Watermain Replacement, Sidewalk Installation, and Road Resurfacing on Carpenter Road from Steeles Avenue West to Bathurst Street

Contract: 23ECS-LU-01SU Start Date: April 17, 2023 End Date: November 2023 *Timeline is subject to change.

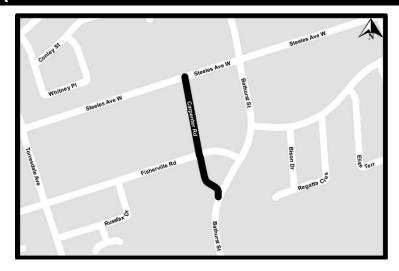

The City of Toronto plans to replace the watermain and the City-owned portion of substandard water services on Carpenter Road from Steeles Avenue West to Bathurst Street. The City is also planning to install new sidewalks on Carpenter Road from Bathurst Street to Fisherville Road. Sidewalks are a critical piece of transportation infrastructure which provide accessibility and safety for all, including vulnerable road users. Our data shows that sidewalk is missing on one side of the road or is a width that does not meet current City standards.

The water service is the underground pipe that brings water to your water meter and is owned by you and by the City. The part you own is from your house to the end of your property, the part the City owns is from the end of your property to the watermain. This project is part of the Council-approved 2023 Capital Works Program to renew our aging infrastructure, improve water distribution and reduce the risk of watermain breaks.

IMPORTANT INFORMATION ABOUT LEAD WATER SERVICES

If you live on Carpenter Road in a house that was built before the mid-1950s, your water service may be made of lead. Please read the attached fact sheet with important information about the risks of lead in drinking water, especially if someone in your house is pregnant, there are children under six years old, or there is an infant drinking formula made using tap water.

MAP OF WORK AREA

WORK DETAILS

The City's contractor will:

- · excavate the road and dig a trench to access and install the new watermain
- replace any City-owned water service pipes that do not meet City standards from the watermain to the private property line
- · resurface the road

WHAT TO EXPECT DURING CONSTRUCTION

- You may experience dust, noise and other inconveniences. The City will make efforts to reduce the impacts. We appreciate your patience.
- The City will not be responsible for damage to any privately owned items on City property.
- Work in the boulevard in front of homes and commercial properties is expected. This work
 includes removing and replacing driveways, municipal sidewalks and grassed boulevards, where
 necessary.

Work Hours: Work will take place from 7 a.m.to 7 p.m., Monday to Friday, with work after hours and on weekends as required.

Pre-Construction Inspection: OZA Inspections Ltd., under contract to the City of Toronto, will survey all properties within 30 metres of the construction area before construction starts. The inspection will look at the interior and exterior of all properties to verify existing conditions. Although participation is voluntary, the City encourages all homeowners to participate. Without the survey, it will be difficult to confirm any claims of damage caused by construction.

Affected properties will receive a separate notice to set up an appointment. All inspection staff will wear photo I.D. and carry photo equipment for this work.

On-Site Communication: There are times when contractors need to communicate with homeowners about what is happening on-site. This could be about driveway access, water shut offs, pre-construction inspections, and site restoration work (landscaping, installing pavers etc.). Contractor's staff will be identifiable by their high-visibility company branded clothing and will follow relevant COVID protocols. If you need to speak with staff on the construction site, please ask for the Site Inspector and follow public health directions for reducing the spread of COVID-19 during in-person communication.

Important information for owners of sprinkler systems / heated driveways and private landscaping features. Property owners should remove items located within City property limits (boulevard) to avoid damage.

This includes items such as landscaping (plants and pavers), decorative objects, sprinkler systems or heated driveways. If you have a sprinkler system or heated driveway, please contact the **Field Ambassador** listed below.

Telephone and Internet Services: This work may affect phone and internet cables for individual properties that aren't buried deep below the sidewalk. The contractor will coordinate with utility companies to minimize disruption. Residents who find their service has been disrupted should contact the **Field Ambassador and** notify their phone or internet service provider.

