

There are five colours on Map 8(B) excluding the grey areas. Each of the colours covers an area that is equal to 20 percent of the geographic park planning areas of the City. The colours are used to represent the level of parkland provision in each local park planning area.

Map B shows local parkland provision across the City, indicating relative per capita provision levels. The map shows areas whose boundaries are based primarily on physical barriers relating to safe and convenient pedestrian access to parks.

Local parks are one of several park categories that comprise the public parkland within the City of Toronto. While all categories of municipal parkland make a contribution to meeting the needs of residents, access to Local parkland is important in meeting community park needs.

In its portrayal of Local parkland provision levels across the City, Map B takes into consideration the contribution of all categories of municipal parkland, as shown on Map A. It was developed as part of the Parkland Acquisition Strategic Directions Report that was endorsed by City Council in January 2002.

Map 8B: Local Parkland Provision

Published June 2025

Hectares of local parkland per 1,000 people

0 to 0.42

0.43 to 0.79

0.80 to 1.56

1.57 to 2.99

3.00 +

Areas with less than 300 people

Not to Scale
