

HELP PREVENT COVID-19 SPREAD IN WORKPLACES

Develop sick time policies & procedures to help support employees to stay home when they are sick.

Ensure employees complete a health screening questionnaire before each shift.

If an employee doesn't pass the screening protocol, they should self-isolate at home & call Telehealth or their healthcare provider.

If an employee develops symptoms at work, they should go home right away.

Sick employees who test negative can return after 24 hours symptom-free. Employees who test positive must follow TPH advice for return to work.