Water Service Disruptions: From time-to-time, the water supply to your property will be shut-off to complete construction; the contractor will provide notice at least 24-hours in advance. Throughout the work, it is recommended that you temporarily disconnect any water treatment systems (i.e. softeners or filters), water-cooled air conditioners or similar plumbing fixtures. Automatic lawn sprinkler systems may also be affected, therefore, you may need to water manually. In the event you did not receive advance notice, the City may have needed to use an *emergency water shut off* to complete work.

Substandard Water Service Replacement: Please take the time to read the attached fact sheet carefully as it contains important information on lead in drinking water and how to prepare for replacement. If you want to replace the private portion-of the water service pipe, the City of Toronto recommends that you obtain several quotes before selecting a contractor. **PLEASE NOTE:** The City is not able to get involved in any contract to have work done on private property. Property owners are responsible for ensuring contractors do not interfere with the work being done on City property. Learn more at www.toronto.ca/leadpipes.

Road and Sidewalk Access: In order to complete the work in a safe manner, there will be road and sidewalk restrictions within the work zone. Access for emergency vehicles will be maintained at all times.

Driveway Access: The contractor will notify you of any temporary restrictions to your driveway access. If your property has two entrances, one entrance will be kept open at all times.

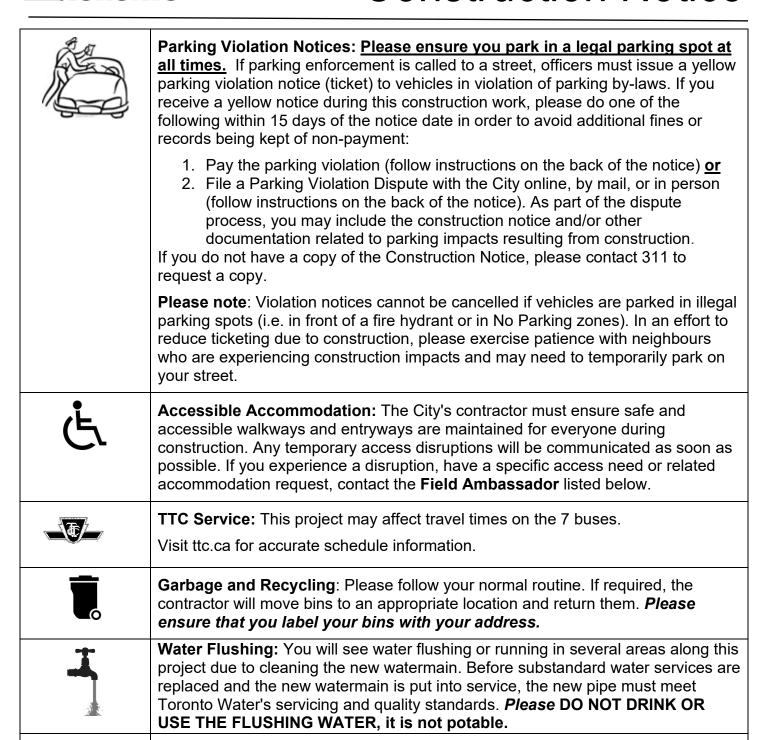

Traffic Management: Road users should expect delays and increased traffic on nearby streets. Motorists are reminded that bicycles and cars will be sharing the lane. When driving, please be mindful of vulnerable road users.

Traffic on Carpenter Road may be reduced to one lane.

Parking: This project will affect on-street parking. Parking in the active work zone is not permitted as space is needed for construction equipment and materials. If your parked vehicle affects construction work, it will be relocated with no charge to the owner. Please call 416-808-2222 for its location.

Restoration: The construction work area will be restored with sod, concrete and/or asphalt where required. Interlocking bricks, flagstone on a granular base, or other similar features that are removed from public and private property during construction will be replaced. Lawn seeding and/or laying of sod will be done as needed during ideal growing seasons only - April to June and September to October.

NEED MORE INFORMATION?

If you have questions about this construction project, please contact staff listed below, if you need to speak with staff on the construction site – please ask for the site inspector, respect physical distancing and wear a mask.

Thank you for your patience. Building a great city takes time. Better infrastructure for all of us is worth the wait.

