

COVID-19 Vaccine: Building Trust and Confidence

Presented by: Dr. Vinita Dubey
Associate Medical Officer of Health

Moderator: Domenico Calla

May 12, 2021

COVID-19

- A COVID-19 infection can cause damage to the lungs, heart or brain.
- Some people who have had a COVID-19 infection will have symptoms and experience long term effects months after the infection is gone.
- Long term effects may include persistent fatigue, shortness of breath, cough, joint pain, pounding heartbeat, trouble concentrating, skin rash or hair loss.

Vaccines Can Help

**Vaccines used in
Canada are safe
and they work.**

**Vaccines help to
protect us from
serious illness**

1.3 Billion Doses Given Worldwide

As of May 11, 2021:

- 1.3 billion doses of COVID-19 vaccines have been given in 174 countries around the world.
- 16.5 million doses have been given in Canada.
- **1.5 million** doses have been given in **Toronto**, which is approximately 50% of all eligible residents in the City.

Vaccine development and approval in Canada

Vaccine development

Scientists develop a potential vaccine

Scientists conduct lab and animal studies before testing on humans

10s of volunteers

Phase I

- Is the vaccine safe?
- What is a safe dose?
- Are there any side effects?

100s of volunteers

Phase II

- How well does the vaccine work?
- Is it safe on a larger number of people?
- Safest and most effective dose?

1000s of volunteers

Phase III

- Does the vaccine prevent disease?
- What are the side effects?

Manufacturer submits application to Health Canada for review

Preclinical →

----- Clinical Trials -----

----- → Application -----

Review and approval of vaccines

COVID-19 Vaccines Are Safe For ...

