The dogs off-leash area has been rebuilt approximately 125m to the southwest of the previous off-leash area, and will be implemented in two phases. Phase 1 will be completed in December 2019, and will see the off-leash area open with a fenced area, accessible gates, accessible concrete walkway, water fountain and choker sand surface. Phase 2 will see additional elements such as trees and landscaping added. The landscaping and planting work will be done in the spring to provide optimal growing conditions for the plants and trees. It is anticipated that Phase 2 will be completed between April and June 2020 and the off-leash area may be temporarily closed during this time to complete the work. Updated signage will also be added within the park to direct users to the new off-leash area.

For more information on the dogs off-leash area, please contact Parks, Forestry and Recreation at dola@toronto.ca.

The St. Clair Reservoir Rehabilitation project has included structural rehabilitation and repair of the reservoir and internal mechanical systems, replacing the waterproofing membrane on the roof of the reservoir, and re-sodding and landscaping the park space. This important work will ensure the structural integrity of the reservoir, extend its service life and bring this infrastructure up to a state of good repair.

More information on this project is available at toronto.ca/stclairreservoir.
