Wincott Park Stormwater Management Pond Sediment Removal and Maintenance

Start Date: Fall 2019
Expected Completion Date: Winter 2020

The Wincott Park Stormwater Management Pond (SWMP) is a large facility located south of Dixon Road, west of Islington Avenue that collects stormwater runoff to reduce localized flooding. It also allows sediment runoff to settle at the bottom of the pond, which enhances ecological conditions and improves water quality prior to entering the local watercourse.

To help ensure the pond is working as originally designed, the City will be working with Toronto and Region Conservation Authority (TRCA) to remove sediment and conduct maintenance on the pond this winter. Prior to starting the maintenance work, the TRCA will begin to gradually lower the water levels, which will allow for wildlife to relocate on their own.

A follow-up Construction Notice with the work details will be distributed to the neighbourhood and posted at the worksite.

A map of the work area can be found on page 2 of this notice.
