Directory of Green Organizations	
Directory of Green Associations and NGOs – Canada Wide	20
Directory of Education, Government and Research Organizations in Toronto Region	22

Prepared by Sector Development Office, Economic Development and Culture, City of Toronto

An electronic version and a sortable spreadsheet of this directory can be downloaded at www.toronto.ca/green

Front Cover: Sherbourne Common Storm Water Treatment Plant; a Toronto urban sawmill; TREC wind turbine at Exhibition Place

Inside of Front Cover: Location of green industry companies and other green organizations in the City of Toronto

NOTE: This list is not to be considered a complete listing of all companies and organizations operating in the green sectors in the vicinity of Toronto. While every effort is made to maintain accuracy, the City of Toronto ("the City") does not guarantee that the information contained in the directory is always correct or accurate. The City does not warrant or make any representations as to the quality, content, accuracy or completeness of the information. The City makes no warranties, expressed or implied as to the fitness of the information for any purpose, or to results obtained by individuals using the information and is not responsible for any action taken in reliance on the information contained in the directory.

Introduction

As cities, people, and the planet deal with the ever intensifying consequences of climate change, we must focus on transitioning our economy to one that is clean, equitable, and sustainable. The City of Toronto's Sector Development Office provides economic support for a number of priority sectors in Toronto, including the Green Sector.

Toronto's Green Sector shows robust activity, as of 2019, almost 61,000 people are employed in the Green Sector in the City and nearly double that in the region. Green Sector employment is growing twice as fast as the rest of Toronto's economy (3.9% vs. 1.6% annually between 2015 and 2019).

Methodology

The companies included in this directory are located generally within the Greater Toronto Area (GTA). The rationale for including companies located outside the boundaries of the City of Toronto is to capture potential supply chain linkages between organizations and to include the travel patterns that Toronto residents might cover for employment and the purchasing of services and products. The geographic parameters of the GTA better capture these travel patterns and reflect a more cohesive group of green businesses operating in and serving the areas where Toronto residents live and interact.

Figure 2: Map of the Greater Toronto Area

Various industry experts were also solicited for suggestions regarding green businesses that might be included in this directory. By supporting these local businesses we keep jobs within the City of Toronto and the GTA. The intent is to update and publish this directory on a regular basis.

We recognize that there are companies that we have missed. Companies/organizations that are in the green sector that are interested in being included in future updates of this directory can input their information here: https://cotsurvey.chkmkt.com/green-directory

If you are listed in the directory with incorrect information then please contact us at greentech@toronto.ca with the correct information.

Defining the Green Sector

City of Toronto identifies three "green" levels in society: the Green Economy, the Green Sector, and Green Tech. The Green Sector is the economic sector which we report on here.

The Green Economy: Businesses and organizations in all parts of the economy that use environmental practices that are significantly better in reducing the impact of human activity on the environment than the current standard practices in society.

<u>The Green Sector:</u> Economic activities (processes, products or services) that reduces environmental impacts through:

- 1. Environmental protection and remediation activities;
- 2. The sustainable use of natural resources which includes the supply chain of goods and services of recycled materials and other processes that reduce the consumption of natural resources;
- 3. The supply chain of goods and services that have been specifically modified or adopted to be significantly less energy or resource intensive than the industry standard.

<u>Green Tech:</u> Pure play companies in the green sector that have developed environmental solutions (either products or services) that use significantly less energy or resources than the industry standard and current practices in society. This would exclude environmental servicing firms such as public transit and water treatment plants.

The Five Subsectors

We split the green sector into **five subsectors** which we define below. Each subsector also consists of numerous clusters of companies and organizations that work closely together.

Many Green Sector companies fall under more than one subsector. Most companies are classified by the subsector in which most of their activity is focused on. However, organizations, namely NGOs, which equally address multiple green subsectors are classified under the category of Multiple Green
Subsectors. There are also professional services firms that provide services focused on the green sector but without a sub-sector focus and these can be found under Professional Services for all Green Sectors.

Bio-Economy

Businesses and other organizations involved in the harvesting and preparation of bio-mass for use in non- industry standard types of products or service offerings. While the forest industry is a sustainable sector, the use of wood for purposes such as housing construction and furniture is part of society's norm and hence is not included here. Businesses involved in the production or sale of food and beverages and businesses engaged in the development and sale of pharmaceuticals or life sciences-related products are excluded.

Green Buildings

Businesses and other organizations engaged in building practices with materials and processes that are environmentally responsible and use significantly less energy or resources at all stages of a building's life-cycle (siting, design, construction, operation, maintenance, renovation, and demolition). Businesses that install clean energy components to buildings, and businesses that install green roofs are included.

Clean Energy

Businesses and other organizations engaged in the manufacturing, distribution and/or servicing of renewable energy, energy storage, smart grid, or energy efficiency technologies and services.

Resource Management

Businesses and other organizations that focus on the sustainable use of natural resources, either through the management or development of natural resources, which ensures that the needs of the present are meet through environmentally responsible economic growth that does not compromise the ability of future generation to meet their own needs. Also included are businesses that focus on activities that are intended to prevent, reduce, or eliminate pollution or other forms of environmental degradation. This includes waste and water treatment, land remediation, recycling, products that are made from recycled goods. For Toronto - recycled wood is considered part of the Bio-Products sector.

Sustainable Transportation

Businesses and other organizations involved in the manufacturing of products that provide transportation of people and products by modes that use less energy and resources than the standard, and firms and organizations that provide those transportation services. This includes all transportation components such as electric vehicles, bikes, buses, trains, and public transit. It includes the full supply chain from manufacturing through to operation of public transport systems.

Cluster Chain Segments

Below are how the City defines each Cluster Chain (Supply Chain) Segment of the sector.

Associations/NGOs

Associations/NGOs, trade and industry organizations, charities, non-profit organizations and non-governmental organizations that have an interest in environmental issues.

Education

Providing education and training services to the green sector.

Government/Government Agency

Government departments and related organization such as public utilities.

Manufacturing

Organizations that either manufacture a product from raw materials or assembles a final product from a variety of manufactured components or sub-assemblies.

Wholesale

Companies that sell bulk products, usually in a business to business context

Professional Services

Professions which require a professional designation or certification such as accountants, engineers, lawyers who work primarily in the green sector listed.

Research

Organizations that provide or support primary or applied research - either based on technology development or other social or policy applications. This includes think tanks, research organizations, and policy institutes.

Retail

Organizations that sell to the end user. This can include firms that sell and install.

Service Provider

Providers of specific services such as consultants, installation and repair services, trades (such as carpenters, electricians), transportation services, financial services, and marketing and communications.

Other green professional services

Professions such as lawyers, consultants, engineers, etc. that provide support across multiple green subsectors.

Other

Includes product certification services, as well as suppliers of raw or unprocessed materials.
