Guidance for Employers on Managing COVID-19 in the Workplace

As health authorities around the world take action to contain the spread of COVID-19, employers must also play a role in stopping the spread of this disease. This guidance document provides simple strategies to prevent the spread of COVID-19 in your workplace to keep everyone safe. The strategies can and should be adapted to meet the unique needs of every workplace. Additional guidance for various sectors are found in the Other Resources section at the end of this document.

The aim and purpose of this document is to assist individuals and businesses with information related to the Ontario Government’s reopening framework as well as Toronto Public Health requirements to reduce the spread of COVID-19. It is important to know that breaches of some of these directions will constitute offences under provincial regulations or other public health legal requirements. While we aim to provide relevant and timely information, no guarantee can be given as to the accuracy or completeness of any information provided. This guidance is not intended to nor does it provide legal advice and should not be relied upon or treated as legal advice. Users seeking legal advice should consult with a qualified legal professional.

On March 3, 2021, Toronto’s Medical Officer of Health issued a Class Order to all workplaces in the City of Toronto that are identified by Toronto Public Health (TPH) as experiencing an active COVID-19 outbreak. Operators must comply with the requirements as stated in the Order until the outbreak is declared over by TPH. See details below.

General Guidance

- Review the Guidance for Employers on Preventing COVID-19 in the Workplace to plan and implement protocols to keep staff and customers safe.
- Visit our website at toronto.ca/COVID19 often as information changes frequently.

Roles and Responsibilities of the Employer and Employee during COVID-19

<table>
<thead>
<tr>
<th>Employer Responsibilities</th>
<th>Employee Responsibilities</th>

<tbody>
<tr>
<td>Keep workers and workplaces safe and free of hazards.</td>
<td>Refuse unsafe work and promptly report the circumstances to your employer or supervisor.</td>
</tr>
</tbody>
</table>
### Employer Responsibilities

- Read the [guide to the Occupational Health and Safety Act](#) to understand all of your health and safety rights and responsibilities.
- Understand COVID-19 risks.
- Control COVID-19 risks in the workplace.
- Develop a [COVID-19 workplace safety plan](#). Comply with any advice, recommendations and instructions by the Office of the Chief Medical Officer of Health and City of Toronto bylaws relevant to your organization.

### Employee Responsibilities

- Understand and follow your employers' workplace health and safety directions (e.g. use or wear the personal protective equipment that your employer requires).
- Follow direction from public health officials. Report any circumstance in the workplace that is likely to be hazardous to the health or safety of others in the workplace. This includes reporting one's own potential exposure to COVID-19 that caused or is likely to cause illness to another person.

---

**Immediate Notification to Toronto Public Health**

- Immediately notify Toronto Public Health (TPH) using the [COVID-19 Workplace Reporting Tool](#) as soon as you become aware of two or more people who test positive for COVID-19 within a 14-day interval in connection with your workplace premises.
- If two or more people test positive for COVID-19 within a 14-day interval in connection with your workplace premises, employers must:
  - Provide contact information for a designated contact person at the workplace premise and ensure that person is readily available to communicate with TPH and implement any additional measures immediately as required by TPH.
  - Ensure that accurate and updated contact information for all workers is made available to TPH within 24 hours of request in support of case management and contact tracing requirements for COVID-19.
  - Cooperate with infection prevention and control personnel from TPH, including allowing entry into the workplace premise for inspection, and to support enhanced infection prevention and control measures and recommendations.
- For more information, see [Reporting Workplace Outbreaks to Toronto Public Health](#).
- Businesses must ensure the [Ontario Ministry of Labour, Training, and Skills Development](#) and/or other relevant government authorities (e.g. [Workplace Safety and Insurance Board (WSIB)](#)) have been notified in accordance with the [Occupational Health and Safety Act](#), and other applicable law.
Support the Employee with COVID-19

- Know and communicate the rights and responsibilities of the employer and staff during COVID-19.
- Ensure you have policies that support employees who need to be absent from work due to illness or being a close contact of a person with symptoms of COVID-19 or confirmed infection.
  - Ensure that all employees are aware of the income replacement and workplace-related benefits they are entitled to if they have to isolate due to symptoms of COVID-19, being tested for COVID-19, or being a close contact of someone with COVID-19. They may also be eligible for Canada Recovery Sickness Benefit (CRSB).
- Employees are responsible to report COVID-19 illness to their employer if it is likely to cause illness to another person in the workplace.
- If an employee discloses to you that they have been diagnosed with COVID-19, or have been exposed to a person with COVID-19, confirm that they are self-isolating.
- Clean and disinfect surfaces that may have been touched by an employee with COVID-19 as soon as possible.
- Employees should not return to work until after the required self-isolation period:
  - Individuals with COVID-19 must self-isolate for 10 days from the day their symptoms started. They should no longer have a fever, and their symptoms should be improving for at least 24 hours. If they did not have any symptoms of COVID-19 at or around the time of testing, they must self-isolate for 10 days after the test was performed.
  - Individuals with severe illness may require longer self-isolation periods, as directed by TPH.
  - Individuals who have been identified as close contacts must self-isolate for 14 days after their last exposure to the person with COVID-19, even if they test negative for COVID-19.
- Use the staff screening questionnaire (p. 2) to determine when it is safe to return to work.
- Toronto Public Health does not recommend that employers require clearance testing or doctor’s notes for return to work.

Contact Tracing in the Workplace

- Toronto Public Health interviews each person with COVID-19 as soon as possible to ensure they are self-isolating, and helps them to identify people who may have been exposed while they were contagious, including in the workplace.
  - A person with COVID-19 is contagious from 48 hours before symptoms start until the end of their self-isolation period, usually 10 days after symptoms began.
  - If someone tested positive for COVID-19 but did not have symptoms, they are generally considered to be contagious from 48 hours before the test to 10 days after the test.
Example: If an employee develops a fever and cough on September 4 and tests positive for COVID-19, they would be considered contagious between September 2 and September 14. Anyone the employee interacted with during this time would be considered exposed.