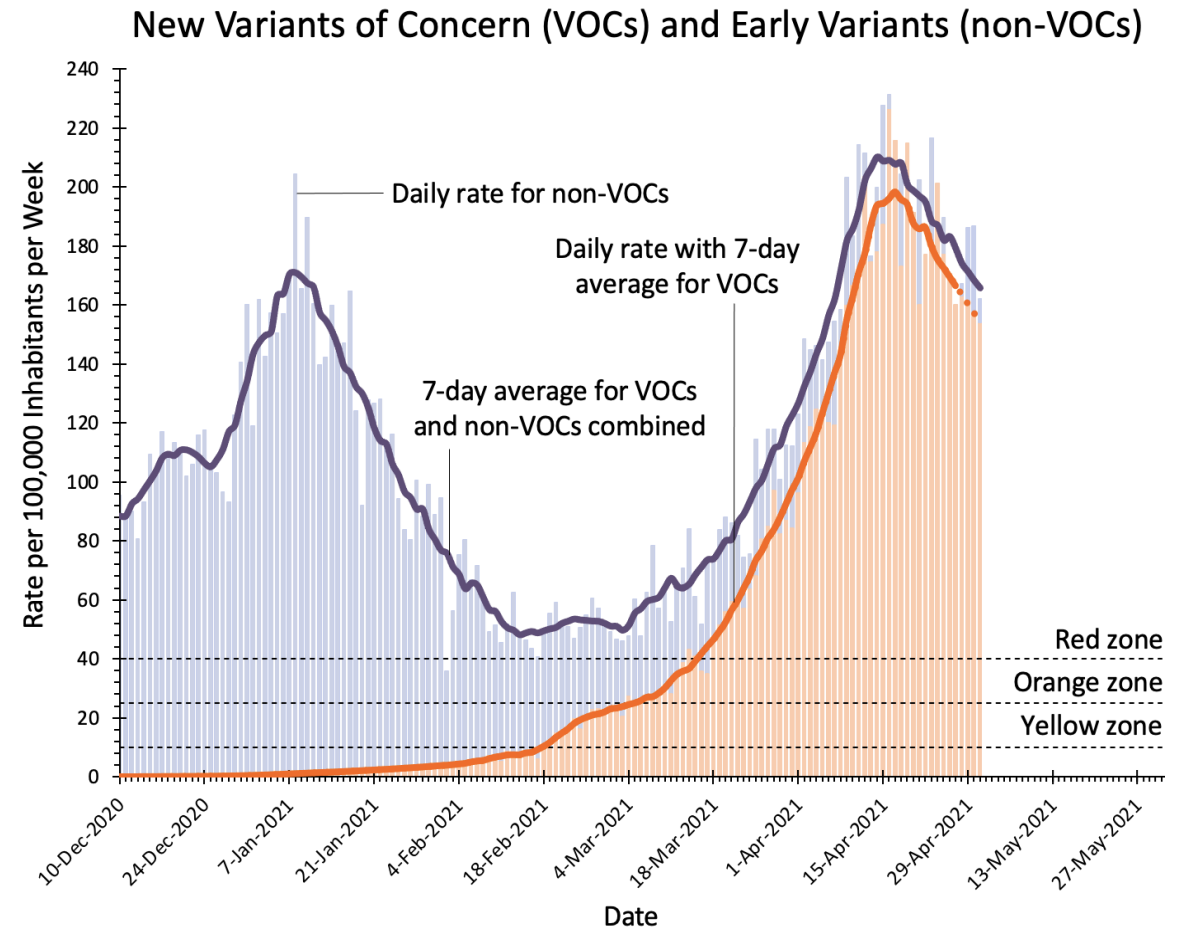

&

- People with health conditions such as heart disease, asthma, diabetes, high blood pressure, hepatitis B or C and HIV
- It is also safe for people on blood thinners, with a weakened immune system, auto-immune disorder and anytime during pregnancy.

Variants of Concern (VOC)

- Different variants are now in Ontario and Toronto.
- They spread infection more easily and cause more serious disease
- Public health measures and vaccines work against variants

Vaccines and the Variants

VACCINES OFFER PROTECTION AGAINST NEW VARIANTS

Vaccines have been used successfully in countries with variants

Vaccines can provide protection even when viruses change

Protection offered by vaccines is important as variants can spread more easily

Booster doses may be used in the future for specific variants

How the COVID-19 vaccines work...

The COVID-19 vaccines works by telling our body to make “*spike proteins*”, a protein specifically found on the surface of the coronavirus. These proteins will stimulate our body to start making antibodies against COVID-19.

- **Pfizer BioNTech and Moderna** use mRNA technology.
 - mRNA research and technology has been around for over 10 years.
 - Breaks down and is removed from body in days
- **AstraZeneca/COVISHIELD and Janssen (Johnson & Johnson)** use a viral vector.
 - A cold virus that is inactivated (adenovirus), has instructions to make the spike protein in it.

What Is In The Vaccines?

WHAT IS IN THE COVID-19 VACCINES?

The vaccines contain instructions to have your body make antibodies

The vaccines contain lipids, salts, sugars and buffers

They do not contain eggs, gelatin, preservatives, latex or antibiotics

There is no COVID-19 virus in the vaccine that can give you COVID-19

What If I Have Allergies?

Pfizer-BioNTech & Moderna: **Polyethylene glycol**, also found in:

- laxatives or products for colonoscopy, cough syrup, ultrasound gel
- cosmetics, skin creams,
- shampoos, toothpastes, hair products, contact lenses & solutions,
- some fast foods, baked goods

Moderna vaccine: **Tromethamine**, also found in:

- contrast media for CT scans / MRI, some medications, skin creams

AstraZeneca/COVISHIELD & Janssen vaccines: **Polysorbate 80**, also found in:

- processed food, pickles, ice cream, whipped cream, gelatin, shortening, chewing gum,
- cosmetic, soaps, creams, body butter, bath gels, shampoo, mouthwash,
- eye drops, vitamin supplements, heart medication, contraceptives

Will The Vaccine Make Me Sick?

WILL THE VACCINE MAKE ME SICK?

