For all situations listed in the flow chart below:

(A) Close Contact

- **Household members** of the COVID-19 positive case/individual with COVID-19 symptoms, including roommates living in residence/dormitory, should generally self-isolate while the individual with COVID-19 symptoms is isolating, with some exceptions.
- Self-isolation can end when the person with COVID-19 ends their isolation, provided the household contact does not have any symptoms of COVID-19.
- Anyone who is a **non-household close contact** must:
  - self-monitor for symptoms for 10 days and self-isolate if they develop any symptom of COVID-19;
  - continue to wear a well-fitted mask in all public settings;
  - not visit anyone who is immunocompromised or at higher risk of illness (i.e. seniors); and
  - not visit or attend work in any highest-risk settings (unless they have previously tested positive for COVID-19 on a RAT or molecular test in the past 90 days).

(B) Travel Outside of Canada

- Anyone who has travelled outside of Canada must follow federal requirements for travellers for quarantine and testing after returning from international travel.

---

### Flow Chart

1. **Have Symptoms?**
   - **Got tested: PCR and/or Rapid antigen test (RAT)**
     - Stay home and self-isolate while awaiting test results. Household members of the COVID-19 positive case/individual with COVID-19 symptoms, should generally self-isolate while the individual with COVID-19 symptoms is isolating, with some exceptions.
   - **Test Positive (PCR/RAT)**
     - Faculty/staff/students/visitors should stay home, self-isolate for 5 days (if fully vaccinated) or for 10 days (if not fully vaccinated or if immunocompromised) and follow advice from public health. They should not go to campus/work.
   - **Test Negative (RAT)**
     - Faculty/staff/students/visitors who do not have symptoms of COVID-19 do not need to self-isolate. They can continue to self-isolate. They can end isolation if two consecutive rapid antigen tests, separated by 24-48 hours, are both negative and symptoms have been improving for 24 hours.
   - **Test Negative (PCR)**
     - Faculty/staff/students/visitors can go back to campus/work if it has been 24 hours since their symptoms started improving, as long as A and B do not apply. Household members may also end isolation.

2. **Not tested**
   - Stay home and self-isolate for 5 days (if fully vaccinated) or for 10 days (if not fully vaccinated or if immunocompromised). Can return to campus/work following isolation if symptoms are improving.
   - Household members of the COVID-19 positive case/individual with COVID-19 symptoms, should generally self-isolate while the individual with COVID-19 symptoms is isolating, with some exceptions.

---

If there is an alternative diagnosis from a health care provider, they can return to campus/work once their symptoms are improving for 24 hours, as long as A and B do not apply. Household members can also return to child care/school/campus/work.
