

Shelter Harm Reduction and Overdose Preparedness Assessment

Site and Assessment Team Details

Date:			
Site Name and Operator:			
Site Address:			
Assessment Team:			
Site Representative(s):			
Resident Representative(s):			
Harm Reduction Sector Representative(s):			
Site Basics:			
Site type: ☐ Traditional Shelter ☐ Respite ☐ Shelter Hotel ☐ Supportive Housing			
Number of residents: Number of beds: OR Number of rooms/units:			
Gender(s) served (including proportions)			
Priority population group(s) (eg. Indigenous, youth, 2+SLGBTQ):			
Staff positions on site:			
Organizational Policies & Protocols			
Organizational policies or protocols include:			
\square A commitment to a harm reduction approach to drug use			
$\hfill\Box$ The requirement for all client service staff to employ a harm reduction approach to drug use			
□ A commitment to destigmatizing drug use – example:			
\square Non-punitive responses to drug use onsite			
□ Protections from discharge on basis of drug use and/or drug selling (in and of itself)			
☐ Clear directive for not engaging CAS on basis of drug use alone (if applicable)			
☐ Clear directive for police non-engagement related to drug use alone			
☐ A client-led wellness check system that respects client autonomy and privacy (while balancing safety concerns)			
\square An overdose response and naloxone administration directive, covering inside and outside incidents			
□ Other:			
Client INITIAL intake protocol includes at minimum, UNIVERSAL orientation to the site's:			
\square Harm reduction policy and programming, including overdose preparation and prevention services			
☐ Non-punitive response to drug use on site (primacy of support and care)			
\square Safer drug use supply availability (\square Supplies are available at intake)			
\square Naloxone availability (\square Naloxone is offered to all clients at initial intake)			
☐ Wellness check protocols			

Developed by: The Toronto Hotel Overdose Action Task Force Version Date: May 2021

Secondar	y intake protocol includes suppor	tive discussions about:	1	
□ Individu	al overdose preparation/planning			
☐ Organiza	\Box Organizational policies on CAS protocols (if applicable) and police engagement related to drug use			
□ Processe	es for resident participation in site act	ivities, job or volunteer o	opportunities	
□ Feedbac	k and complaints mechanism			
☐ The role	\Box The role of security staff on site			
□ Emerge	□ Emergency contact information (document next of kin)			
☐ How to	support continued access to services:	harm reduction, health	care providers/pres	cribers, employment, etc.
Notes:				
Harm Re	duction Operational Requiremen	ts		
The organ	nization has consistent access to a	nd systems in place to	manage:	
□ Safer dr	ug use supply distribution			
□ Naloxon	e distribution			
☐ Biohazaı	rdous waste/sharps disposal			
☐ Overdos Strategies)	e response and naloxone administrat	ion (see section below: Ov	erdose Prevention, Pr	reparedness and Response
Safer drug	g use supplies are available to clie	nts:		
□ 24/7	☐ barrier free (eg. self-serve stations) ☐ through designate	d residents/peers	☐ through all staff
□ through	visiting service providers			
Naloxone	is available to clients:			
□ 24/7	\square barrier free (eg. self-serve stations) ☐ through designate	d residents/peers	☐ through all staff
□ through	visiting service providers			
The follow	ving involvement opportunities a	re in place for people v	who use drugs:	
□ Residen	t harm reduction and/or overdose pro	evention advisory commi	ttee	
☐ Paid pos	sitions that utilize their drug culture e	xpertise and offer furthe	r skill development	
□ Volunte	er positions			
☐ Consulta	ation about site harm reduction, over	dose prevention, and ove	erdose preparednes	s initiatives
□ Training	and education in harm reduction and	d overdose response		
The follow	ving referral pathways for harm re	eduction care are esta	blished:	
□ Local/ac	cessible harm reduction program	☐ OAT prescriber	☐ Safer Supply pre	escriber
□ Commu	nity Health Centre	☐ Local pharmacy	□ Other:	