There is no COVID-19 virus in the vaccine that can make us sick

Most side-effects are mild & will go away after a few days

Severe allergic reactions are rare and are treated right away

Talk to your doctor if your symptoms don't go away after 3 days

Vaccine side effects

- Most vaccine side effects are mild and similar to the flu shot, lasting 1 to 3 days:
 - pain, redness & swelling where the needle is given
 - headache, feeling tired, muscle ache, joint pain
 - fever, chills, nausea or vomiting
 - swelling & tenderness under the armpit / enlarged lymph nodes
- Side effects are more common after the 2nd dose
- Stay at the clinic for 15 minutes after vaccination, so you can be monitored, and treated, for any reactions

Blood Clots and Low Blood Platelet Count

- There have been reports of this rare event after receiving either the AstraZeneca (1/50,000) or Johnson & Johnson vaccine (1/500,000)
- Blood clots can occur in the brain, arms/legs or abdomen
- With proper medical care, can be treated
- **Vaccination has been paused as of May 12, 2021.**
- Watch for any side effects following vaccination on days 4 to 28. Call 911 if you have:
 - Trouble breathing, chest pain, leg or abdominal pain that does not go away
 - Sudden severe headache, blurred vision, skin bruising or spots

COVID-19 Variants Can Be Serious In Pregnancy

- Book an appointment at any time in pregnancy
- Vaccination during pregnancy and breastfeeding can protect the pregnant person and baby.
- Over 110,000 pregnant women have been involved in COVID-19 safety registry in the United States. Some have delivered with no safety concerns identified.

GET THE COVID-19 VACCINE IF YOU ARE PREGNANT

In pregnancy, COVID-19 infection can be more serious

COVID-19 vaccines can protect you from serious illness

Antibodies can transfer to the baby, protecting them as well

COVID-19 vaccines are safe in pregnancy & are being used around the world

Talk to your health care provider if you have questions

- Pfizer vaccine approved for use in children 12+ in Canada on May 5, 2021.
- Vaccination of children 12-17, in Ontario, will begin once vaccine supply allows - dates and details to come!
- Vaccination is not mandatory.
- The best way to protect children is:
 - to keep following public health guidelines, and
 - for adults to be vaccinated as soon as they can

Do I need the vaccine, if I already had COVID-19?

A: Yes. Based on the latest scientific evidence, natural immunity from COVID-19 may not last long. It is possible to get re-infected after a previous COVID-19 infection.

toronto.ca/COVID19

Which COVID-19 Vaccine Is Best For Me?

WHICH COVID-19 VACCINE IS BETTER FOR ME?

All the approved vaccines are safe and effective

All the vaccines will protect you from serious illness

Get vaccinated as soon as you are eligible

Vaccinating more people will reduce the spread of COVID-19

Phase 2 of Vaccine Rollout

Eligibility group	Week of April 26	Week of May 3	Week of May 10	Week of May 17	Week of May 24
Provincial age band	April 30: 55 and older	50 and older	40 and older	30 and older	18 and older
Hotspot age band	April 27: 45 and older	18 and older	-	-	-
Health conditions	Highest-risk health conditions continues	High-risk health conditions	At-risk health conditions	-	-
Cannot work from home	April 29: licensed childcare workers	Group 1	Group 2	-	-

4 Vaccines Approved In Canada

For 12-18 years
& older, including seniors

Real world effectiveness

2 dose schedule, except for
Janssen

Name	Technology	Available in Ontario	Dose schedule
Pfizer BioNTech	mRNA	12 years +	2 doses
Moderna	mRNA	18 years +	2 doses
AstraZeneca/ COVISHIELD	viral vector	1st dose paused until further notice	2 doses
Janssen	viral vector	30 years +	1 dose

Pfizer/BioNTech Vaccine in Highest Supply for May/June in Ontario

- Ontario is expecting an average of 800,000 Pfizer doses per week for the month of May. Also some Moderna.
- 140,000,000 doses of Pfizer vaccine administered in the USA so far. No safety signals.
- Works well, even with variants.
- Current vaccine being offered at the City of Toronto's mass immunization clinics, and most other clinics.

