

PREVENT THE SPREAD OF COVID-19 IN SHARED LAUNDRY AREAS

Help reduce virus spread

- Wear a mask or face covering.
- Stay six feet (two metres) from others at all times.
- Avoid crowds; do laundry during off-peak times, when it is less busy.

Keep surfaces clean

- Sort and fold your clothes when you return home.
- Wash your hands with soap and water or an alcohol-based hand sanitizer after touching surfaces such as washing machines and dryers.

Laundry

- Use regular laundry detergent; washing cycles will kill the virus.
- Warmer water temperatures are preferred.
- High temperatures in a dryer will usually kill any remaining viruses that may be present.