Developed by: The Toronto Hotel Overdose Action Task Force Version Date: May 2021

Notes:

Overdose Prevention, Preparedness and Response Strategies

Up-to-Date overdose-related policie	es and procedures specifying:	
\square The established protocol for overdose	e responses onsite (inside and outside)	
\square Staff expectations for engaging in clie	nt-centred overdose prevention and pro	eparedness practices-
\square ongoing collaboration with cl	ients to assess their overdose risk	
to do post-drug use wellness ch	re safely in their rooms or elsewhere one ecks, use overdose prevention phone line ed in overdose prevention, recognition	nes or app-based spotting)
☐ Frequency of staff overdose refresher	training and simulation participation (v	with tracking mechanism)
☐ Regular and systematic quality assura	nce checks of all onsite naloxone and re	elated PPE
☐ Directives for frequent and systemati	c monitoring of communal and secluded	d locations onsite (including outside)
☐ Requirements for staff debriefing and	l offering client support following an ove	erdose
☐ Post-overdose incident responsibilitie documentation, overdose reporting, sta	•	h, restocking naloxone and PPE,
Routinization of overdose prevention	on, preparedness and response	
☐ Establish overdose prevention and pr	eparedness as a standing item at all site	e meetings
potent drug circulation), and staff overc	ed support, emerging conditions introdu	rom previous shift, identifying clients icing new or increased overdose risk (eg.
Physical space assessment		
☐ Conduct initial and recurring site safe		-
☐ Devise harm reduction-orientated straccess naloxone such as communal bath		g use (eg. identify locations for quick-
Location	Risk(s) identified	Safety Strategies
Overdose response stations		
☐ Create self-serve naloxone stations, the	hat include: naloxone kits, medical glove	es in various sizes disposable surgical
masks, hand sanitizer, large posters of o		23 III various sizes, aisposable sargical
In-room interventions (hotel room a	and single unit spaces)	
☐ Ensure private client dwellings have c	pperational telephone with room-to-roo	m and external outgoing functionality
☐ Display 911 call directions close to or	on phone	
☐ Display overdose response protocol p	ooster	
☐ Promote overdose prevention service	es: naloxone, peer witnessing, staff post	-drug use wellness checks, National
Overdose Response Service, Safer Use S	support Line, BeSafe App, onsite/local su	upervised consumption services