**Identify close contacts**

- Toronto Public Health will help individuals with COVID-19 to identify who is a close contact. They will provide a letter for them to give to the close contact instructing them to self-isolate for 14 days from the last time they interacted with the person who tested positive, and recommend that they also get tested.

- **Close contacts (or higher risk contacts)** include staff, visitors or patrons who were within two metres/six feet of the person with COVID-19, with or without a mask, for approximately 15 minutes or more, or who had direct contact with that individual while they coughed or sneezed.
  - Examples: Having lunch or a drink with co-worker at the same table sitting less than two metres/six feet apart; staff that are unable to keep distance due to the job such as working on an assembly line; or sharing a drink from the same glass or bottle.
  - Close contacts should **self-isolate** for 14 days from the last day that they were exposed to the person with COVID-19 while they were contagious.

- **Lower risk contacts** include staff, visitors or patrons who generally maintained physical distancing of at least two meters/six feet with consistent and appropriate use of recommended personal protective equipment (PPE). Situations where there may be potential increased risk, such as longer duration of indoor exposure (e.g., full shift), distance less than two meters/six feet apart, poor ventilation, or improper use of PPE, may be deemed higher risk.
  - Examples: Co-workers in a locker room consistently wearing medical masks and separated by more than two metres/six feet; co-workers on a production line who at times have to stand within two metres/six feet apart, both consistently wearing medical masks and eye protection; or quickly walking by the case in a hallway.
  - Lower risk contacts should **self-monitor** for symptoms for 14 days from the last day that they were exposed to the person with COVID-19 while they were contagious.

**Maintain attendance records**

- To support contact tracing, maintain attendance records of all staff and clients (i.e. name, date, time, email address or phone number).

- Some businesses which have patrons entering for **limited exceptions** are also required to maintain contact information for all patrons/visitors who enter their facility, including:
  - Community centres and multi-purpose facilities
- Concert venues, theatres and cinemas (for performers)
- Indoor and outdoor sports and recreational fitness facilities
- Meeting and event spaces
- Public libraries

Support contact tracing and notify close contacts

- Employers may be notified by an employee or patron who may have been contagious while at the workplace.
  - The employer should work with an employee with COVID-19 to identify if others may have been exposed at the workplace while the person was contagious.
  - The employer can notify employees who were considered to have been close contacts to self-isolate, and lower risk contacts to self-monitor, for 14 days from their last exposure to the case, while maintaining confidentiality of all affected employees.
  - This approach can also be used if an employer is informed that a patron/client attended the establishment while contagious, and had close contact with their employees.
  - If a person with COVID-19 discloses illness to the employer, but others at the workplace have not been exposed (e.g. staff was not present while contagious), then further contact tracing would not be needed at the workplace.

- Employers may be notified by TPH that a person with COVID-19 may have been present at the workplace while contagious.
  - Consent is obtained from the employee before TPH discloses personal health information to the employer.
  - Upon request, be prepared to provide a list of the names and contact information of staff and, if applicable, clients or patrons, who may have been exposed. Toronto Public Health can use this information to notify and provide instructions for close contacts to self-isolate or self-monitor for COVID-19 symptoms.

Maintain privacy and confidentiality

- Personal information collected for COVID-19 contract tracing can only be used for this purpose, unless an individual provides their consent. Records should only be kept for 30 days, and then shredded.
- Ensure you maintain privacy and confidentiality of employees' and patrons' personal health information at all times. If necessary, use non-descript language if notifying others that a person who was in the workplace, floor, or area was infected or exposed to the COVID-19 virus.
• Public notification is generally not required unless persons who may have been exposed while at the workplace cannot be identified or contacted in a timely manner.

COVID-19 Outbreaks in the Workplace

Effective immediately, all workplaces that are experiencing an active COVID-19 outbreak must comply with the requirements issued in a Class Order until cleared by Toronto Public Health (TPH). Requirements include enhanced measures related to:

• Following TPH instructions related to closing all or any part of the workplace
• Following TPH instructions related to COVID-19 testing
• Wearing of masks for all employees at all times, with exceptions
• Capacity limits for workplace common areas

For more information, visit Class Orders for Workplaces Experiencing a COVID-19 Outbreak

• A workplace outbreak can be defined as two or more confirmed COVID-19 cases in the workplace that are linked (e.g. same work area, same shift) within a 14-day period where both cases could have reasonably become infected while at the workplace.
  o Examples of having "reasonably" become infected while at the workplace include a known exposure to a staff, visitor or patron who was COVID-19 positive while in the workplace, or no obvious source of infection outside of the workplace.
• Toronto Public Health will conduct an investigation of workplace outbreaks in some circumstances.
• A public health investigation can include any of the following:
  o Interview with the employer to assess existing prevention measures and possible sources of transmission in the workplace.
    ▪ This may be done by telephone and/or by electronic survey.
  o Request for information to help identify additional cases and tracing contacts.
    ▪ This may include staff contact information, staff schedules, and patron logs.
    ▪ You may be provided with an electronic link or survey to share information securely with the investigator.
  o Guidance on additional required prevention measures, including workplace restrictions and closures.
  o Recommendations on targeted testing of staff.
  o Support in communicating to staff, business partners, and the public.
  o On-site inspection of the workplace.
• Information must be provided to TPH in a timely manner to help stop further spread of COVID-19.
• Consider enhanced cleaning and disinfecting measures to reduce the risk of disease spread in the workplace.
