

I ALREADY HAD COVID-19, SHOULD I GET A BIVALENT BOOSTER?

Yes, it will give hybrid immunity* which gives stronger protection vs an infection alone

It boosts your immunity & gives better protection that may have decreased since your last COVID-19 dose or infection

It's safe & recommended for everyone 5+, especially people at higher risk of getting very sick

If you haven't received a fall booster, get a booster 3 to 6 months after your last COVID-19 dose or infection for the best protection

*protection from both COVID-19 vaccination & infection