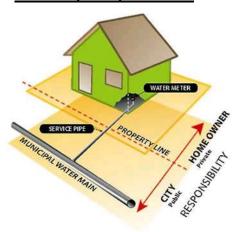

Lead in Drinking Water

The City of Toronto is sending you two notices to tell you about construction the City will be doing near your home soon. The first one is called a "Pre-Construction Notice" and it is sent about 3 months before the work begins. The second one is called a "Construction Notice" and it is sent 1-4 weeks before the work begins. You should have one of these notices in your mailbox today.

The construction could involve work on your road, watermain or sewer. It <u>may</u> also involve replacing the City-owned part of your water service pipe, which <u>may</u> contain lead.

Lead can affect how the brain and nervous system grows, so this factsheet is very important to read if someone in your house is pregnant, if there are children under 6 years old, or if there is an infant drinking formula made from tap water.

Water Pipe Replacement

The underground pipe that brings water to your water meter (called the service pipe) is owned by you <u>and</u> by the City. The part that the City owns goes from the municipal watermain to your property line. The part that you own goes from your property line to your water meter.

During construction, if the City finds that the water pipe is made of lead, it will replace the City-owned part. **Toronto Public Health strongly recommends you replace your part of the water pipe if it contains lead.** With only a partial lead pipe replacement, there may be a temporary increase of lead in your drinking water. The best way to reduce lead is to replace both the City-owned and private side of a lead water pipe. Find out how by reading the back of this Fact Sheet.

Lead, Drinking Water and Your Health

- If you live in a property (storefront, office building or house) built before the mid-1950s and the water service pipe has never been replaced, it is probably made of lead. If it is, then lead may be getting into your drinking water. Apartment and other buildings with more than six units do not have lead pipes.
- Lead is most harmful to the growing brain and nervous system of a fetus, infant or child under 6 years old. If a young child has too much lead in their body, it can lead to a shortened attention span, and intellectual and behavioural problems.
- If you have a baby at home and are breastfeeding, continue to breastfeed your baby. The amount of lead in breast milk is much lower than in tap water

and is healthy for your baby to drink. If you are feeding your baby formula, use cold filtered tap water, boil it and then let it cool. Use within 30 minutes. Until you have a filter, consider using bottled water for making baby formula, or ready-to-feed formula.

How to prepare for lead water pipe replacement

Once construction begins, the contractor will be able to see the underground water pipe and will know for sure if the City-owned portion is made of lead and needs to be replaced. A City staff person or City-hired contractor will tell you in person or leave a note in your mailbox if they are replacing the service to your property. In the meantime, you can take steps to prepare for the possible replacement.

Step 1: Find out if your part of the water pipe is made of lead.

- If your house was built before the mid-1950s, then the water service pipe is probably made of lead, unless it was replaced at another time. You can find out how old your house is by asking the landlord or checking the ownership papers.
- If possible, look at the pipe that goes into your water meter. If it is grey, scratches easily and does not sound hollow when you tap it, it may be made of lead. To know for sure, ask a plumber or home inspector.

Step 2: Find a contractor to replace your part of the water pipe.

- Get at least three quotes from a licensed plumber to get the best price. Replacing your part of the water pipe could cost approximately \$3,000 but will be dependent on the characteristics of your home.
- If you received a "Construction Notice" in your mailbox today, this means that the City will be doing the work in 1-4 weeks and has hired its own contractor. You can ask them for a quote. Look for their name and phone number in the Notice. Sometimes, the City-hired contractor may not be able to do the work for you due to their schedule. This is why it is good for you to get guotes from other contractors before work starts.
- If you hire your own contractor, they must replace your part of the water pipe either before or after the City-hired contractor replaces the City-owned part. Private contractors cannot work at the site at the same time as the City-hired contractor. Be sure that your contractor understands this and can tell you the best way for coordinating the work to save you the most money.

Step 3: Learn more about protecting your health after a lead water pipe is replaced

After a lead water pipe is replaced, there may be a temporary increase of lead in your drinking water. The City will provide you with tips and a free water filter to help reduce the health impact from any temporary lead increase.

To learn more about lead pipe replacement and other ways that the City of Toronto is working to reduce lead in drinking water, visit toronto.ca/lead or call 311.
