Map of Morningside Heights Streets Plan project area.

In consultation with the local community, the City is developing a Neighbourhood Streets Plan for the Morningside Heights neighbourhood. The Streets Plan will recommend changes to traffic operations and road design to support safety and mobility for everyone using the streets. The Morningside Heights Streets Plan will investigate five main areas of improvement:

1. Road safety for vulnerable road users (e.g. pedestrians, children, older adults and people cycling)
2. Motor vehicle speeding
3. Through traffic on local streets
4. Supporting transportation options (e.g. transit, walking and cycling)
5. Curbside activity (e.g. parking, bus stops, loading zones)

Project Area

The project area is located between the Rouge River to the east, the CPR rail corridor and Morningside Avenue to the west, Steeles Avenue to the north, and a second CPR rail corridor to the south.

The City invites residents to learn more about the project and participate in identifying issues, opportunities, and ideas for the neighbourhood.

Access to the event location is wheelchair/mobility aid accessible. If you require other disability-related accommodation to participate, please contact us one week before the event.

What is a Neighbourhood Streets Plan?

Neighbourhood Streets Plans serve neighbourhoods where traffic and travel options challenge the safety and mobility of people using the streets. Through the planning process, a team of City staff work with communities to identify local issues and opportunities, collect and analyze traffic and travel demand data, and review relevant City programs and policies. The resulting Streets Plan prioritizes the greatest needs and recommends changes to traffic operations and street designs. Streets Plans consider the needs of all road users and emphasize the safety of vulnerable road users such as seniors, school children, pedestrians and people cycling.

Neighbourhood Streets Plans are subject to approval of the local Community Council. Approved changes are implemented in coordination with several City divisions to achieve efficiencies and minimize disruption from construction and roadwork. Timeline for implementation varies accordingly.

What types of changes are considered?

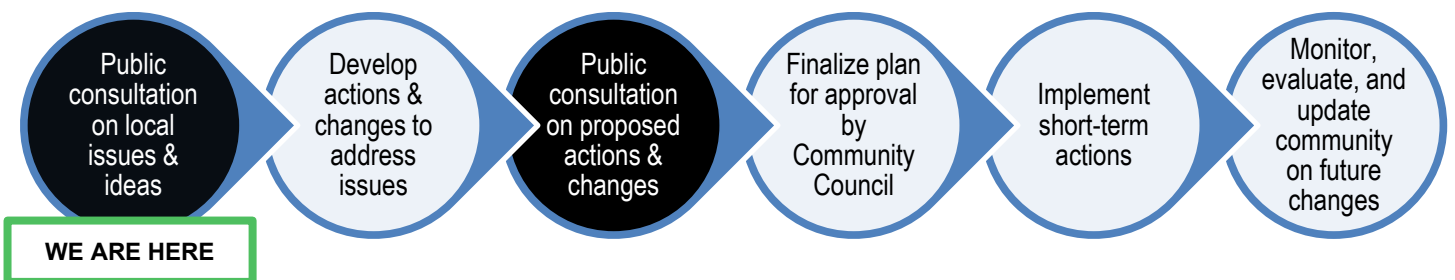

Streets Plans typically result in street improvements in the short or medium-term (6 months to 5 years) which can be made using temporary, flexible materials like signs, asphalt, paint, and bollards. Plans also identify desirable changes which are best accomplished as part of programmed road work, property development, or other major city-building projects in the future (typically 5+ years).

The outcomes of each Streets Plan are different based on local conditions and the needs of each neighbourhood. Generally, recommended actions relate to managing motor vehicle speed and volume, and reducing traffic safety conflicts. In every neighbourhood, the planning process is informed by the City's Traffic Calming Guide, Vision Zero Road Safety Plan, Complete Streets Guidelines, Congestion Management Plan, as well as the latest transit service improvement plans advanced in partnership with the Toronto Transit Commission.

How is the community involved?

Public consultation on Neighbourhood Streets Plans typically takes place in two phases. The participation of local residents and interest groups is essential to identify appropriate changes and actions for the neighbourhood. Each phase of consultation typically includes a scheduled community event, online information materials, and an online survey for self-guided participation.

Community members may also register to speak (depute) at the Community Council meeting where the final recommended version of the Neighbourhood Streets Plan is subject to debate and vote.

More Information