Programmatic interventions (onsite)
☐ Onsite overdose prevention site/supervised consumption service
☐ Peer witnessing program (phone and/or in-person)
☐ Staff witnessing program (phone and/or in-person)
Overdose awareness and education (client trainings, posters, flyers, discussions)
☐ Display overdose response protocol posters in communal spaces
☐ Promote naloxone availability
☐ Display overdose prevention line promotional materials
☐ Promote onsite overdose prevention services
☐ Offer and promote overdose training
Notes:
Staff Training
Staff Training All site staff are trained in:
ALL site staff are trained in:
ALL site staff are trained in:
ALL site staff are trained in: □ Expectations for engaging with people who use drugs (respect, non-discrimination, trauma-informed) □ Overdose recognition and response (including dispatching back up, and as appropriate, naloxone administration)
ALL site staff are trained in:
ALL site staff are trained in: □ Expectations for engaging with people who use drugs (respect, non-discrimination, trauma-informed) □ Overdose recognition and response (including dispatching back up, and as appropriate, naloxone administration)
ALL site staff are trained in: □ Expectations for engaging with people who use drugs (respect, non-discrimination, trauma-informed) □ Overdose recognition and response (including dispatching back up, and as appropriate, naloxone administration) □ Safer sharps handling
ALL site staff are trained in: Expectations for engaging with people who use drugs (respect, non-discrimination, trauma-informed) Overdose recognition and response (including dispatching back up, and as appropriate, naloxone administration) Safer sharps handling In addition to the above, client service staff are trained in:
ALL site staff are trained in: Expectations for engaging with people who use drugs (respect, non-discrimination, trauma-informed) Overdose recognition and response (including dispatching back up, and as appropriate, naloxone administration) Safer sharps handling In addition to the above, client service staff are trained in: CPR
ALL site staff are trained in: Expectations for engaging with people who use drugs (respect, non-discrimination, trauma-informed) Overdose recognition and response (including dispatching back up, and as appropriate, naloxone administration) Safer sharps handling In addition to the above, client service staff are trained in: CPR Overdose recognition and response skills training/simulation
ALL site staff are trained in: Expectations for engaging with people who use drugs (respect, non-discrimination, trauma-informed) Overdose recognition and response (including dispatching back up, and as appropriate, naloxone administration) Safer sharps handling In addition to the above, client service staff are trained in: CPR Overdose recognition and response skills training/simulation Overdose prevention and client safety planning
ALL site staff are trained in: Expectations for engaging with people who use drugs (respect, non-discrimination, trauma-informed) Overdose recognition and response (including dispatching back up, and as appropriate, naloxone administration) Safer sharps handling In addition to the above, client service staff are trained in: CPR Overdose recognition and response skills training/simulation Overdose prevention and client safety planning "Harm Reduction 101" (history, philosophy & science, anti-stigma, drugs, drug use, impacts of drug use)
ALL site staff are trained in: Expectations for engaging with people who use drugs (respect, non-discrimination, trauma-informed) Overdose recognition and response (including dispatching back up, and as appropriate, naloxone administration) Safer sharps handling In addition to the above, client service staff are trained in: CPR Overdose recognition and response skills training/simulation Overdose prevention and client safety planning "Harm Reduction 101" (history, philosophy & science, anti-stigma, drugs, drug use, impacts of drug use) Harm Reduction Supplies, naloxone distribution & best practices

Assessment Team Reflections

Appendix A: Overdose Risk Audit Procedure

Step	Action		Deliverable
1	Schedule site visit for overdose audit with	•	review of goals of audit, participants (including recruitment of
	site operator		site resident), and process
	Identify site's specific physical space and	•	An inventory of risk areas (including site locations, policies,
2	organizational vulnerabilities to overdose		procedures, staffing, staff skill, etc.)
-	risk and their potential for precipitating		
	overdose death (ie. "risk areas.")		
3	Rank overdose risk areas by priority.	•	Prioritized list for action planning
	Determine overdose risk elimination and	•	A record recommended risk elimination and control measures
4	control measures.	•	Adequacy (acceptable, feasible) of risk elimination and control
			measures
5	Eliminate the risk or implement risk controls.	•	Site operator and Task Force implement controls that
3			functioning appropriately
6	Measure the effectiveness of controls.	•	Monitor through follow up to confirm controls continue to
0			function.
7	Make changes to improve continuously.	•	Site Operators continuously monitor for improvements.

(Adapted from: Canadian Centre for Occupational Health & Safety, Sample Risk Assessment Form)

Appendix B: Good Practices for Assessment Teams

- Review the objectives, process and confidentiality with all participants before starting the audit
- Get an overview of the space layout and resident access areas from the site operator prior to doing a walk-about.
- Take a photos or video during the audit if possible and note the location where it was taken.
- Take notes or use photos and video to document positive features as well as problem areas.
- Keep notes on the improvement ideas generated during the audit to help develop recommendations
- Talk to people you meet during the audit- introduce yourself; tell them what you are doing and ask for their thoughts; consider asking whether they have had any bad experiences, and what changes they'd like to see.
- On the Hotel Overdose Risk Audit Tool, record very accurate details and very specific location information for each location or feature.
- Hold an audit team meeting onsite, immediately following the audit- review the findings and (further) develop recommendations.
- Ensure all recommendations are clear and assigned for accountability and follow up.
- Develop concrete plans for action steps and follow up.