Second Dose Extended But Still Necessary

WHY IS THE 2ND VACCINE DOSE EXTENDED TO 4 MONTHS?

Data shows the first dose provides strong protection

Extending the 2nd dose allows us to vaccinate more people

Vaccinating more people will reduce the spread of COVID-19

Vaccines can provide protection against COVID-19 variants

toronto.ca/COVID19

Protection is 80% after 1 dose of mRNA vaccine and 90% after the 2nd dose.

WHAT IS HERD IMMUNITY?

Herd immunity protects our community from infection when many people are vaccinated.

It is another way to protect others by reducing COVID-19 spread.

It also protects people who can't get vaccinated like newborn babies.

Until we have herd immunity, we need to wear our mask & keep a distance from people we don't live with.

Goal of 40% of Toronto residents 18+ reached ahead of schedule. Next goal is 65% by May 31

Provincial goal to vaccinate 40% of adult residents was achieved on May 1st

Doses administered over time

At the current rates of vaccination, we are on track to exceed the 65% goal by end of May

Ways To Get Vaccinated

Red & white or no health card?
Register using telephone #

City clinics <https://covid-19.ontario.ca/book-vaccine/>
Or call: 1-888-999-6488
(TTY 1-866-797-0007)

Hospital clinics www.vaccineto.ca
Or call: 1-888-385-1910

Visit <https://covid-19.ontario.ca/book-vaccine/> to find a **pharmacy**
Or call your local pharmacy / website

Mobile & pop-up clinics
Host organizations will promote clinics directly to the target community

RESIDENTS WITHOUT OHIP CARDS

Residents without an OHIP card may use other forms of identification to book a COVID-19 vaccination appointment through agency partners.

Public Health Measures

Vaccines are **one** of many tools we have to fight the COVID-19 pandemic. It will take time before we have enough vaccine to get everyone vaccinated.

For now, we still need to wear a mask, keep our distance and wash our hands frequently.

Mental Health Support during COVID-19

It's okay not to feel okay. Many people may feel sad, worried, scared, confused or angry during COVID-19. These are normal and common responses to unexpected or stressful situations.

Stay connected. Play a virtual game, check in on a neighbour, have a video conference.

Be active & take care of yourself. Exercise, eat well, get enough sleep.

Take time to engage virtually or by phone with friends, family or loved ones.

Learn something new. Try a new hobby or take an online course.

Help someone else. Doing good can feel good.

Reach out for help. Talk to someone you trust or seek professional support.

TOGETHER, WE CAN GET OUT OF THE 3RD WAVE

**Take care of
your physical
& mental
wellbeing.**

**Stay home
except for
essential reasons
& exercise.**

**Gather only with
members of
your household.**

**Keep your
distance, wear
your mask, wash
your hands.**

**Get the
COVID-19
vaccine when it is
available to you.**

How vaccines were developed so fast?

- Scientists & researchers around the world sharing data
- Building on existing research & technology
- Large scale funding allowed for multiple testing and large clinical trials
- Over 280 vaccine products were tested
- All vaccines approved by Health Canada still had to meet all safety, efficacy and quality standards

What to expect after receiving your 1st dose of the COVID-19 vaccine

You may experience mild side effects that go away in 1-3 days

It takes 2 weeks after each dose for the vaccine to take effect

The clinic where you received your 1st dose will make your 2nd dose appointment

Keep your distance, wear a mask and wash your hands until more people are vaccinated

Need help getting to a city-run clinic for your vaccination appointment?

If you cannot drive yourself or take transit, ask family or friends

If ride sharing, sit in the back seat with the windows open & wear a mask

If you cannot access or afford transportation you may be eligible for supports

Plan ahead - find more information, maps and pictures of city-run clinics at toronto.ca/COVID19
