

The City of Toronto holds public consultations as one way to engage residents in the life of their city. We invite you to get involved.

## Basement Flooding Remediation and Water Quality Improvement Master Plan

Class Environmental Assessment – Study Areas 42, 44 & 62  
(roughly bounded by Keele Street, St Clair Avenue, DVP and Lake Ontario)

### Notice of Study Commencement

#### Study Overview

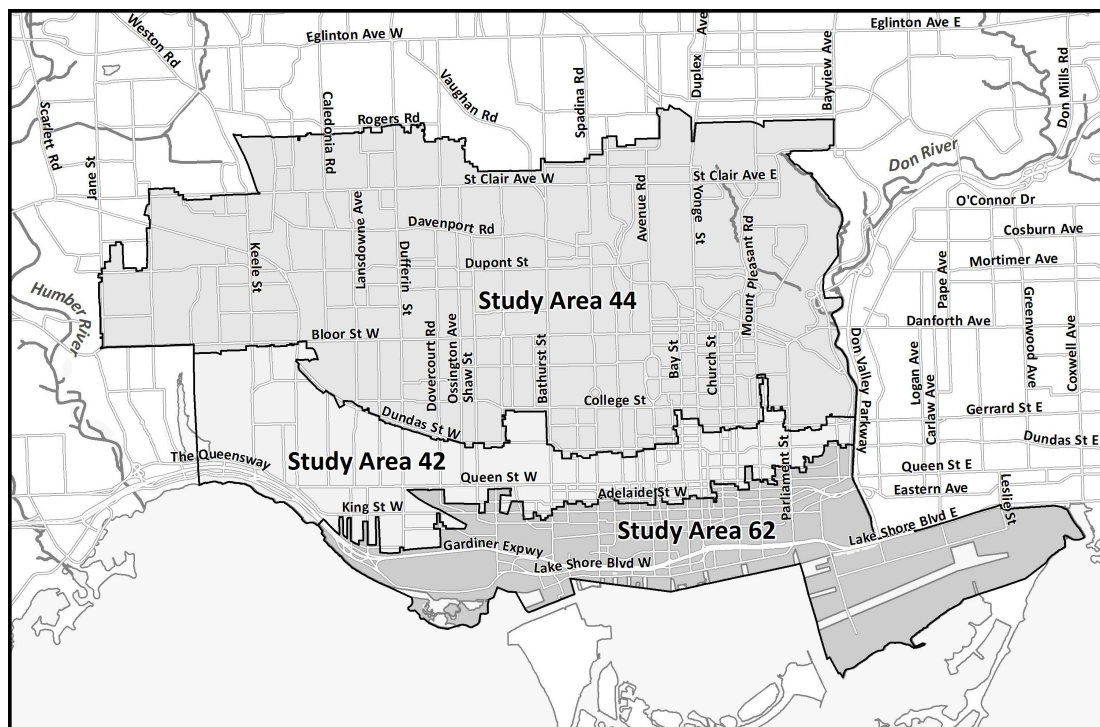

The City of Toronto has initiated several Class Environmental Assessment (EA) studies to identify causes of flooding and develop solutions to reduce the risk of future surface and basement flooding, as well as, improve stormwater quality before it is discharged to watercourses.

Study Areas 44, 44 & 62, located within the St Clair Avenue, Keele Street, DVP area, has experienced basement and surface flooding during extreme storms in the past. In response, the City of Toronto has initiated these EA studies to address flooding that originates within the City's property such as roads and sewer infrastructure (public property), as well as, to identify solutions for stormwater quality improvement in the area.

#### The Process

These studies are being planned as a Master Plan in accordance with the Municipal Class Environmental Assessment process and will result in a series of recommended basement flooding remediation and water quality improvement projects. The Master Plans will define the problem, consider and evaluate alternative solutions, assess impacts of the preferred solutions and identify measures to lessen any adverse impacts.

Issue Date: July 11, 2019

#### Public Consultation

Various Public Information Centres (PICs) are planned for these Study Areas in the coming years. City staff and the consulting team will be present to answer questions and discuss the next steps in the process. Notification of the PICs will be advertised in the local community newspaper and invitation mailed to residents within the study area.
